EVIDENCE MANAGEMENT
RECORD EVIDENCE RECEIVED AND TRACK A COMPLETE CHAIN OF CUSTODY

SEAMLESS INTEGRATION
With the Evidence Management module, users can link evidence items to owner, property, and vehicle information already stored in an existing Spillman Flex system, eliminating duplicate entry.

COMPLETE EVIDENCE HISTORY
Users can automatically track modifications to evidence records, from the time an item is taken into custody, taken to lab analysis and court appearances, and finally, to the release or disposal of the item.

EVIDENCE REPORTING
Agencies can use the Evidence Management module to run critical evidence reports such as the Case Closed Evidence report, which shows evidence custody for completed and closed cases. The Generate Barcode List report allows users to create barcodes for any code table that has an abbreviation code and code description, and the Evidence Location Summary report shows the location of evidence including barcode ID number, evidence type, and incident number.

DETAILED EVIDENCE DATA
Agency personnel can enter detailed information into the Evidence Management screen, including property item, storage location, identification number, comments, and any activities associated with the item. Additionally, personnel can efficiently add, modify, and search for existing records within the screen.
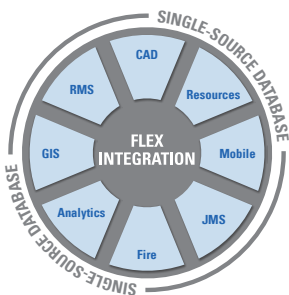

When paired with the optional Evidence Barcode & Audit Interface, agencies can manage evidence storage in minutes, saving hours of personnel time. Users can easily inventory and audit evidence using a handheld barcode reader to check data against the Evidence Management table for discrepancies in item location, allowing for simplified data entry, precise labeling, and hand-held auditing of storage locations.

FLEX

1. Personnel can enter and view evidence data, such as ID number, agency, evidence type, incident number, item number, associated images, and important status information.

2. The Evidence Management module allows users to view item and owner information, including brand, model, color, quantity, and other details, as well as owner information such as owner number, name, and date of birth.

3. Agencies can track chain of custody on items by having access to item description, comments, transaction, date, location, custodian, who from/to, and reasons for changes in custody.

TOTAL SOFTWARE INTEGRATION

Spillman Flex's Integrated Hub™ is an open, centralized database where all agency information is entered, stored, and extracted in real time, providing total software integration. This allows users to enter data once and have it automatically shared among related modules. Agencies using this module can optimize their system and enhance productivity through total integration with other Flex modules.
