

Enterprise IT Security Monitoring

Motorola Enterprise IT Security Monitoring

You need your business systems to be secure and reliable. Day or night. No exceptions or excuses. However, security threats could strike at any time, disrupting service, causing outages and jeopardizing sensitive information. No matter how many precautions you've taken, in today's around-the-clock business world, anything less than 24/7 security monitoring puts your enterprise network — and your company's bottom line — at significant risk.

The growing convergence of information technology (IT) networks, mobile communications, and enterprise mobility solutions increases the overall number of security threats to both wired and wireless systems. The availability of business critical networks and the confidential information they contain are threatened by security incidents resulting from unauthorized access, exploited vulnerabilities, human error, malicious attacks, viruses, worms, Denial of Service (DOS) attacks, and more. A single incident could compromise operations, resulting in negative publicity, brand damage, lost revenue, legal exposure, cost of damages, and loss or compromise, or unavailability of vital business data.

Maximum Preparedness

With intruders and other malicious users constantly launching new threats and attacks, network protection requires continuous vigilance and

preparedness. Motorola's Enterprise IT Security Monitoring Services go far beyond standard security monitoring and incident response by ensuring that enterprise networks are maintained at a maximum state of preparedness.

Motorola Enterprise IT Security Monitoring is based on the implementation of a highly scalable security monitoring infrastructure that allows rapid identification of malicious network activity. Your enterprise is alerted — often before vital services are impacted or compromised.

Around-the-clock protection you can depend on

Combining powerful visualization and correlation capabilities with around-the-clock vigilance, Motorola Enterprise IT Security Monitoring quickly detects and characterizes potential threats to minimize your exposure to localized or system wide security breaches. The service also aids in appropriate response and recovery efforts designed to maintain the integrity and availability of network resources and information. Response time is tied to the level of severity of the security threat. Monthly reports summarize security event activity; performance, current and emerging security threats and Motorola recommendations surrounding security are discussed with you at regularly scheduled monthly reviews.

Depend on Motorola for 24x7 Security Monitoring

Motorola's state-of-the-art Security Operations Center (SOC) provides companies with an optimal monitoring environment, offering responsive network protection, 24 hours a day, 365 days a year. Our specialists provide additional value and protection by leveraging the threat-awareness that comes from monitoring multiple networks from coast to coast: threats are often identified long before they can reach your network and impact your business. Real-time data, prompt response, and security remediation assistance allow you to exercise greater control and ensure reliability.

Protect your enterprise networks with Motorola Enterprise IT Security Monitoring. When coupled with a Motorola Security Assessment Service to assess your current security position, you can rest assured that your security vulnerabilities are identified, remediation steps outlined and monitoring implemented. Contact your local account representative to learn more.

At-a-Glance: Motorola Enterprise IT Security Monitoring

Motorola's IT Security Monitoring Service is designed to provide the security and assurance you need to help protect your network and help ensure continuity of operations.

| What IT Security Monitoring Offers: | What it means to you: |
|---|--|
| 24 x 7 x 365 real time monitoring of network and security devices | Improved reliability, availability, and confidentiality of network resources and information with rapid detection and analysis of security events |
| Highly scalable infrastructure | Capability of servicing any size network, no matter how large or complex |
| Incident response and remediation recommendations | Faster identification of anomalous and suspicious activity, mitigation of threats often before widespread damage occurs; protects business critical networks |
| Specific, agreed upon criteria for response to security events | Responsive notification of security incidents and guidance through appropriate remediation steps. |
| Monthly status reports and reviews | Ongoing awareness of event activity and response, and proactive threat preparation |

Motorola's Enterprise IT Security Monitoring service portfolio offers the following service levels:

| Service Level | Level 1 | Security monitoring for networks with up to three (3) firewalls, three (3) intrusion detection sensors and 10 other devices |
|---------------|---------|---|
| | Level 2 | Security monitoring for networks with up to seven (7) firewalls, seven (7) intrusion detection sensors and 30 other devices |
| | Level 3 | Security monitoring for networks with up to 15 firewalls, 15 intrusion detection sensors and 50 other devices |

NOTE: For complete program details and information about availability in a specific country or geography, please contact your Enterprise Mobility business representative.
