

Lightning Mobile App

Powered by Radius Mapping

RapidDeploy

a Motorola Solutions Company

Empower Field Responders

By extending the capabilities of RapidDeploy's Radius Mapping technology in the PSAP, the Lightning FirstNet Verified™ mobile app delivers actionable intelligence directly to field responders' mobile devices, including smartphones and tablets.

With access to real-time 911 call data and critical response capabilities in the field, Lightning moves first responders beyond the incident for faster, more effective, and safer response.

Mission-critical intelligence in the palm of the hand.

Location Accuracy

Situational Awareness

Modern Communications

Faster, Effective and Safer Emergency Response

Communication, real-time alerts, and faster incident response for all agencies—Law Enforcement, Fire, EMS, Emergency Management, and more.

- **Seamless collaboration and communication** enhances the effectiveness and coordination of incident response
- **Maximize interoperability** by connecting PSAP and field responders with real-time data and situational awareness
- **Better emergency response outcomes** driven by direct access to mission critical information, enhanced coordination, and modern communication
- **Faster, more efficient response** with instant access to the right information to resolve incidents in the moments that matter
- **Improved unit safety and preparedness** with enhanced situational awareness, visibility, and communication across responders

Key Mobile App Features

Find Responders

Real-time tracking of responders in the field. Sort by nearest responder or alphabetical order.

Real-Time Alerts

Notify first responders when a 911 call is received within close proximity.

Search & Native Navigation

Boost responder efficiency with real-time incident data, prioritization, and one-click driving directions.

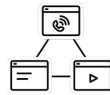

Critical Mapping Layers

Inclusive of authoritative data and commercial maps configured in the PSAP/ECC.

Disciplines

Filter incidents to tailor data for responders' specific emergency roles.

Live Incident Boards

Create a common operating picture and CCTV video sharing.

Instant Access to RapidVideo

Connect citizens with first responders via live video capabilities.

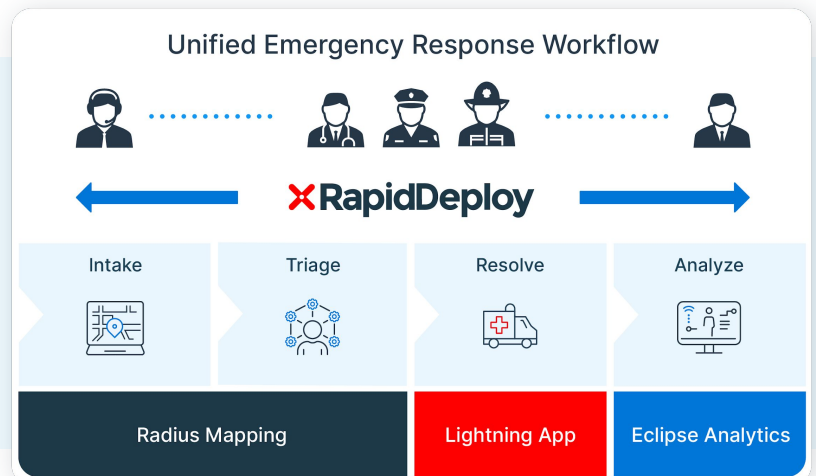

Actionable intelligence

Life-saving context like indoor mapping, entry points, school floor plans, and vehicle extrication devices.

A Common Operating Picture

Our unique product suite of NG911 solutions supports multiple stages of the unified emergency response journey. Lightning, an extension of Radius Mapping, enhances situational awareness and operational efficiency, empowering agencies to respond faster and more effectively to emergencies.

Extending Next Gen 911 Beyond the PSAP and into the Field

Device-Based Location

Lightning utilizes device telemetry to track field responder's location and visualize it on the map—within the Lightning application and within Radius Mapping (leveraged in the ECC/PSAP).

NG911 Built for the Field

Mobile app with modern communications, situational awareness data, and mapping—all visualized and built to be configurable to specific agency workflows.

Location Privacy

Your location is only used to optimize your experience while using the Lightning app. We never track location when the app is not in use.

Easy Quick Start Guides

Step-by-step onboarding guides and video tutorials for new users make getting set up and navigating the app painless and easy.
