

# **GAIN AN INDEPENDENT WITNESS WITH BODY-WORN CAMERAS**

THE VB400 FOR VENUE SECURITY OFFICERS

# THE VB400 BODY-WORN CAMERA SOLUTION

## AN ESSENTIAL TECHNOLOGY FOR SAFER VENUES

When you're running a stadium, arena, zoo or museum, the safety of your staff and visitors is always at the forefront of your mind. If your venue is secure, your team can do their jobs most effectively and the public can enjoy the incredible atmosphere and experiences you've created for them.

From a safety perspective, your security professionals are your biggest assets; whether they're checking bags at the entrance, managing crowds or even protecting VIPs onstage, they're the ones keeping your visitors and venue from harm. Unfortunately, when interacting with members of the public, things can sometimes escalate - which could leave you with reputational damage, low staff morale or even lawsuits.

The VB400 body-worn camera is designed for venue safety teams who may encounter threats of abuse or violence. With its rugged exterior and shift-long recording, the VB400 provides footage of events as they occur, allowing immediate response and providing indisputable evidence.

## PROTECT YOUR STAFF AND YOUR REPUTATION

Nowadays, everyone has a mobile phone - which means, if an incident occurs between your security teams and a belligerent visitor, you may have to deal with edited footage which distorts the truth and harms your standing with the public.

Your security professionals need to know that you have their backs when they're working to keep your venue safe: by wearing body-worn cameras, your team can effectively prevent confrontations and disputes before they occur.

In addition to acting as a deterrent, our body-worn cameras can help you to coordinate a more effective response in real time by streaming live video which you can watch alongside your fixed camera footage - so you can see what's unfolding from multiple viewpoints. And, once the situation has been resolved, you can be confident that the VB400's high-quality video evidence will provide transparency and protect your security professionals from false accusations in court.

## RUGGED AND INTUITIVE DESIGN

Focus on the job and not on the weather. The toughened exterior of the VB400 resists rain, snow and dust. Tested to military standards, the result is a body-worn camera that works when you need it. The large central button and robust side switch are positioned for easy operation, even when wearing gloves.

## LONG BATTERY LIFE

With a recording time of up to 12 hours on a single charge, the VB400 enables better protection for security officers who may be working alone for extended periods of time.

## PRE / POST-RECORDING

Context is vital. With pre / post-recording enabled, capture important interactions leading up to and after the main event. Pre / post-record captures a continuous loop of audio and video, providing up to two minutes of recording ahead of and after the record function has been activated.

## HIGH QUALITY VIDEO

In instances where footage is required for evidence, the camera's wide angle, 1080p HD lens captures high-quality video from the wearer's viewpoint - providing accountability, protecting people and proving professionalism. And, with an array of accessories, security officers can attach the VB400 to any uniform or clothing.

## RESPOND TO SECURITY INCIDENTS IN REAL-TIME WITH **INTEGRATED TECHNOLOGY**

Communication between technologies is critical to facilitate a quick, collaborative response to any incident and potentially avoid unnecessary escalation. With multiple ways to connect over WiFi and Bluetooth, the VB400 enhances the safety of your security officers by bridging the gap between them and the rest of the team - enhancing situational awareness, and enabling a coordinated, smarter response.

## PEER-ASSISTED RECORDING

When a situation escalates quickly, a venue safety officer may not have a chance to hit the record button. Peer-Assisted Recording (PAR) automatically activates colleagues' VB400 cameras when they come into range of an already recording VB400, capturing multiple viewpoints of the same incident.

## LIVE STREAMING

Integrate with Avigilon Unity Video and other VMS systems, so user-activation of a body camera recording can display the camera's live video feed and send an alarm to the system operator alongside video feeds from fixed cameras. This enables safety personnel to gain complete situational awareness and respond accordingly.

## HOLSTER ACTIVATION

The Holster Aware™ Sensor enables venue safety officers to remain focused, even in the most stressful moments. Attached to holsters, it can detect whether a conducted energy weapon, baton, chemical agent, or firearm has been removed from a holster and trigger the VB400 body-worn camera to start recording.

## RADIO INTEGRATIONS

If paired with select radios over Bluetooth, the VB400 can automatically record when the user's radio enters an "emergency state", when the user presses the radio's emergency button, or when the radio's fall alert sensor detects the user is down.

## SECURELY PROCESS AND SHARE VIDEO FOOTAGE

Managing body-worn cameras doesn't have to be hard. VideoManager, deployable in the cloud or on-premises, provides the flexibility you need to efficiently store, prepare and share all of your media files - no matter their source or size - so you can free up time and focus on what matters most.

All footage captured by VB400 cameras is securely offloaded to VideoManager, and can be accessed by authorized personnel by securely logging in from any computer or tablet connected to the network. It also provides links for secure sharing with external agencies for seamless collaboration.

VideoManager provides the ability to assign user profiles, meaning granted permissions within the system can be controlled by role. For additional security, audit logs let you track every user action, ensuring traceability and transparency. Two-factor authentication protects against unauthorized user access while access control keys stop unauthorized devices from connecting to the system.

## VB400 BODY-WORN CAMERA WITHIN THE MOTOROLA SOLUTIONS ECOSYSTEM

Motorola Solutions has developed the first and only technology ecosystem that unifies voice, video, data and analytics in a single platform, enabling individuals, businesses and communities to work together in more powerful ways. We call it Safety Reimagined.

The VB400 is built into this ecosystem so you can get more out of your technology investment and keep your teams safer while they're at work. Stream body-worn footage into **Avigilon Unity Video** to see a first-person perspective alongside Avigilon's crystal clear fixed video feeds in one user interface. And be secure in the knowledge that you can capture crucial evidence without adding to your officers' workloads by triggering immediate recording when **radios** enter an emergency state.
