Maximize the value of your digital evidence

CommandCentral DEMS

MOTOROLA SOLUTIONS
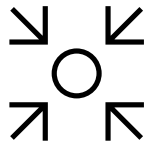

Evidence control from capture to court

Digital evidence can be one of your most valuable tools when investigating and prosecuting cases, but capturing, organizing, managing and sharing it without the right tools can be difficult and time-consuming.

CommandCentral DEMS includes all the tools you need to efficiently and securely manage your digital evidence from capture to court.

Centralized digital evidence

Save valuable time by reducing the need to switch between multiple systems. Our unified solution delivers a single, secure hub for all your digital evidence, streamlining workflows and empowering you to focus on what matters most.
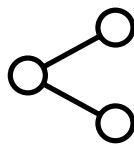

Integrated device management

Customize your body cameras, in-car video and interview recording systems and monitor their performance over time with automated reports - helping your officers capture digital evidence with confidence.

Evidence management AI tools

Manage digital evidence more efficiently with thoughtfully integrated Assist AI that helps you generate, proofread and polish narratives, redact sensitive information and transcribe files within minutes. Our AI features keep you in the driver's seat so that you never compromise evidence control.
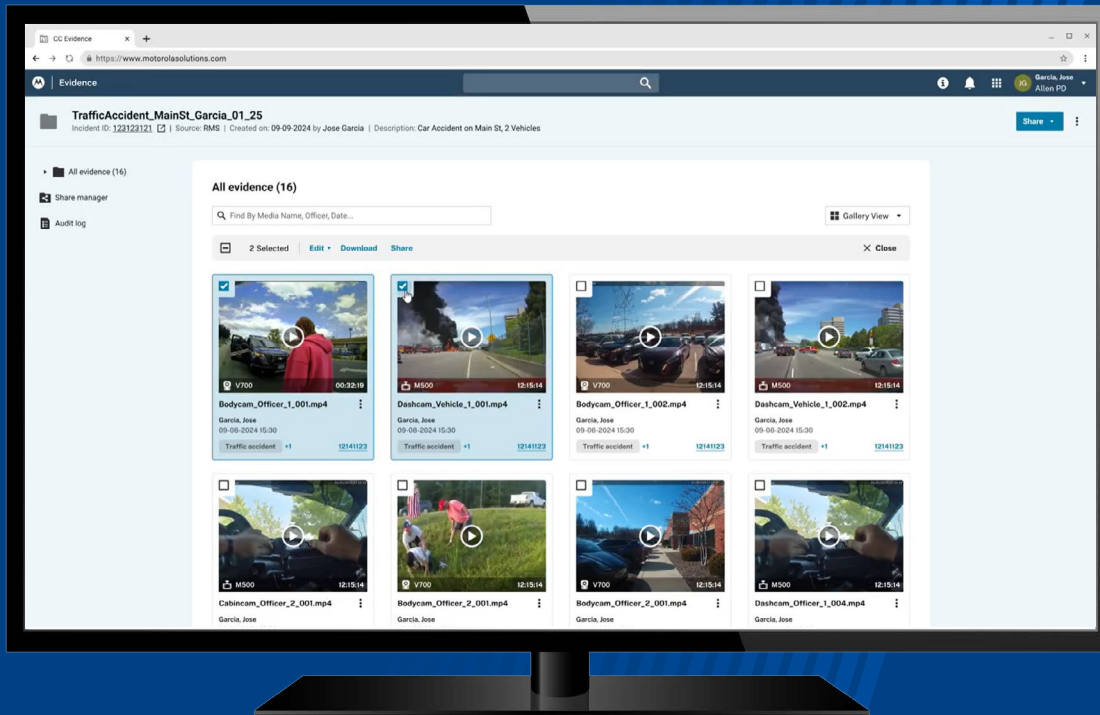

Efficient and secure sharing

Maintain evidence control with the ability to securely share case files with partners, eliminating the need to make physical copies and manually transport them.

Centralized digital evidence

Save time, and resources, by controlling your digital evidence from one centralized location. CommandCentral DEMS is your one stop for capturing, uploading, organizing, managing and sharing your evidence files. Meaning you spend less time switching between systems, and more time closing the case.

◄ Collections view

Save valuable time by reducing the need to switch between multiple systems. Our unified solution delivers a single, secure hub for all your digital evidence, streamlining workflows and empowering you to focus on what matters most.

View all file types

Capture video and secure digital evidence from body cameras, in-car video and interview recording systems. Additionally, configure and optimize these devices to meet your agency's specific needs. With customizable automation features and video encryption, you can ensure full control and integrity of your evidence.
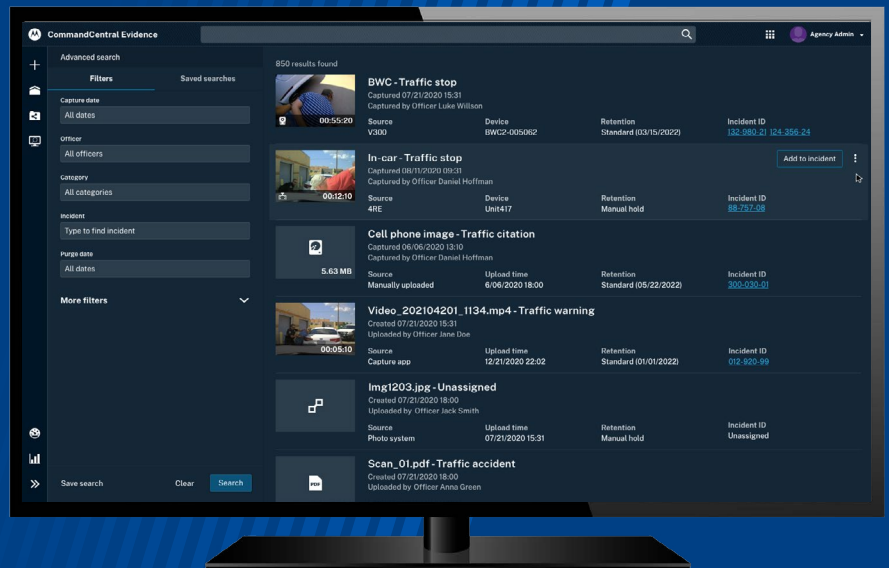

Advanced search

Quickly locate relevant digital evidence by filtering based on specific metadata like case number, date, location, and tags—saving time and improving investigative efficiency.

Capture with confidence

CommandCentral DEMS includes device management so that you can configure, optimize and assign your devices, allowing you to confidently capture evidence in the field. Customize the automation features of your devices so that they work for your agency's specific needs.

SVX video remote speaker microphone

Access mission-critical communications, evidential video capture and public safety-grade AI from one device. The SVX allows you to capture footage and audio with wireless connectivity.

V700 body camera

The V700 is a state-of-the-art, award-winning LTE-enabled body camera that captures critical incidents and keeps you connected throughout your shift. With its powerful real-time video streaming and location reporting, it can deliver critical situational awareness to your team.
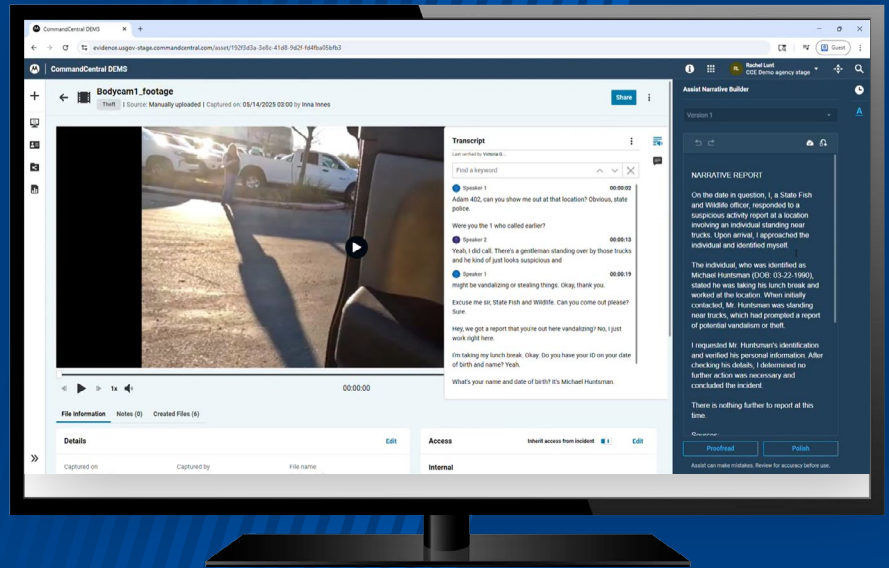

M500 in-car video

The M500 in-car video system is a groundbreaking leap forward in real-time awareness. This system enhances situational awareness and community safety through user-friendly data management and simultaneous real-time video recording and analysis.

AI evidence management

Take advantage of Assist, our thoughtfully integrated AI that helps you streamline workflows as you prepare evidence for court. Explore our AI-enhanced features below.

AI redaction

Protect personally-identifiable information in video evidence with the ability to redact content such as faces, license plates, vehicles and more.

Automated transcription

Get more specific information for your case with the ability to transcribe videos. You can also annotate and tag the transcription to identify information faster.

Assisted Narrative

Efficiently build narrative drafts from multiple sources of digital evidence captured across the course of an incident. You can also use AI to proofread and polish previously written narratives without adding additional information. Narrative drafts never contain added information, and your ability to edit and verify means you never compromise control.

Evidence management from capture to court

Our evidence management features provide an end-to-end experience that gives you evidence control from capture to court.

Evidence uploads

Maintain a complete evidence picture with the ability to upload evidence provided by fixed cameras and witnesses into CommandCentral DEMS.

GPS mapping

Find what you are looking for faster with the ability to use a specific location or a geofence to make your searches more targeted.

Security features

Keep your device and digital evidence safe with security features like access permissions, device encryption, audit logs and more.

Product integrations

Evidence captured from other Motorola Solutions software is automatically uploaded to CommandCentral DEMS, so that you can experience end-to-end evidence management and utilize existing investments.

Efficient and secure sharing

Maintain control of your evidence with the ability to securely share case files with partners, including prosecutors—eliminating the need to download and manually transport files to the courthouse, saving valuable time.

Capture the whole story with CommandCentral DEMS

Maintain evidence control from capture to court

See more, hear more, know more

Investigations are only as good as their evidence. Not only does audio, video and imagery inform your real-time response - but the view of an incident from all angles also assists investigators, juries and the public in fully understanding how the incident unfolded, after the fact. Fundamentally, more evidence means more chances to uncover the truth - and our ecosystem enables you to capture every moment, from 9-1-1 call to court.

Transform raw evidence into real cases

Once you've captured your digital evidence, it must be securely stored, digitally authenticated, and accessible in one place - regardless of file type, size or source - so your team can assemble a powerful, comprehensive account of the incident and response, exactly as it happened. But what if your technology could go further?

Our platform automatically compiles your evidentiary content with relevant call-handling and CAD data, as well as incident reports, narratives and statements, not to mention background data on people, vehicles and locations. Officers can review and refine their work, while investigators can get up to speed immediately. By intelligently linking this information and presenting it in one intuitive, unified view you minimize the risk of missing key facts, and can start preparing your case for court more quickly.
