

LIVESCAN FINGERPRINTING INTERFACE

AUTOMATICALLY TRANSFER INMATE DATA TO LIVESCAN SOFTWARE

ONE-TOUCH DATA TRANSFER

The LiveScan Fingerprinting Interface helps you efficiently transfer inmate data to LiveScan fingerprinting software while reducing the risk of data errors. With a single touch of the "Fingerprint" button, the inmate's name, gender, physical description, booking identification number, arresting agency, Social Security number and other data are automatically entered into the correct fields on the inmate's fingerprint card within the LiveScan software.

CUSTOMIZABLE REPORTING FEATURES

Customize the LiveScan Fingerprinting Interface to transfer any specific information your team needs on fingerprint cards in order to meet state and federal reporting requirements. The order in which data appears on the cards can also be configured to meet your agency's preferences.

DATA ACCURACY

Your jail personnel can reduce mistakes by transferring data automatically from the jail management system to your LiveScan fingerprinting software. The interface helps ensure data integrity by eliminating the need to manually re-type inmate information onto fingerprint cards.

1. Transfer inmate data to LiveScan software by clicking the “Fingerprint” button found at the top of the Arrest screen.
2. Automatically populate information from the Inmate Names Table in the correct LiveScan software fields, such as the inmate’s name, physical description, address and Social Security number.
