# FLEX CLOUD BACKUP AND RESTORE

FLEX

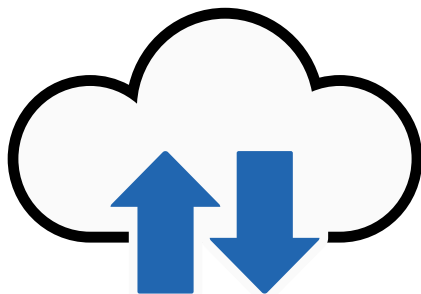

Law enforcement personnel are confronted with new challenges as they work to serve and protect each day. Trust, security, and reliability are emerging as critical standards for the way public safety utilizes technology. Throughout the country, public safety agencies are taking the necessary steps to make their organization's data storage more efficient.

Having a backup of your entire database ensures that your data is safe, even during system difficulties. However, backing up data securely offsite can be a difficult and time-consuming task. Help your agency be more efficient and free up server space by storing your database backup securely in the cloud.

Because Motorola Solutions understands the need for peace of mind and meeting security standards when it comes to storing your agency's sensitive data, we offer an automatic backup solution: Spillman Flex Cloud Backup and Restore.

## USE FLEX CLOUD BACKUP AND RESTORE TO:

- Store database backups securely offsite using the cloud
- Automatically schedule database backups to be uploaded to the cloud
- Securely transfer backup data while meeting CJIS requirements
- Store the most recent database backup
- Restore from your most recent database backup with the assistance of Flex Technical Services

BACKUP & RESTORE

Flex Cloud Backup and Restore is a cost effective and secure method for creating and storing your Flex c-tree database backup. Automatically create a backup of your Flex database and store the backup file in the cloud, which can drastically decrease the cost and effort of storing large amounts of data onsite while also improving the reliability of the information by having it stored remotely. The backup ensures that your personnel have access to any critical data in the event that something happens to the information on the Flex on-premises server. The data is stored remotely and securely using Microsoft Azure Government cloud. In order to meet the CJIS policy, the data is encrypted using TLS FIPS 140-2 encryption both in transit to and from the cloud, as well as while it is being stored.

Automatically store the most recent copy of your agency's Flex live database or other databases of your choosing grouped together, such as practice and tutor, with future releases offering multiple versions or copies of database backups. If your agency needs to restore your database using the most recent backup, the Flex Technical Services team can retrieve the file from the cloud to upload it back onto the server, and assist in restoring the data.

## WHY STORE YOUR DATABASE BACKUP IN THE CLOUD?

- Peace of mind
- Reduced costs
- Protection against Ransomware
- Enhanced security

Your agency relies on the valuable data stored in your Spillman Flex database, and Flex Cloud Backup and Restore ensures that you have access to that information in case of emergency. Using the cloud enables your agency to securely store the most recent database backup, offering peace of mind, increased efficiency, and decreased costs. For more information about enabling this feature at your agency, contact your Account Sales Representative.
