

Proactive lone worker  
monitoring for  
MOTOTRBO radios

## Worker Safety Applications

Teldio offers a variety of worker safety applications to help **increase response times, enhance worker safety and increase situational awareness.**

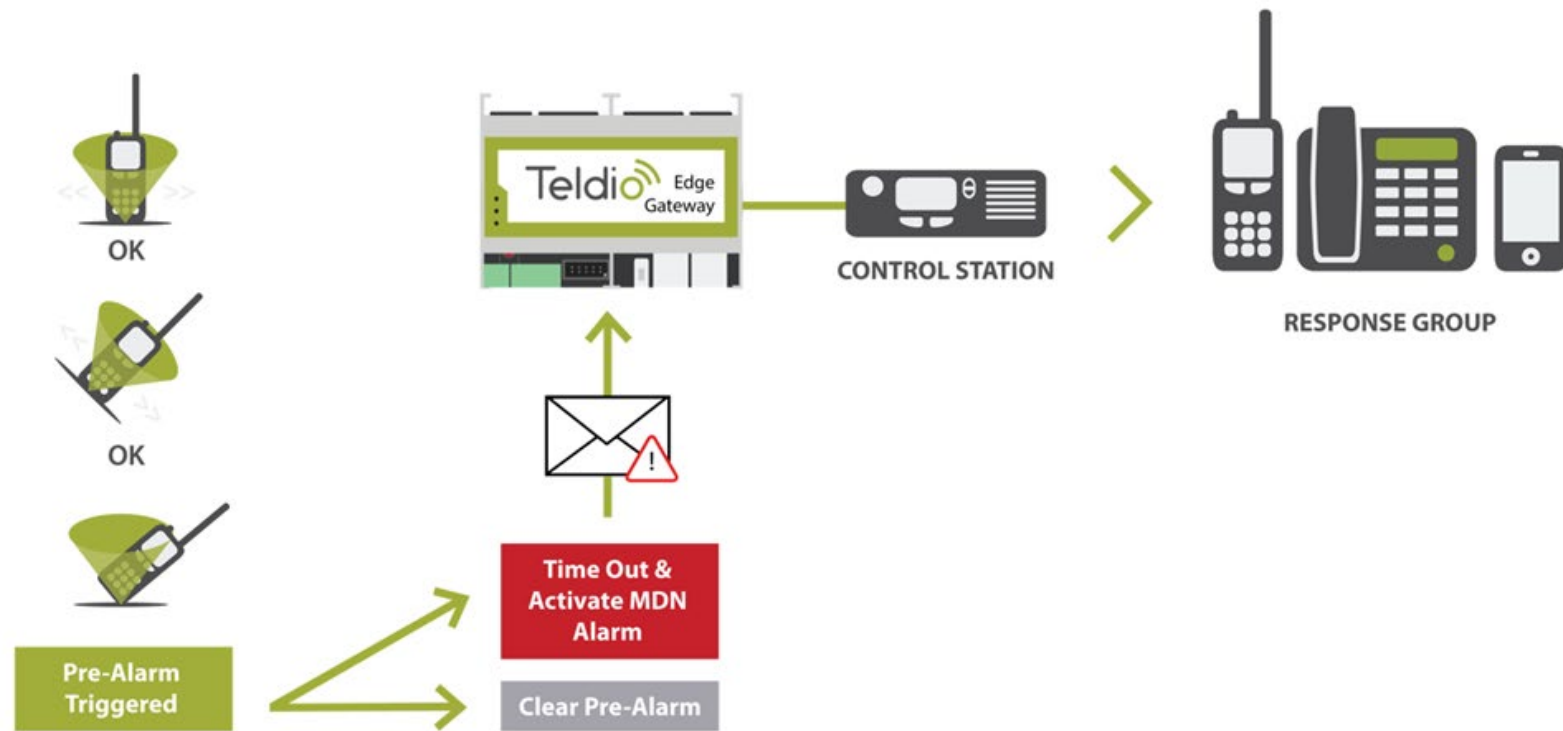

The applications allow you to ensure employees who work alone are constantly monitored. If an employee suffers a fall, the appropriate people are notified immediately.

## Man Down Notifier

Man Down Notifier (MDN) proactively monitors workers to identify if they have suffered a fall or accident. It does so by dispatching a notification to the appropriate response group when the radio's option board accelerometer (motion sensor) detects lack of movement, horizontal tilt or both.

## MDN Functions

### PRE-ALARM MODE

- Prevents false-alarms
- Configurable
- Automatically reactivates MDN

### SLEEP MODE

- Temporarily disable MDN from the radio
- Will automatically restart when timer expires

### POINT OF ORIGIN

- Customizable
- Monitored based on habits
- Prevents false-alarms

### ADJUSTABLE DETECTION TIMERS

- Stillness, Tilt, Tilt-Move
- Configurable

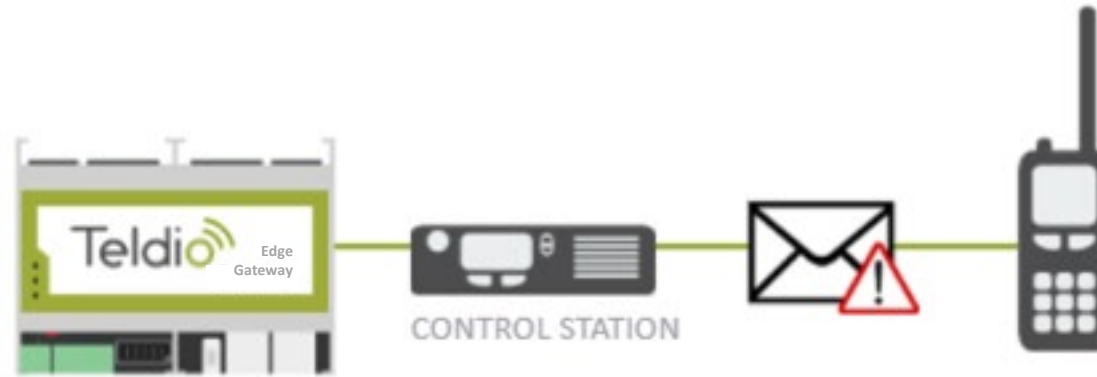

### TURN OFF ALARM BEACON

- Easy to remember
- Turns off alarm beacon

### GRAPHICAL USER INTERFACE

- Easy to use menus
- Simple user notifications

# Frequent use cases

**UTILITIES**  
Shift Supervisor

**MANUFACTURING**  
Floor Manager

**EDUCATION**  
Campus Security

**HOSPITALITY**  
Security Supervisor

**Day-to-Day  
Monitoring**

**Remote  
Workers**

**Completing  
Rounds**

**Night Shift  
Guard**
