

AI-Assisted Evidence Management

Maximize the value of your digital evidence with Assist

Turn digital evidence into actionable insight with Assist AI in CommandCentral DEMS. Our AI-assisted evidence management tools are designed to help you simplify workflows without compromising quality or evidence control.

Create incident narratives, generate transcriptions of evidence audio and redact sensitive information efficiently, without removing yourself from the driver's seat. Learn about our Assist feature collections below.

Narrative Assist

Quickly turn raw evidence into a polished narrative, without losing that essential human touch or compromising credibility. Narrative Assist includes features that help you use 1-10 pieces of video or audio evidence to generate, edit, proofread and polish a narrative. You can also track AI usage across the entire process. Once you have the final version of your narrative, you can view each version that was created, and confirm that the owner of the evidence has verified it for accuracy.

Features include:

- Narrative Builder
- AI disclaimers
- AI proofread
- Required verification
- AI polish

Redaction Assist

Streamline the redaction process with features that help you quickly identify and redact personally identifiable information (PII) from video and audio evidence. You maintain control by choosing which PII is identified, and making the final call on what is and is not redacted. You can also search for sensitive information within a transcript and redact both the text and audio. Once you have finished the redaction project, you can automatically save it to a collection for easy sharing with your partners.

Features include:

- Object detection
- Video redaction
- Audio redaction
- AI Chapterization
- AI transcription
- Transcript redaction

Types of PII Assist can detect:

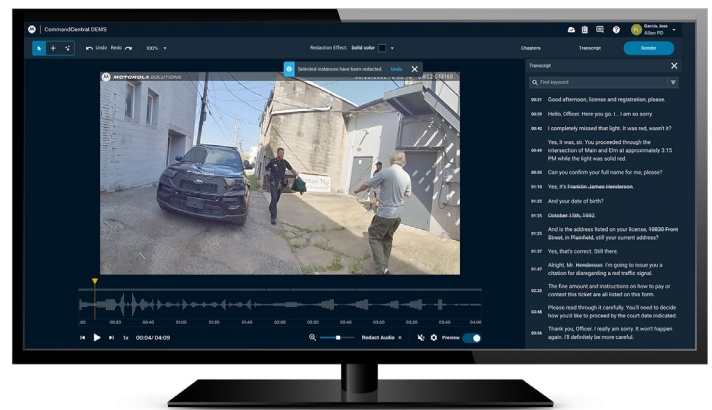

- Heads
- Documents
- License plates
- People
- Screens
- Vehicles

Review Assist

Assist can save your agency valuable time and resources with the ability to quickly generate and translate transcripts of digital evidence audio. Assist can also review your transcriptions to find keywords for quicker navigation.

Features include:

- AI transcription of videos and audio files
- Text search and review
- AI translation
 - View the original text, translated text or both
