

Advanced Services

Why Motorola Advanced Services?

New and emerging technologies in RFID, Mobility Services Platform (MSP), and wireless can help your business achieve unprecedented productivity gains and competitive advantage. But deploying them requires an uncommon level of skills and expertise. Motorola Advanced Services help you seamlessly integrate these new technologies into your business, minimizing potential issues and maximizing your investment.

Expertise in Emerging Technologies

Motorola Advanced Services, coupled with Motorola Customer Services, deliver the expertise you can trust across the entire solution lifecycle, from planning and assessment through analysis, design, implementation and ongoing maintenance and support. Tiered programs incorporate an integrated lifecycle approach — from planning and assessment through design, deployment and implementation — into a single streamlined program. We then leverage our expertise in emerging technologies and apply proven processes to reduce your implementation cost and risk to deliver on-time and on-budget.

Implementation Processes You Can Trust

At Motorola Advanced Services, we test and validate our programs and processes, then develop a strict protocol for deployment.

Seamless Transition to Ongoing Operations

When you use Advanced Services to deploy your solution, you can have confidence of knowing that the details of your environment are easily available to our service and support organization to help keep your business critical solution operating at peak performance.

Deploy with Confidence

Motorola Advanced Services help you deploy new technology with confidence. Whether your project scope is a single building or far-flung global facilities, our field-tested experience allows us to efficiently streamline your implementation and minimize the impact on your current operations, providing a faster return on your investment.
