TraCS INTERFACE

AUTOMATICALLY IMPORT TRAFFIC AND CRIMINAL SOFTWARE (TraCS) DATA INTO FLEX

AUTOMATIC INFORMATION TRANSFER

Spillman Flex's TraCS Interface allows agencies in Wisconsin to transfer data automatically from a TraCS form directly into the appropriate accident and citation tables within Flex. Information entered either from a mobile form or from the office in TraCS will populate immediately into the Flex system.

ACCURATE AND EFFICIENT DATA ENTRY

Agencies can reduce mistakes and save valuable time by transferring data directly from their state's TraCS forms into the Flex database. By eliminating the need to manually re-type or import the data into the necessary tables, agencies will be able to save time, money, and ensure data integrity. Because this transfer is automatic, there will be no delay between entering the information in TraCS and it appearing in the Flex database.

FLEXIBLE SOLUTIONS

Users can take advantage of available state resources by using TraCS for accident and citation records and maintaining an autonomous Flex database for agency-specific purposes. Using the interface, personnel receive the benefits of using a state-provided TraCS software system and their own Flex database, providing agencies with additional flexibility in records management.
