

MOTOTRBO™

Accelerate Communication for Uncompromised Safety

ACCELERATE PERFORMANCE.

MOTOTRBO™ Delivers Uncompromised Communication for Oil & Gas.

You know the challenges. Nothing can stand in the way of your response to an emergency. Your employees have to be able to communicate easily under pressure —every time. Safety is essential. More so in the Oil & Gas worksite where safety risks are ever present and all have the potential to cause major loss of life. To keep communication uncompromised is to keep your crew safe.

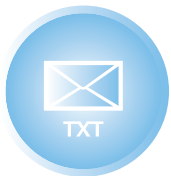

Powered by advanced Motorola technology, the MOTOTRBO™ Professional Digital Conventional Two-Way Radio System is ready to help you respond to those challenges with improved productivity.

MOTOTRBO™ Location Services

Communication That's Always Easy

MOTOTRBO™ radios are designed for easy operation, even when wearing gloves. Thanks to a simple design and intuitive menus, your employees can easily access MOTOTRBO's powerful features. With a single touch, you can call an individual radio, group of radios, or every radio in your system.

MOTOTRBO™ Text Messaging Services

MOTOTRBO™ also makes communication easy with audio that stays clear to the edge of coverage—plus digital noise suppression to aid communication in noisy environments. Moreover, MOTOTRBO™ supports integrated data applications, including text messaging. So you can always get messages through.

Factory Mutual Approved

Tough Radios for Tough Jobs

You can count on MOTOTRBO™ radios because they're tested-tough to endure hard knocks, water, dust and temperature extremes. They meet demanding standards: U.S. Military Standards 810 C, D, E, and F, and, for portable radios, IP57 for submersibility in water. MOTOTRBO™ portable radios are also intrinsically safe and can be used in locations where flammable gas, vapors or combustible dust may be present. And if your people have to work overtime, MOTOTRBO™ portable radios will too, with battery life that's up to 40 percent longer than that of traditional analog radios.

More Safety and Security for Your People

With the GPS-based Location Services application, you can easily keep track of the people and vehicles within your force—no delays if help is needed.

In addition, all MOTOTRBO™ radios support emergency call signalling—which provides flexible emergency response options even for operations that do not have a central dispatcher.

The Nearby Support You Need

Your local Motorola dealer provides comprehensive service—including service under the MOTOTRBO™ standard warranty.

A Great Fit for Your Budget

Compared to analog solutions, MOTOTRBO™ is based on a Time-Division Multiple-Access (TDMA) platform which offers twice the calling capacity on a single repeater channel and at the price of one license. A second call does not require a second repeater, saving on equipment. MOTOTRBO™ utilizes Motorola's state-of-the-art IMPRES™ technology in batteries, chargers and audio accessories providing longer talk times and clearer audio delivery.

A Complete, Flexible, Highly Capable System

MOTOTRBO™ brings you a private, standards-based, cost-effective solution that can be tailored to meet your unique coverage and feature needs—with the flexibility that a complete conventional system offers—portables, mobiles, repeaters, applications, accessories and services.
