

TAKE PSAP INTELLIGENCE TO THE NEXT LEVEL

THE CURRENT PSAP ENVIRONMENT IS FILLED WITH RISKS:

Ransomware attacks are accelerating – exposing sensitive information and disrupting critical operations.

Staffing and training continues to be a challenge in many centers, leading to excessive overtime and workload.

Influx of data from new sources can potentially burden call takers who will need to decide what information, correlated to an incident, is actionable.

Data moves in silos from one system to the next, presenting a single point of failure and hindering workflow efficiency.

Complex, hard-to-learn technology designed without the user in mind can create workflow inefficiencies.

THE INTELLIGENT COMMAND CENTER

SECURE

Your PSAP is protected by security processes and measures built directly into platforms and systems.

READY

Minimal training is necessary for PSAP staff to master the software thanks to intuitive user interfaces, making it easy to quickly respond, especially in moments of high stress.

CONFIDENT

As the data moves from one system to the next, your PSAP can improve data sharing up and down the workstream, for faster response, enhanced situational awareness and streamlined reporting.

INTEROPERABLE

Your PSAP maximizes efficiency with system software that is purposely engineered for intelligent interoperability so information is accurately and seamlessly shared throughout the entire first response workflow.

INTUITIVE

Data presentation is easily understandable and fits the needs of your PSAP operators in that exact moment.
