

STATELINK

QUERY STATE AND NATIONAL DATA AND UPDATE LOCAL RECORDS

STATE AND NATIONAL DATABASE QUERIES

Agency personnel can use a single query into state, national, and other external databases to access information about wanted persons, stolen vehicles, missing persons, criminal histories, vehicle registrations, driver license information, and other critical data. Queries are sent securely and can be accessed from the StateLink request screen, from the Computer-Aided Dispatch (CAD) module, or from a record within another Spillman Flex module. State-specific transaction forms are available to meet agencies' custom needs, and users can set security privileges to regulate access.

CAD INTEGRATION

Spillman Flex's StateLink module automatically creates a CAD radio log each time a user sends a query to state, national, or other external databases. These log entries include the unit, responsible agency, time and date, and other transaction information, which can be used to easily track a particular search at a later time. Because personnel can easily search for queries directly from the CAD screen, they have access to valuable information without requiring an additional terminal.

ALERTS ON POTENTIAL DANGERS

When an officer receives a response on a wanted person or stolen vehicle, the StateLink modules sends an alert to dispatchers to warn them of a potentially dangerous situation. The alert shows up as a red-highlighted message on the CAD screen. Agency personnel can also set the alerts to pop up on other officers' screens, allowing nearby personnel to be ready in case the officer needs backup. Officers can use the voice

alert feature to listen to incoming query alerts without needing to look at their laptops.

MULTIPLE RESPONSE DESTINATIONS

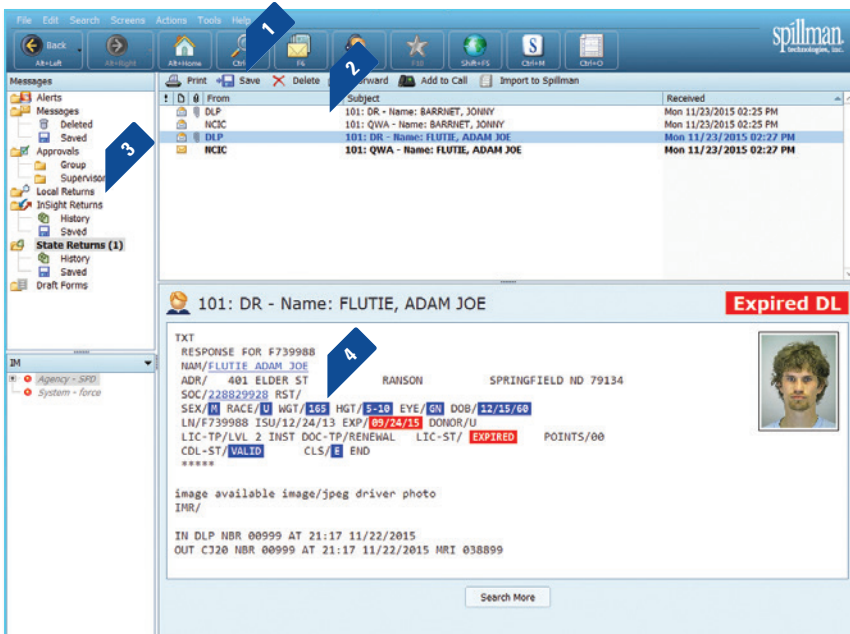

Personnel can use the StateLink module to send query and transaction responses to a printer or a group of users. Each time a transaction is submitted, the sender receives a response with the queried information. If no matching records are found, the sender will receive a notification to that effect.

MOBILE INTEGRATION

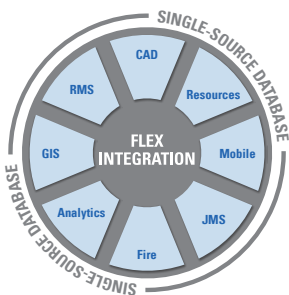

When integrated with the optional Mobile State & National Queries module, field officers can query local, state, and national databases simultaneously for instant data on names, vehicles, property, wanted persons, and available images.

FLEX

1. The StateLink module allows users to view the number of state returns in the transaction history and **save selected transactions for future reference**.
2. Users can **view the source, subject, and date received** of all returns.
3. In Flex's Mobile Message Center, personnel can quickly **view all local, state, and national query returns**.
4. StateLink users are able to **view returns in a state-specific format**, with alerts appearing in red and other points of interest in blue.

TOTAL SOFTWARE INTEGRATION

Spillman Flex's Integrated Hub™ is an open, centralized database where all agency information is entered, stored, and extracted in real time, providing total software integration. This allows users to enter data once and have it automatically shared among related modules. Agencies using this module can optimize their system and enhance productivity through total integration with other Flex modules.
