

# CELL CHECK

## SEAMLESSLY CONDUCT INMATE CELL CHECKS AND MOVEMENTS WITH AN ANDROID APPLICATION

### SIMPLIFY INMATE MOVEMENT TRACKING

Cell Check is an Android app that runs on a purpose-built barcode scanner and allows your teams to scan an inmate's location inside the jail in addition to scanning their barcode, simplifying inmate movement tracking. Logs for cell checks and rounds are compiled in one, centralized location.

### AUTOMATICALLY CREATE LOGS

Conveniently add jail locations and bed ID barcodes to make rounds and cell checks quicker and easier to complete. Users can scan the individual bed ID barcode, record an inmate's status and upload it into a log. Cell Check helps your agency simplify the process of moving inmates and allows your corrections officers to automatically create logs for cell checks, movements and rounds.

### EASILY SWITCH OUT BARCODES

While some customers enjoy the functionality of microchip systems for inmate tracking, it can be a tedious process to install microchips at each site where rounds and cell checks are conducted. The Cell Check app utilizes barcodes instead, which can easily be switched out when needed, eliminating the hassle of implementing microchips and freeing up precious time when tracking codes need to be swapped out.

### DIRECTLY UPLOAD DATA

Your teams no longer need to store rounds and cell check information in multiple programs before uploading it into the system. Using your WiFi connection, automatically upload information from the scanner directly into your jail management system to create logs, saving valuable time and money.

1. Complete logs for cell checks, rounds and inmate movement in one, centralized location using an Android application.
2. Once rounds, cell checks or inmate movements are completed, the responsible officer can use the barcode scanner to upload data into the jail management system.
3. Officers can view the log created with data retrieved from the scanner, including location, responsible officer name and date range.
