ATTENTION!
This radio is restricted to Occupational use only. Before using the radio, read the RF Energy Exposure and Product Safety Guide for Mobile Two-Way Radios which contains important operating instructions for safe usage and RF energy awareness and control for Compliance with applicable standards and Regulations.

Radio Controls

- **Radio On/Off**
  Press the Power button to turn the radio on or off.

- **Adjusting Volume**
  If volume is set as the primary mode,
  1. Turn the MFK clockwise to increase volume or counterclockwise to decrease the volume.
  If volume is not set as the primary mode, press the MFK once and repeat step 1.

- **Selecting a Zone**
  If zone is set as the primary mode,
  1. Turn the MFK until the display shows the desired zone and press the PTT button to begin transmitting on the displayed zone.
  If zone is not set as the primary mode, press the MFK once and repeat step 1.

- **Sending an Emergency Alarm**
  1. Press the Emergency button. A tone sounds and the display alternates Emergency and the home display.
  2. A dispatcher acknowledgment Ack received display follows.
  AND, Trunking Only:
  A high-pitched tone indicates that the alarm has been received by the trunked system’s central controller.

To exit emergency at any time, press and hold the Emergency button or the PTT button.

© 2012, 2013 by Motorola Solutions, Inc. All Rights Reserved. 0613
1303 East Algonquin Road, Schaumburg, Illinois 60196, U.S.A.

*These controls/buttons are programmable.*
## Sending an Emergency Call (Trunking Only)

1. Press Emergency button.
2. A tone sounds and the display alternates Emergency and the home display. **OR**
   A short low-pitched tone sounds when the selected channel does not support emergency.
3. Press and hold the PTT button. Speak clearly into the microphone.
4. Release the PTT to end the transmission.

**To exit emergency at any time, press and hold the Emergency button.**

## Sending a Silent Emergency Alarm

1. Press the preprogrammed Emergency button to activate the silent alarm feature.
2. The display does not change; the LED does not light up, and there is no tone.

*If silent emergency alarm is used with emergency call, pressing the PTT button exits the silent mode and initiates the emergency call.*

Declaration of Conformity

This declaration is applicable to your radio only if your radio is labeled with the FCC logo shown below.

Responsible Party
Name: Motorola Solutions, Inc.
Address: 1303 East Algonquin Road, Schaumburg, IL 60196-1078, U.S.A.
Phone Number: 1-800-927-2744
Hereby declares that the product:
Model Name: APX Mobile
conforms to the following regulations:
FCC Part 15, subpart B, section 15.107(a), 15.107(d) and section 15.109(a)
Class B Digital Device

As a personal computer peripheral, this device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Note

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.
Unter Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication.

This radio transmitter has been approved by Industry Canada to operate with Motorola-approved antenna with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

**Note**

Setting up the radio as an RF Modem takes complete control of the radio. In this mode, the radio no longer responds to button and PTT presses nor will it unmute to voice activity. This mode is designed to receive and pass specifically formatted over the air data to a tethered computer with RF modem enabled applications. This mode can only be exit by reprogramming the radio with Customer Programming Software (CPS) to not operate in RF modem mode and cycling power.
Software Version

All the features described in the following sections are supported by the radio's software version **R13.00.00** or later.

See *Accessing the Radio Information* on page 133 to determine your radio software version.

Check with your dealer or system administrator for more details of all the features supported.

**Notice to Users (FCC and Industry Canada)**

This device complies with Part 15 of the FCC rules and RSS 210 of the Industry Canada rules per the following conditions:

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.
- Changes or modifications made to this device, not expressly approved by Motorola, could void the authority of the user to operate this equipment.
Computer Software Copyrights

The Motorola products described in this manual may include copyrighted Motorola computer programs stored in semiconductor memories or other media. Laws in the United States and other countries preserve for Motorola certain exclusive rights for copyrighted computer programs including, but not limited to, the exclusive right to copy or reproduce in any form the copyrighted computer program. Accordingly, any copyrighted Motorola computer programs contained in the Motorola products described in this manual may not be copied, reproduced, modified, reverse-engineered, or distributed in any manner without the express written permission of Motorola. Furthermore, the purchase of Motorola products shall not be deemed to grant either directly or by implication, estoppel, or otherwise, any license under the copyrights, patents or patent applications of Motorola, except for the normal non-exclusive license to use that arises by operation of law in the sale of a product.
Documentation Copyrights

No duplication or distribution of this document or any portion thereof shall take place without the express written permission of Motorola. No part of this manual may be reproduced, distributed, or transmitted in any form or by any means, electronic or mechanical, for any purpose without the express written permission of Motorola.
Disclaimer

The information in this document is carefully examined, and is believed to be entirely reliable. However, no responsibility is assumed for inaccuracies. Furthermore, Motorola reserves the right to make changes to any products herein to improve readability, function, or design. Motorola does not assume any liability arising out of the applications or use of any product or circuit described herein; nor does it cover any license under its patent rights, nor the rights of others.
Getting Started

How to Use This Guide

This User Guide covers the basic operation of the APX Mobiles.

However, your dealer or system administrator may have customized your radio for your specific needs. Check with your dealer or system administrator for more information.

Notations Used in This Manual

Throughout the text in this publication, you will notice the use of **Warning**, **Caution**, and **Note**. These notations are used to emphasize that safety hazards exist, and the care that must be taken or observed.

**Warning**
An operational procedure, practice, or condition and so on, which may result in injury or death if not carefully observed.

**Caution**
An operational procedure, practice, or condition and so on, which may result in damage to the equipment if not carefully observed.

**Note**
An operational procedure, practice, or condition and so on, which is essential to emphasize.

The following special notations identify certain items.

<table>

</tr>
<tr>
<td>✅</td>
<td>This means “Press the right side of the 4-Way Navigation Button”</td>
</tr>
</tbody>
</table>
Additional Performance Enhancement

The following performance enhancements are some of the latest creations designed to enhance the security, quality and efficiency of the radios.

ASTRO 25 Enhanced Data

ASTRO 25 Enhanced Data is optimized to handle different message sizes and variable update rates from different applications of the radio. Add Enhanced Data to the Integrated Data system with a software installation to improve data channel efficiency and enable denser network traffic.

Dynamic System Resilience (DSR)

DSR ensures the radio system is seamlessly switched to a backup master site dynamically in case of system failure. DSR also provides additional indication e.g. failure detection, fault recovery, and redundancy within the system to address to the user in need. Mechanisms related to the Integrated Voice and Data (IV&D) or data centric are all supported by DSR.

CrossTalk Prevention

This feature prevents crosstalk scenario from happening, especially when a wideband antenna is used. This feature allows the adjustment of the Trident Transmitting SSI clock rate in the radio to be varied from the Receiving Frequency. This subsequently reduced the possibilities of radio frequency interfering spurs and prevents the issues of crosstalk.

Encrypted Integrated Data (EID)

EID provides security encryption and authentication of IV&D data bearer service communication between the radio and the Customer Enterprise Network.

SecureNet

SecureNet allows user to perform secured communications on an Analog or Motorola Data Communication (MDC) channel. The MDC Over-the-Air Rekeying (OTAR) feature will allow users to perform OTAR activities on an MDC channel.

P25 Digital Vehicular Repeater System (DVRS)

Motorola Solutions offers an MSI Certified APX compatible, 3rd Party, P25 Digital Vehicular Repeater System (DVRS) that provides low cost portable radio
coverage in areas where only mobile radio coverage is available and portable radio coverage is either intermittent or non-existent.

Conventional Talkgroup and Radio Scan Enhancements

A few enhancements have been made to the Conventional Talkgroup at the system. These enhancements improve the Scan feature operation significantly when multiple agencies are using a single conventional radio frequency channel. These enhancements allow users to use Selective Squelch to operate on only the subset of talkgroups that are relevant to the users rather than all talkgroups on the channel. These Scan improvements have been made to eliminate the audio holes that were present and to turn on the busy LED when activity is present on the channel. Mixed Vote Scan and Standard Conventional Scan configurations are supported. Priority Operation is also supported.

Up to 30 different talkgroups can be supported using conventional channels. A maximum of four talkgroups can be supported when Vote Scan channels are being used.

Smart PTT is supported with this enhancement as Smart PTT prevents users from transmitting while other users are on the channel.

Note
User Selectable Talkgroups are not compatible with this Conventional Talkgroup Enhancement.

What Your Dealer/System Administrator Can Tell You

You can consult your dealer or system administrator about the following:
• Is your radio programmed with any preset conventional channels?
• Which buttons have been programmed to access other features?
• What optional accessories may suit your needs?
Preparing Your Radio for Use

This section provides simple instructions to prepare your radio for use.

Turning On the Radio

1. Press the **Power Button** briefly to power on the radio.

After a short time, the red, yellow and green LEDs light up. The display then shows Zone and channel text, and menu items display on the screen.

The backlight turns on to the last selected dim level.

[Note]

Pressing the **Power Button** before the LED lights up will be ignored.

If **Fail ##/##** appears in the display, the radio will not function until the condition has been corrected.

If **Error ##/##** appears, some non-critical data has been changed. If either of these displays appear, if the display goes blank, or if the unit appears to be locked up, see **Helpful Tips** on page 138 for more information.

If **Ch mismatch** appears, means that either the Control Head has been connected to an incompatible transceiver, or vice versa.

If your radio does not power up, contact your dealer.

2. To turn off the radio, press the **Power Button** after the LEDs light up.

Adjusting the Volume

1. To increase the volume, rotate the **Multi-Function Knob** clockwise.
To decrease the volume, rotate this knob counterclockwise. The display shows volume bars and volume level when you change the volume.

Validating Compatibility During Power Up

The radio validates and updates the software and hardware of your control head(s) during power up. During validation, the display shows Maintenance Mode Remote Device promptly followed by other maintenance statuses.

Press the Power On/Off Button to reset when the display shows Update done Please reset upon completion, or when the display shows Update failed Please reset when it fails to update.

If the software updates are complete, the radio runs the usual power up operation. If the updates are incomplete, the radio runs the Maintenance Mode and the display shows Maintenance Mode Remote Device; promptly followed by other maintenance statuses again.

**Note**
If SW incomplete appears, use Flashport Recovery Tool to update the control heads before you power on the radio again.

### Programmable Features

Any reference in this manual to a control that is preprogrammed means that the control must be programmed by a dealer or qualified radio technician using the radio programming software, in order to assign a feature to that control.

The programmable buttons can be programmed as shortcuts to radio functions or preset channels/groups depending on the duration of a button press:

- **Press** Pressing and releasing rapidly.
- **Long Press** Pressing and holding for the preprogrammed duration (between 0.25 seconds and 3.75 seconds).
- **Hold down** Keeping the button pressed.

---

1. These radio controls/buttons are programmable.
2. The hardware of your radio is Bluetooth ready. Check with your dealer or system administrator for more details of all the features supported.
One Touch Button
Each of the four Menu Select buttons, the Emergency button and the three Accy buttons on the microphone are programmable buttons which can be preprogrammed by a qualified radio technician to a default function which is activated upon a short press.

Assignable Radio Functions

**Auxiliary**
Switches back and forth between two radios that are attached to the same control head.

**Call Alert**
Allows the radio to function like a pager, or to verify if a radio is active on the system.

**Call Response**
Allows you to answer a private call or phone call.

**Channel**
Selects a channel.

**Contacts**
Selects the Contacts menu.

**Delete**
Deletes digit, or deletes a nuisance channel in Scan.

**Digital Vehicle Repeater System**
Toggles between the Digital Vehicle Repeater System (VRS) mode.

**Dynamic Priority (Conventional Only)**
Allows any channel in a Scan List (except for the Priority-One channel) to temporarily replace the Priority-Two channel.

**Emergency**
Depending on the programming, initiates or cancels an emergency alarm or call.

**Ext PA On/Off**
Toggles the audio routing between the connected public address (PA) loudspeaker amplifier and the radio’s internal public address (PA) system.

**Information**
Displays the information of the radio.

**Intercom**
Enables users of multiple control heads to talk to each other via the control heads in a multi-control head setup.
<p>| <strong>Internet Protocol Address</strong> | Display the Internet Protocol (IP) address, device name and status of the radio. |
| <strong>Location</strong> | Determines the current location (latitude, longitude, time and date), and also the distance and bearing to another location. Or, turns the GPS functionality on or off for all locations. |
| <strong>Message</strong> | Enters the current message list. |
| <strong>Monitor (Conventional Only)</strong> | Monitors a selected channel for all radio traffic until function is disabled. |
| <strong>Multiple Private Line (Conventional Only)</strong> | Selects the Multiple Private Line lists. |
| <strong>Nuisance Delete</strong> | Temporarily removes an unwanted channel, except for priority channels or the designated transmit channel from the scan list. |
| <strong>One Touch 1– 4</strong> | Launches a specific feature with one single button-press. You can setup as many as four separately programmed buttons for four different features. |
| <strong>Phone</strong> | Allows you to make and receive calls similar to standard phone calls. |
| <strong>Private Call (Trunking Only)</strong> | Allows a call from an individual radio to another individual radio. |
| <strong>Private Line Defeat (Conventional Only)</strong> | Overrides any coded squelch (DPL or PL) that is preprogrammed to a channel. |
| <strong>Recent Calls</strong> | Allows easy access to the list of calls recently received or made. |
| <strong>Rekey Request</strong> | Notifies the dispatcher you want a new encryption key. |
| <strong>Repeater Access Button (RAB)</strong> | Allows user to manually send a repeater access codeword. |</p>

Wail  Toggles the external wail alert tone on or off.

Yelp  Toggles the external yelp alert tone on or off.

**Accessing the Preprogrammed Functions**

You can access various radio functions through one of the following methods.

- A short or long press of the relevant programmable buttons.
- Use the **Menu Select** button ( ).

**Menu Select Buttons**

**Note**

Check with your dealer or system administrator for the list of features activated in your radio.

Use the **Menu Select** button to access the menu entry of your radio feature. Your radio may be preprogrammed differently from the following example, but the steps for selecting a zone may to be the same.

Press the **Menu Select** button ( ) directly below Zone.

**Advance Programmable Buttons**

This feature is to help you to shorten the process of applying certain common features.
A. Emergency Button
B. Up & Down Buttons
C. Menu Select Buttons
D. Accy No-Dot Button (Purple)
E. Accy 1-Dot Button
F. Accy 2-Dot Button

(Quick Access) One Touch Button

Enters a menu with a short press on the preprogrammed One Touch button. Features assigned to these buttons are Call, Call Alert, Phone, Repeater Access, MDC RTT Button Access, Status and Message.

Home Button

Pressing the button returns you to the Home (default) screen. In most cases, this is the current mode. For selected radio features, the button is also used to save user-edited radio settings or information before returning you to the Home screen.

3 These programmable buttons support the One Touch Button feature.
**Note**

Some features do not require you to press \( \text{Home} \) to go to the Home screen. Refer to the individual feature sections in this manual for further details on saving user-edited radio settings or information.

The \( \text{Home} \) button also can revert to home channel from any other zone and mode in the radio. Check with your dealer or system administrator for more information.

**Dimmer Button**

Use this button to adjust the brightness of the display. Long press to toggle between day and night mode.

**4-Way Navigation Button**

Use the **4-Way Navigation Button** to scroll up, down, left or right with one of the following methods.

- Press and release one of the button to scroll from one entry to the next one.
- Press and hold one of the button to have the radio toggles through the list automatically (release the button to stop).

**Data Feature Button**

Use **Data Feature** button to access data-related features, such as the Text Messaging Service (TMS) feature screen.

**Multi-Function Knob (MFK)**

**Mode Change**

Press the **MFK** once and turn clockwise to scroll the channel list.

**Volume Change**

Turn the **MFK** clockwise or counterclockwise to adjust the volume level of the speaker.

The volume level can be adjusted in 16 steps or 32 steps. A fast turn of the **MFK** adjusts the volume level in 16 steps with large increments in volume level. A slow turn of the **MFK** adjusts the volume level in 32 steps with small increments in volume level.

The display shows the volume level and bars to indicate the current level. The level of last selected volume when your radio powers down remains the same when the radio powers up.
The main display shows the icon of the secondary feature. The main display does not show the icon of primary feature.

Your radio by default is set to use the primary feature. Short press the MFK to toggle it to work on either the secondary or primary feature.

The concentric ring LED A on the MFK will blink in green when the knob is set to secondary feature.

The secondary feature has an inactivity timer. This timer starts when the secondary feature is idle. The radio returns to primary feature when the timer expires.

If the MFK is set to operate only one feature, it is recommended that it be set to Volume Change.

Consult your dealer or system administrator for the best options available for MFK.

Push-To-Talk (PTT) Button

The PTT button A on the side of the microphone serves two basic purposes:

• While a call is in progress, the PTT button allows the radio to transmit to other radios in the call.

  Press and hold down PTT button to talk. Release the PTT button to listen. The microphone is activated when the PTT button is pressed.

• While a call is not in progress, the PTT button is used to make a new call. See Making a Radio Call on page 53 for more information.
Identifying Status Indicators

Status Icons

The liquid crystal display (LCD) of your radio shows the radio status, text entries, and menu entries. The following are the icons that appear on the display of the radio.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
</table>
| ![Receiving Icon](image) | Receiving
- Radio is receiving a call or data. |
| ![Transmitting Icon](image) | Transmitting
- Radio is transmitting a call or data. |
| ![Call Received Icon](image) | Call Received
- Radio has received an Individual Call. |
| ![RSSI Icon](image) | Received Signal Strength Indicator (RSSI)
- The number of bars displayed represents the received signal strength for the current site, for trunking only. The more stripes in the icon, the stronger the signal. |

Direct

- **On** – Radio is currently configured for direct radio-to-radio communication (during conventional operation only).
- **Off** – Radio is connected with other radios through a repeater.

Monitor (Carrier Squelch)

- Selected channel is being monitored (during conventional operation only).

In-Call User Alert

- **On** – The feature is enabled. Voice muting of the affiliated trunking talkgroup or selected conventional channel is activated.
- **Off** – The feature is disabled. Voice muting of the affiliated trunking talkgroup or selected conventional channel is deactivated.
**Power Level**

- **L** – Radio is set at Low power.
- **H** – Radio is set at High power.

**Scan**

Radio is scanning a scan list.

**Priority Channel Scan**

- **Blinking dot** – Radio detects activity on channel designated as Priority-One.
- **Steady dot** – Radio detects activity on channel designated as Priority-Two.

**Vote Scan Enabled**

The vote scan feature is enabled.

**Secure Operation**

- **On** – Secure operation.
- **Off** – Clear operation.
- **Blinking** – Receiving an encrypted voice call.

**AES Secure Operation**

- **On** – AES secure operation.
- **Off** – Clear operation.
- **Blinking** – Receiving an encrypted voice call.

**GPS Signal**

- **On** – Feature is enabled and signal is available.
- **Off** – Feature is disabled.
- **Blinking** – Feature is enabled, but no signal is available.

**User Login Indicator (IP Packet Data)**

- **On** – User is currently associated with the radio.
- **Off** – User is currently not associated with the radio.
- **Blinking** – Device registration or user registration with the server failed due to an invalid username or pin.
<table>
<thead>
<tr>
<th>Status Indicator</th>
<th>Description</th>

Turn the MFK to turn the volume up or down.

Text Messaging Service (TMS) Indicators

This feature allows you to send and receive text messages. Status icons and menu options shown here help you to work more efficiently with TMS feature. See *Text Messaging Service (TMS)* on page 83 for more information.

TMS Status Icons

The following icons appear on the radio’s display when you send and receive text messages.

- **Inbox Full**
  The Inbox is full.

- **Message Sent**
  The text message is sent successfully.

- **Message Unsent**
  The text message cannot be sent.

- **Unread Message**
  - User receives a new message.
  - The selected text message in the Inbox has not been read.

- **Read Message**
  The selected text message in the Inbox has been read.

- **Normal Message**
  User is composing a message with normal priority and without a request for a reply.

- **Message Index**
  Indicates the index of the current message the user is viewing.
Example: If the user is looking at the third message out of a total of 6 messages in the Inbox folder, the icon is displayed as the icon on the left column.

Priority Status

- The “Priority” feature is toggled on before the message is sent.
- Messages in the Inbox folder are flagged with “Priority”.

Request Reply

- The “Request Reply” feature is toggled on before the message is sent.
- Messages in the Inbox folder are flagged with “Request Reply”.

Priority Status and Request Reply

- User is composing a message with a priority status and a request for a reply.
- Messages in the Inbox folder are flagged with “Priority” and “Request Reply”.

TMS Menu Options

<table>
<thead>
<tr>
<th>Menu Option</th>
<th>Description/Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Back</td>
<td>Brings you back to the previous screen.</td>
</tr>
<tr>
<td>Save</td>
<td>Saves the messages you have edited to the Draft folder.</td>
</tr>
<tr>
<td>New</td>
<td>Creates a new message.</td>
</tr>
<tr>
<td>Impt</td>
<td>Toggles the “Priority Status” icon on or off for an outgoing message.</td>
</tr>
<tr>
<td>RqRp</td>
<td>Toggles “Request Reply” icon on or off for an outgoing message.</td>
</tr>
<tr>
<td>Del</td>
<td>Deletes a message or text.</td>
</tr>
<tr>
<td>Edit</td>
<td>Edits a draft message or key in a target address.</td>
</tr>
<tr>
<td>Exit</td>
<td>Exits to the Home screen.</td>
</tr>
<tr>
<td>No</td>
<td>Cancel the delete all messages options.</td>
</tr>
<tr>
<td>Optn</td>
<td>Brings you to the Options main screen.</td>
</tr>
<tr>
<td>Rply</td>
<td>Replies to a message.</td>
</tr>
</tbody>
</table>
### Menu Option

<table>
<thead>
<tr>
<th>Menu Option</th>
<th>Description/Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sel</td>
<td>Selects a predefined message or address.</td>
</tr>
<tr>
<td>Send</td>
<td>Sends the message.</td>
</tr>
<tr>
<td>Yes</td>
<td>Deletes all the messages in the current folder.</td>
</tr>
</tbody>
</table>

### Call Type Icons

The following icons appear on the radio’s main display, when you make or receive a call, or view selected call lists, to indicate the different call types associated with an alias or ID.

- **Mobile number added to a Call List.**
- **Landline phone number.**
- **Landline phone number added to a Call List.**
- **Incoming call or data.**
- **Outgoing call or data.**

### LED Indicator

The LED indicator shows the operational status of your radio.

- **A**
- **B**
- **C**
<table>
<thead>
<tr>
<th>Status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solid red</td>
<td>Radio is transmitting.</td>
</tr>
<tr>
<td>Blinking red</td>
<td>Radio is transmitting at low battery condition.</td>
</tr>
<tr>
<td>Double blinking red</td>
<td>Radio is in Emergency Mode.</td>
</tr>
<tr>
<td>Rapidly blinking red</td>
<td>Radio has failed the self test upon powering up or encountered a fatal error.</td>
</tr>
<tr>
<td>Solid yellow (Conventional Only)</td>
<td>Channel is busy.</td>
</tr>
<tr>
<td>Blinking yellow</td>
<td>Radio is receiving a secured transmission.</td>
</tr>
<tr>
<td>Solid green</td>
<td>Radio is powering up, or is on a non-priority channel while in the Scan List Programming mode.</td>
</tr>
</tbody>
</table>

**Blinking green**
- Radio is receiving an individual or telephone call, or is on a Priority-Two channel while in the Scan List Programming mode.
- Radio is receiving an individual or telephone call, or is on a Priority-Two channel while in the Scan List Programming mode.

**Rapidly blinking green**
- Radio is on a Priority-One channel while in the Scan List Programming mode.

**Multi-function Knob - Concentric Ring LED**

The concentric ring LED 🌈 blinks green when the **MFK** is using the secondary feature. See **Multi-Function Knob (MFK)** on page 27 to understand the functionality of **MFK**.

If Intelligent Lighting is activated, the concentric ring LED does not blink green when the **MFK** is in the secondary mode. The LED turns into solid color of orange, red or green depending on the status of Intelligent Lighting. See **Intelligent Lighting Indicators** on page 42 for different status of Intelligent Lighting.
Intelligent Lighting Indicators

This feature temporarily changes the display backlight color and the alert text background color of the radio to help signal that a radio event has occurred.

Note
This feature must be preprogrammed by a qualified radio technician.

<table>
<thead>
<tr>
<th>Backlight and Bar Color</th>

General Radio Operation

Selecting a Zone

Your radio must be preprogrammed to allow you to use this feature.

A zone is a group of channels. The following methods are options on how to select a radio zone. The result of all the methods is the same. You can use the options interchangeably depending on your preference and the programmed functions.

• Select a zone via the MFK:
  a) Rotate the MFK until the display shows the desired zone.

• Select a zone via the radio menu Zone:
  a) \( \downarrow \) or \( \uparrow \) to Zone and press the Menu Select button directly below Zone.
  b) \( \downarrow \) or \( \uparrow \) to the required zone, or use the keypad to enter the zone number.
  c) Press \( \uparrow \) or the PTT button to confirm the selected zone number.
  d) Press the PTT button to transmit on the displayed zone channel.

Selecting a Radio Channel

A channel is a group of radio characteristics, such as transmit/ receive frequency pairs. The following methods are options on how to select a radio channel. The result of all the methods is the same. You can use the options interchangeably depending on your preference and the programmed functions.

• Select a channel via the MFK:
  a) If channel is set as the primary mode, turn the MFK until the display shows the desired channel.
  If channel is not set as the primary mode, press the MFK once and repeat this step.
  b) Press the PTT button to begin transmitting on the displayed channel.

• Select a channel via the radio menu Chan:
  a) \( \downarrow \) or \( \uparrow \) to Chan.
  b) Press the Menu Select button directly below Chan.
Receiving and Responding to a Radio Call

Once you have selected the required channel and/or zone, you can proceed to receive and respond to calls.

Receiving and Responding to a Talkgroup Call

To receive a call from a group of users, your radio must be configured as part of that talkgroup.

When you receive a talkgroup call (while on the Home screen) the radio triggers for your attention with one of the following scenarios depending on the system your radio is configured:

- For ASTRO Conventional system, the LED lights up solid yellow. The display shows the talkgroup alias or ID, and the caller alias or ID.
- For Trunking system, the display shows the caller alias or ID.

1. Hold the microphone vertically 1 to 2 inches (2.5 to 5.0 cm) from your mouth.

2. Press the PTT button to respond to the call. The LED lights up solid red.
3 Release the PTT button to listen.

See also *Making a Talkgroup Call* on page 53 for details on making a Talkgroup Call.

**Receiving and Responding to a Private Call (Trunking Only)**

A Private Call is a call from an individual radio to another individual radio.

The one-to-one call between the two radios are not heard by the others in the current talkgroup. The transmitting radio automatically verifies that the receiving radio is active on the system and can display the caller ID.

**Note**

With the inactivity timer enabled (optional), when there is no response from the receiving radio, the transmitting radio exits the call with Menu Inactive Exit tone after the timer expires.

When you receive a Private Call, you hear two alert tones and the LED blinks green. The display shows Call received and the caller alias or ID.

1 Press the Menu Select button directly below Resp within 20 seconds after the call indicators begin.

If the caller alias is in the call list, the display shows the caller alias during the call.

If the caller name is not in the call list, the display shows the caller ID.

2 Press and hold the PTT button to talk. Release the PTT button to listen.

3 Press  to hang up and return to the Home screen.

**Note**

If you press PTT button before pressing the Menu Select button directly below Resp, your conversation will be heard by all members of the talk group.

If 20 seconds pass before you press the Menu Select button directly below the Resp, you will not respond privately to the call just received. Instead, you initiate a Private Call.

See also *Making a Private Call (Trunking Only)* on page 54 for details on making a Private Call.
Receiving and Responding to a Telephone Call
(Trunking Only)

This feature allows you to receive calls similar to standard phone calls from a landline phone.

**Note**
With the inactivity timer enabled (optional), if there is no response to the call after the timer expires, your radio exits the call with Menu Inactive Exit tone.

When you receive a Telephone Call, you hear a telephone-type ringing and the LED blinks green. The backlight of the screen turns green. The display shows Phone Call and the call received icon blinks.

1. Press the **Menu Select** button directly below Resp.

2. Press and hold the **PTT** button to talk. Release the **PTT** button to listen.

3. Press ⌘ or the **Menu Select** button directly below Exit to hang up and return to the Home screen.

See also *Making a Telephone Call (Trunking Only)* on page 55 for details on making a Telephone Call.

---

Making a Radio Call

You can select a zone, channel, subscriber ID, or talkgroup by using:

- The preprogrammed Zone menu
- The **MFK**
- A preprogrammed **One Touch** button.
- The Contacts list (see *Contacts* on page 64).

**Note**
The radio automatically exits the feature, if the feature inactivity timer is enabled, when the radio is left idle and the timer expires. You will hear the Menu Inactive Exit Tone upon feature exit.

Making a Talkgroup Call

To make a call to a group of users, your radio must be configured as part of that talkgroup.

1. Perform one of the following actions:

   - ⌘ or ⌈ to Tgrp and press the **Menu Select** button directly below Tgrp. The display shows the last-selected talkgroup. Press the **Menu Select** button directly below Sel.
• Use the MFK to select the channel with the desired talkgroup.

2 Hold the microphone vertically 1 to 2 inches (2.5 to 5.0 cm) from your mouth.

3 Press the PTT button to make the call. The radio shows different indicators based on the system the radio is configured.
   • For ASTRO Conventional system, the LED lights up solid red. The display shows the talkgroup alias or ID.
   • For Trunking system, the LED lights up solid red.

4 Speak clearly into the microphone.

5 Release the PTT button to listen.

Making a Private Call (Trunking Only)

Your radio must be preprogrammed to allow you to use this feature.

This feature allows you to send an individual Call Alert or page if there is no answer from the target radio. See Sending a Call Alert Page on page 75 for more information.

1 Perform one of the following actions:
   • To access this feature via a preprogrammed button, press the preprogrammed Quick Access (One-Touch) Private Call button to dial the preprogrammed ID (number) and initiate the Private Call. Proceed to step 5.
   • To access this feature via the menu, proceed to the next step.

2 \( \text{or} \) to Call, and press the Menu Select button directly below Call. The display shows the last transmitted or received ID.

3 To select the required ID, perform one of the following actions:
   • Press the Menu Select button directly below Cnts to scroll through and select the required ID.
   • Press the Menu Select button directly below List to go to the first number of the call list.
   • \( \text{or} \) \( \text{or} \) to the required ID.
   • Use the keypad to enter the required ID.

4 Press the PTT button to initiate the Private Call.
A telephone-type ringing sounds if the receiving unit is in service. The display shows Calling... <Number> or Calling... <Alias>.

5 Hold the microphone vertically 1 to 2 inches (2.5 to 5.0 cm) from your mouth. When you are connected, the display shows the ID of the target radio.
If no acknowledgment is received, the display shows No acknowledge.
If the target radio does not respond before the time out, the display shows No answer.

6 Press and hold the PTT button to talk. Release the PTT button to listen.

7 Press 🏡 to return to the Home screen.

Making a Telephone Call (Trunking Only)
This feature allows you to make calls similar to standard phone calls to a mobile or landline phone.

1 Perform one of the following actions:
   • To access this feature via a preprogrammed button, press the preprogrammed Quick Access (One-Touch) Phone Call button to dial the preprogrammed phone number. Proceed to step 5.
   • To access this feature via the menu, proceed to the next step.

2 ◀ or ▶ to Phon, and press the Menu Select button directly below Phon. The display shows the last transmitted or received ID.

3 To select the required ID, perform one of the following actions:
   • Press the Menu Select button directly below Cnts to scroll through and select the required ID.
   • Press the Menu Select button directly below List to go to the first number of the call list.
   • ◀ or ▶ to the required phone number.
   • Use the keypad to enter the required phone number.

4 Press the PTT button to dial the phone number.

5 Hold the microphone vertically 1 to 2 inches (2.5 to 5.0 cm) from your mouth.
6 When your call is answered, press and hold the PTT button to talk. Release the PTT button to listen.

7 Press 🏡 to return to the Home screen.

See Alert Tones on page 43 for more information if your call is NOT answered.

Switching Between Repeater or Direct Operation Button

The Repeater Operation increases the radio’s range by connecting with other radios through a repeater. The transmit and receive frequencies are different.

The Direct or “talkaround operation” allows you to bypass the repeater and connect directly to another radio. The transmit and receive frequencies are the same.

Perform one of the following actions:

• Press the preprogrammed Repeater/Direct switch to toggle between talkaround and repeater modes.

• ⬅ or ⬆ to Dir and press the Menu Select button directly below Dir.

The display shows Repeater mode if the radio is currently in Repeater mode.

The display shows Direct mode and the Talkaround icon if the radio is currently in Direct mode (during conventional operation only).

Monitor Feature

Radio users who switch from analog to digital radios often assume that the lack of static on a digital channel is an indication that the radio is not working properly. This is not the case.

This digital technology quiets the transmission by removing the noise from the signal and allows only the clear voice or data information to be heard.

Use the Monitor feature to make sure a channel is clear before transmitting.

Monitoring a Channel

• Monitoring a Channel in Conventional Modes:
  a) Lift the microphone off hook.
  b) Listen for activity on that channel.
c) Adjust the volume by rotating the MFK if necessary.

d) If you hear no activity, press and hold the PTT button to start your conversation.

- **Monitoring a Channel in Trunked Modes:**
  a) Lift the microphone off hook.
  b) Press the PTT button.
  c) If you hear two, short, high-pitched tones, or if you hear no tone and the indicator lights steadily, then proceed with your message.
  d) Release the PTT button to receive (listen).

If you are not in the range of the system, you may hear a continuous low-pitched tone and the display shows **Out of range**.

**Monitoring Conventional Mode**

This feature must first be enabled by a qualified radio technician or system administrator.

This feature allows you to monitor channel traffic on conventional channels by defeating the coded squelch. Thus, you can listen to another user active on the channel. This way, you may be prevented from talking over someone else’s conversation.

1. To activate monitoring, perform one of the following actions:
   - At Home mode where the default zone and channel are being displayed, press the **Menu Select** button directly below **Mon** momentarily.
   - Take the control head off hook.

   The display shows **Monitor On**. You hear all channel traffic.

2. Press the **Menu Select** button again to deactivate the monitoring.

   The display shows **Monitor off**.

   **Monitor on** shown on the display indicates that the radio is monitoring. Pressing the **Menu Select** button again turns monitor off and you don’t hear all channel traffic. If you try to transmit on a receive-only channel, you hear an invalid tone until you release the PTT button.
Advanced Features

Advanced Call Features

Calling a Phone Not in the List

1. or to Phon.
2. Press the Menu Select button directly below Phon.
3. Enter the desired phone number on the keypad. The display updates as the numbers are entered.
4. Press the ✓ button or the PTT button on the keypad microphone to make the call.
5. Press and hold the PTT button to talk. Release the PTT button to listen.
6. Press or Menu Select button directly below Phon to exit.

Selective Call (ASTRO Conventional Only)

This feature allows you to receive a call from or to call a specific individual. It is intended to provide privacy and to eliminate the annoyance of having to listen to conversations that are of no interest to you.

Receiving a Selective Call

When you receive a Selective Call, you hear two alert tones and the LED lights up solid yellow. The call received icons blink and the display alternates between Call received and the home display.

The speaker unmutes.

1. Hold the microphone vertically 1 to 2 inches (2.5 to 5.0 cm) from your mouth.
2. Press and hold the PTT button to talk. Release the PTT button to listen.

Note

If you press PTT button before pressing the Menu Select button directly below Call, your conversation is heard by all members of the talk group.

If 20 seconds pass before you press the Menu Select button directly below the Call, you are not responding privately to the call just received. Instead, you initiate a
Selective Call. See *Making a Selective Call* on page 59.

**Making a Selective Call**

1. Perform one of the following actions:
   - To access this feature via a preprogrammed button, press the preprogrammed Quick Access (One-Touch) Selective Call button to dial the preprogrammed ID. Proceed to step 4.
   - To access this feature via the menu, proceed to the next step.

2. **or** to Call, and press the Menu Select button directly below Call. The display shows the last transmitted or received ID.

3. To select the required ID, perform one of the following actions:
   - Press the Menu Select button directly below Cnts to scroll through and select the required ID.
   - **or** to the required ID.
   - Use the keypad to enter the required ID.

4. Hold the microphone vertically 1 to 2 inches (2.5 to 5.0 cm) from your mouth.

5. Press and hold the PTT button to start the Selective Call. The display shows the ID of the target radio.

6. Release the PTT button to listen.

7. Press  to return to the Home screen.

   If you do not press button to hang up, your radio will remain in Selective Call state with the other unit. You will miss all subfleet traffic and incoming phone calls.

**Talkgroup Call Feature (Conventional Operation Only)**

This feature allows you to define a group of conventional system users so that they can share the use of a conventional channel.

**Note**

Encryption keys are associated to talkgroups. When talkgroups are associated, encryption keys are changed by changing the active talkgroup. See *Secure Operations* on page 93 for more information.
Selecting a Talkgroup

1. Press the Menu Select button directly below Tgrp. The display shows the last Talkgroup that was selected and stored.

2. Perform one of the following actions:
   - Press the Pset button for the preset preprogrammed Talkgroup.
   - Press the Sel button to the required Talkgroup.

3. Press the Menu Select button directly below Sel to save the currently selected Talkgroup and return to the Home screen.
   - If the encryption key associated to the new Talkgroup is erased, you hear a momentary key fail tone and the display shows Key fail.
   - If the encryption key that is associated to the new Talkgroup is not allowed, you hear a momentary key fail tone and the display shows Illegal key.

4. Press ▲ to return to the Home screen.

Sending a Status Call

This feature allows you to send data calls to the dispatcher about a predefined status.

Each status can have up to a 14-character name. A maximum of eight status conditions is possible.

Note

The radio automatically exits the feature, if the feature inactivity timer is enabled, when the radio is left idle and the timer expires. You will hear the Menu Inactive Exit Tone upon feature exit.

1. Perform one of the following actions:
   - Press the preprogrammed Status button.
   - Press the Sts button and press the Menu Select button directly below Sts.

The display shows the last acknowledged status call, or the first status in the list.

2. Perform one of the following actions:
   - Press the keypad to enter a number corresponding to the location in the status list.
3 Press the **PTT** button to send the status. When the dispatcher acknowledges, you hear four tones and the display shows *Ack received*. The radio returns to normal dispatch operation.

If no acknowledgment is received, you hear a low-pitched tone and the display shows *No acknowledge.*

4 Press 🏡 to return to the **Home** screen.

No traffic is heard on trunked channels while Status Calls is selected. If the radio detects no Status Call activity for six seconds, an alert tone sounds until you press 🏡 or the **PTT** button.

---

**Responding to the Dynamic Regrouping Feature (Trunking Only)**

This feature allows the dispatcher to temporarily reassign selected radios to a particular channel where they can communicate with each other. This feature is typically used during special operations and is enabled by a qualified radio technician.

You will not notice whether your radio has this feature enabled until a dynamic regrouping command is sent by the dispatcher.

---

**Note**

If you try to access a zone or channel that has been reserved by the dispatcher as a dynamically regrouped mode for other users, you hear an invalid tone.

When your radio is dynamically regrouped, it automatically switches to the dynamically regrouped channel. You hear a Gurgle tone and the display shows the dynamically regrouped channel’s name.

Press the **PTT** button to talk. Release **PTT** button to listen.

When the dispatcher cancels dynamic regrouping, the radio automatically returns to the zone and channel that you were using before the radio was dynamically regrouped.

**Requesting a Reprogram (Trunking Only)**

This feature allows you to notify the dispatcher when you want a new dynamic regrouping assignment.

Perform one of the following actions:

- Press the preprogrammed **Reprogram Request** button to send reprogram request to the dispatcher.
• ▼ or ▲ to Rpgm then press the Menu Select button directly below Rpgm to send reprogram request to the dispatcher.

The display shows Reprogram Rqst and Please wait.

If you hear five beeps, the dispatcher has acknowledged the reprogram request. The display shows Ack received and the radio returns to the Home screen.

If the dispatcher does not acknowledge the reprogram request within six seconds, you hear a low-pitched alert tone and the display shows No acknowledge. Try again or press ▲ to cancel and return to the Home screen.

**Classification of Regrouped Radios**

The dispatcher can classify regrouped radios into either of two categories:

- **Select Enabled** Select-enabled radios are free to change to any available channel, including the dynamic-regrouping channel, once the user has selected the dynamic-regrouping position.

- **Select Disabled** Select-disabled radios cannot change channels while dynamically regrouped. The dispatcher has forced the radio to remain on the dynamic-regrouping channel.

The Scan or Private Call feature cannot be selected while your radio is Select Disabled.

**Dynamic Zone Programming (DZP)**

**Note**

Your radio must be preprogrammed to allow you to use this feature. This feature works on the condition at least one zone in the radio must be a non-dynamic zone.

This feature provides one or more Dynamic Zones to store the frequent used channels be it conventional or trunking. These dynamic channels are saved from pre-existing (non-dynamic) channels in the radio. This saves the time and effort from the regular navigation around the working zones and channels. User can also delete or update the list in the Dynamic Zone.
Entering the Dynamic Zone to Select a Dynamic Channel

1. or to Zone then press the Menu Select button directly below Zone.
   The display shows the Zone screen.

2. or to "Dynamic Zone Channels".[4]

3. Perform one of the following actions:
   - Press the Menu Select button below Sel to select.
   - Press the Menu Select button below Exit to exit.

If you have selected one of the Dynamic Zone Channels list, the display returns to Home screen with the selected "Dynamic Zone Channels" shown on the screen.[4]

If you have selected Exit without selecting any Dynamic Zone Channels list, the display returns to Home screen without any changes.

Saving a Channel in the Dynamic Zone from List Selection

The radio must be in Dynamic Zone in order to perform this operation.

1. or to ZnPr. Press the Menu Select button directly below ZnPr to enter Program Zone screen.

2. Press the Menu Select button directly below Edit.
   The display shows Search Options screen.

3. or to List Selection. Press the Menu Select button directly below Sel.
   The display shows Select Zone screen.

4. or to the required zone. Press the Menu Select button directly below Sel.
   The display shows Select Chan screen.

5. or to the required channel. Press the Menu Select button directly below Sel.
   The display shows Channel updated.

---

4 # indicates number of the channel on the 16-Position Switch which are numbered from 1 to 16.
6 Press the Menu Select button directly below Exit to return to Home screen.

Deleting a Channel in the Dynamic Zone

The radio must be in Dynamic Zone in order to perform this operation.

1 or to ZnPr then press the Menu Select button directly below ZnPr to enter Program Zone screen.
The display shows the dynamic channels list.

2 or to the saved dynamic channel then press the Menu Select button directly below Del. The display shows Channel deleted screen.

3 Press the Menu Select button below Exit to return to Home screen. The Home screen shows <Dynamic Zone Channels>.

If the channel deleted is the Home channel, the Home screen shows <Zone Name>+”Blank”.

Contacts

This feature provides “address-book” capabilities on your radio. Each entry corresponds to an alias (name) or ID (number) that you use to initiate a call.

Contact entries are alphabetically sorted according to entry alias. Each alias can have up to five IDs of different call types associated with it.

Additionally, each entry, depending on context (conventional, trunking, or phone), associates with one or more of the four types of calls: Phone Call, Selective Call, Private Call, or Call Alert.

Each entry within Contacts contains the following information:

- Call Alias (Name)
- Call ID (Number)
- Call Type (Icon)
- WACN ID (Astro 25 Trunking IDs only)
- System ID

Note

Your radio must be preprogrammed to allow you to add, edit, or delete the contact entries.
Your radio also supports a maximum of 50 call lists. Each list can store up to 100 IDs (numbers).

**Note**
Your radio is preprogrammed with a number of contacts per Call Lists. Check with your dealer or system administrator for more information.

The radio automatically exits the feature, if the feature inactivity timer is enabled, when the radio is left idle and the timer expires. You hear the Menu Inactive Exit Tone upon feature exit.

**Making a Private Call from Contacts**
Your radio must be preprogrammed to allow you to use this feature.

1. **to Cnts** and press the **Menu Select** button directly below Cnts. The entries are alphabetically sorted.

2. **or** to the required subscriber alias.

3. Perform one of the following actions:
   - Press the **Menu Select** button directly below **Optn** and proceed to the next step.
   - Press the **Menu Select** button directly below Cnts and proceed to step 6.

4. **or** to **Call** and press the **Menu Select** button directly below Sel.

5. **or** to select the call type.

6. Hold the microphone vertically 1 to 2 inches (2.5 to 5.0 cm) from your mouth.

7. Press the **PTT** button to initiate the call. During the call, the display shows the subscriber alias.

8. Press and hold the **PTT** button to talk. Release the **PTT** button to listen. The LED lights up solid red when the **PTT** button is pressed.

   If there is no voice activity for a preprogrammed period of time, the call ends.

   If the call reaches the maximum ring time, the call ends.
Adding a New Contact Entry

1. or to Cnts and press the Menu Select button directly below Cnts.
   The entries are alphabetically sorted.

2. or to [New Contact] and press the Menu Select button directly below Sel.
   The display shows Name.

3. Press the Menu Select button directly below Edit.

4. Use the keypad to enter the name and press the Menu Select button directly below OK once you have entered the name.
   To cancel this operation, press the Menu Select button directly below Cnc1 to return to the previous screen.

5. or to [Add Number] and press the Menu Select button directly below Sel.
   The display shows Type 1 <Default Type>.

6. Press the Menu Select button directly below Edit.

7. or \( \rightarrow \) to the required channel and press the Menu Select button directly below OK.

8. or \( \rightarrow \) to Number 1 and press the Menu Select button directly below Edit.
   The display shows Number 1 and a blinking cursor appears.

9. Use the keypad to enter the number and press the Menu Select button directly below OK once you have entered the number.
   To cancel this operation, press the Menu Select button directly below Cnc1 to return to the previous screen.

10. Press the Menu Select button directly below Done once you have finished.
    The display shows <Entry> Stored, confirming that the contact entry has been added.
    The radio returns to the main Contacts screen.

Deleting a Contact Entry

1. or to Cnts and press the Menu Select button directly below Cnts.
The entries are alphabetically sorted.

2 \(\uparrow\) or \(\downarrow\) to the entry you want to delete and press the Menu Select button directly below Opn.

3 \(\uparrow\) or \(\downarrow\) to Del and press the Menu Select button directly below Sel. The display shows <Entry> Confirm del?.

4 Select the Menu Select button directly below Yes to delete the entry, or No to cancel and return to the main screen of Contacts. The display shows <Entry> deleted and the radio returns to the main screen of Contacts.

Adding a Contact to a Call List

1 \(\uparrow\) or \(\downarrow\) to Cnts and press the Menu Select button directly below Cnts. The entries are alphabetically sorted.

2 \(\uparrow\) or \(\downarrow\) to the entry you want to add and press the Menu Select button directly below Opn.

3 \(\uparrow\) or \(\downarrow\) to Add to CallLst or Add to PhonLst and press the Menu Select button directly below Sel.

4 Perform one of the following actions:
   - \(\uparrow\) or \(\downarrow\) until the display shows [Available] and press the Menu Select button directly below Add to add as a new entry.
   - \(\uparrow\) or \(\downarrow\) until the display shows <Entry> and its associated number and press the Menu Select button directly below Rplc to replace the existing entry.

The display shows <Entry> added, confirming the addition of the contact to the list.

Methods of Contact Editing in a Call List

Editing an Entry Alias

1 \(\uparrow\) or \(\downarrow\) to Cnts and press the Menu Select button directly below Cnts. The entries are alphabetically sorted.
**Editing as Entry ID**

1. or to Cnts and press the Menu Select button directly below Cnts.
   The entries are alphabetically sorted.

2. or to the entry you want to edit and press the Menu Select button directly below Optn.

3. or to Edit and press the Menu Select button directly below Sel.

4. or to the entry alias you wish to change and press the Menu Select button directly below Edit. A blinking cursor appears.

5. Use the keypad to edit the name and press the Menu Select button directly below OK once you have finished.
   The display returns to the Edit Contact screen.

6. Press the Menu Select button directly below Done to save your changes and return to the main screen of Contacts.

**Editing a Call Type**

1. or to Cnts and press the Menu Select button directly below Cnts.
   The entries are alphabetically sorted.

2. or to the entry you want to edit and press the Menu Select button directly below Optn.

3. or to Edit and press the Menu Select button directly below Sel.

4. or to the entry ID you wish to change and press the Menu Select button directly below Edit. A blinking cursor appears.

5. Use the keypad to edit the number and press the Menu Select button directly below OK once you have finished.
   The display returns to the Edit Contact screen.

6. Press the Menu Select button directly below Done to save your changes and return to the main screen of Contacts.
2 ▲ or ▼ to the entry you want to edit and press the Menu Select button directly below Opn.

3 ▲ or ▼ to Edit and press the Menu Select button directly below Sel.

4 ▲ or ▼ to Type and press the Menu Select button directly below Edit.

5 ▲ or ▼ to choose from the list of call types given and press the Menu Select button directly below OK.
The display returns to the Edit Contact screen.

6 Press the Menu Select button directly below Done to save your changes and return to the main screen of Contacts.

Scan Lists

Scan lists are created and assigned to individual channels/groups. Your radio scans for voice activity by cycling through the channel/group sequence specified in the scan list for the current channel/group.

Your radio supports different types of Scan Lists:

- Trunking Priority Monitor Scan List
- Conventional Scan List
- Talkgroup Scan List

A maximum of 200 Scan Lists can be programmed in your radio. These lists must be preprogrammed by a qualified radio technician.

Viewing a Scan List

1 ▲ or ▼ to ScnL and press the Menu Select button directly below ScnL.

2 ▲ or ▼ to view the members on the list.

3 Press ▼ to exit the current display and return to the Home screen.

Editing the Scan List

This feature lets you change scan list members and priorities.

1 ▲ or ▼ to ScnL and press the Menu Select button directly below ScnL.
The display shows the lists that can be changed.

2 ▲ or ▼ to the entry you want to edit.
3 Perform one of the following actions:
   • Press the **Menu Select** button directly below **Sel** to add and/or change the priority of the currently displayed channel in the scan list.
   • Press the **Menu Select** button directly below **Del** to delete the currently displayed channel from the scan list.
   • Press the **Menu Select** button directly below **Rcl** to view the next member of the scan list.

4 Perform one of the following actions to select another channel that needs to be added or deleted then repeat step 3. Otherwise, proceed to the next step.
   • **↑** or **↓** to the desired channel.
   • Use the keypad to enter the desired channel name.
   • Use the **MFK** to select the channel.

5 Press **↑** to exit scan list programming and return to the Home screen.

---

See *Viewing and Changing the Priority Status* on page 71 for more information on how to add and/or change the priority of the currently displayed channel in the scan list.

### Changing the Scan List Status

1 Long press the preprogrammed **Scan** side button.

2 **↑** or **↓** to the member you want to edit.

3 Perform one of the following actions:
   • Press the **Select** button once to add the currently displayed channel to the scan list.
   • Press the **Select** button one or more times to change the scan list status icon of the currently displayed channel.

4 Perform one of the following actions:
   • **↑** or **↓** to select more list members whose scan status you want to change.
   • Use the **MFK** to select another scan list member.

5 Press **↑** to exit scan list programming and return to the Home screen.
Viewing and Changing the Priority Status

Perform one of the following actions:

- Press the **Menu Select** button directly below **Sel** one or more times to change the priority status of the current displayed channel.
- Press the **Select** button one or more times to toggle between different status of the Scan List status icon of the current displayed channel.

The radio shows one of following priority status icons and scenarios:

- A Scan icon indicates that the current channel is in the scan list as a non-priority channel. The LED lights up solid green.
- A Priority-Two Channel Scan icon indicates that the current channel is in the scan list as the Priority-Two channel. The LED blinks green.
- A Priority-One Channel Scan icon indicates that the current channel is in the scan list as the Priority-One channel. The LED rapidly blinks green. You hear all traffic on the Priority-One channel, regardless of traffic on non-priority channels.
- No icon indicates that the current channel is deleted from the scan list.

---

**Scan**

This feature allows you to monitor traffic on different channels by scanning a preprogrammed list of channels.

**Turning Scan On or Off**

Perform one of the following actions:

- Press the preprogrammed **Scan** button to initiate or stop scan.
- or to **Scan** and press the **Menu Select** button directly below **Scan**.

If the scan is enabled, the display shows **Scan on** and the scan status icon.

If the scan is disabled, the display shows **Scan Off**.

The radio returns to the Home screen.
Turning Scan On While Disregarding the Squelch Code (Conventional Channels Only)

or to Mon and press the Menu Select button directly below Mon. The brief Monitor on display indicates that the radio is disregarding the squelch code.

Note
While scanning for activity, you can still receive fleetwide, system-wide, dynamic regrouping, incoming telephone interconnect and Private Conversation/Call Alert calls.

Respond to these types of calls as you would normally on the selected channel. However, when scanning different channels while in talkgroup scan, incoming Private Conversation/Call Alert calls may be missed.

Transmitting While the Scan is On

Transmitting Using Radio Programmed for Talkback Scan

Press the PTT button to transmit on the channel indicated by the display.

The radio does not begin scanning again for a predetermined hang time after you release the PTT button, allowing the other party to respond. If the other party responds within the hang time, scanning does not resume until the full hang time expires after they have finished speaking, allowing the conversation to be completed.

To transmit on the selected channel if another channel is active, first turn scan off by pressing the Menu Select button below Scan momentarily.

Transmitting Using Radio Programmed for Non-Talkback Scan

Press the PTT button at any time to transmit on the selected channel or fixed channel.

To make a Call Alert page, or Private Conversation call while scanning, press either the Menu Select button directly below page or call.
The call is entered on the selected channel and scanning is halted until the call is exited by pressing 🗣️ or pressing the Menu Select button below either page or call.

Deleting a Nuisance Channel

If a channel continually generates unwanted calls or noise (termed a “nuisance” channel), you can temporarily remove the unwanted channel from the scan list.

This capability does not apply to priority channels or the designated transmit channel.

When the radio is locked onto the channel to be deleted, 🖨️ or 🖪️ to Nuis and press the Menu Select button directly below Nuis.

The radio continues scanning the remaining channels in the list.

Restoring a Nuisance Channel

To restore the deleted nuisance channel, perform one of the following actions:

• Turn off the radio, and then turn it back on. Nuisance mode delete can be disabled by the system administrator.

Changing Priorities Status While Scan is On

While the radio is scanning, the dynamic priority change feature allows you to temporarily change any channel in a scan list (except for the Priority-One channel) to the Priority-Two channel.

This change remains in effect until scan is turned off. Scan then reverts to the preprogrammed (original) setting.

1 Press the Menu Select button directly below DYNP to change the priority of a non-priority channel in the scan list to Priority-Two.

2 Press 🖪️ momentarily to exit the scan list and resume scanning.

Restoring Priorities in a Scan List

To restore the original channel priorities in a scan list, perform one of the following actions:

• Turn scan off, and then on.
• Change channels.
• Turn off the radio, and then turn it back on.

Using the Hang Up Box (HUB)

To temporarily suspend Scan Mode operation, remove the control head from the Hang Up Box (HUB).

You are allowed to use the control head while scan is suspended. However, Priority Member scanning is not suspended. This feature applies to all Scan Lists and Scan Types. Scan is resumed once the control head is returned to the holding clip and the preprogrammed hang time has elapsed.

Note
Priority Scan List members are continuously scanned only when the Scan List, Designated Tx Member field is set to “Talkback” in the radio programming. Otherwise, all scan mode operation is suspended.

Call Alert Paging

This feature allows your radio to work like a pager.

Even if other users are away from their radios, or if they are unable to hear their radios, you can send them an individual Call Alert page. You can also verify if a radio is active on the system.

Depending on how your radio is programmed, when you make an Enhanced Private Call, the radio either automatically sends a call alert page if there is no answer after the maximum ring time, or when you press the PTT button.

Note
This feature must be preprogrammed by a qualified radio technician.

Receiving a Call Alert Page

When you receive a Call Alert page, you hear four repeating alert tones and the LED blinks green. If Call Alert Tone Auto Reset is enabled, you hear one alert tone and the LED blinks green. The call received icons blinks and the display shows Page received.

Press the PTT button to answer or press any button to clear the Call Alert page.

See Making a Talkgroup Call on page 53 or Making a Private Call (Trunking Only) on page 54 for more information on returning the call.
Sending a Call Alert Page

The following methods are options on how to send a call alert page. The result of all the methods is the same. You can use the options interchangeably depending on your preference and the programmed functions.

Note
If the feature inactivity timer is enabled, your radio automatically exits the feature when your radio is left idle long enough for the time to expire. You hear the Menu Inactive Exit Tone upon feature exit.

• Sending a call alert page via the preprogrammed Quick Access (One-Touch) Call Alert Paging button:
  a) Press the preprogrammed Quick Access (One-Touch) Call Alert Paging button to send a page to the preprogrammed ID.
  The display shows Paging...<Number> or <Alias>.
  If the call alert page is sent successfully, you hear four high-pitched tones and the display shows Ack received. The radio returns to the Home screen.
  If the call alert page is not acknowledged, you hear a low tone and the display shows No acknowledge. Press the Menu Select button directly below OK to return to the main screen for Contacts.
  b) Press the Menu Select button directly below Page.
  c) or to select the required ID.
  d) Press the PTT button to send the page.
    The display shows Paging...<Number> or <Alias>.
    If the call alert page is sent successfully, you hear four high-pitched tones and the display shows Ack received. The radio returns to the Home screen.
    If the call alert page is not acknowledged, you hear a low tone and the display shows No acknowledge. Press the Menu Select button directly below OK to return to the main screen for Contacts.
Sending a call alert page via the radio menu Call:

a) or to Call.
b) Press the Menu Select button directly below Call.
c) or to select the alias or ID, and press the PTT button to initiate the call.
   If the target radio does not respond after a preprogrammed period of time, the display shows Send page?.
d) To send the call alert page, press the Menu Select button directly below Yes. To exit the screen without sending the call alert page, press the Menu Select button directly below No.
   The display shows Paging...<Alias>.
   If the call alert page is sent successfully, you hear four high-pitched tones and the display shows Ack received. The radio returns to the Home screen.
   If the call alert page is not acknowledged, you hear a low tone and the display shows No acknowledge. Press the Menu Select button directly below OK to return to the main screen of Contacts.

Enabling and Disabling In-Call User Alert

Make sure you are in Home mode where the default zone and mode are being displayed.

You can enable and disable voice transmission, if needed.

1 or to scroll to the VMut and press the Menu Select button directly below VMut.
   Voice mute is activated.

2 To turn the feature off, press the Menu Select button directly below VMut or the VMut preprogrammed button again.
   Pressing the Menu Select button directly below VMut or the VMut programmed button momentarily toggles between Voice mute on and Voice mute off. Voice mute on shown on the display indicates that the radio is muted to all conventional dispatch calls and affiliated trunking group calls.
Emergency Operation

The Emergency feature is used to indicate a critical situation.

If the Orange button is preprogrammed to send an emergency signal, this signal overrides any other communication over the selected channel.

Your radio supports the following Emergency modes:

- Emergency Alarm
- Emergency Call (Trunking Only)
- Emergency Alarm with Emergency Call
- Silent Emergency Alarm
- Special Considerations for Emergencies

Check with your dealer or system administrator for more information on the programming of this feature.

Only one of the Emergency modes above can be assigned to the preprogrammed Emergency button or the Emergency footswitch.

Note
To exit emergency at any time, press and hold the preprogrammed Emergency button for about a second.

Sending an Emergency Alarm

This feature allows you to send a data transmission, which identifies the radio sending the emergency, to the dispatcher.

1. Press the preprogrammed Emergency button.

A tone sounds and the display alternates Emergency and the home display. A dispatcher acknowledgment Ack received display follows. For trunking system, the radio also sounds a high-pitched tone that indicates the alarm has been received by the trunked system’s central controller.

2. Press and hold the EMERGENCY button or the PTT button to return to normal operation.

Sending an Emergency Call (Trunking Only)

This feature gives your radio priority access to a talkgroup.

1. Press the preprogrammed Emergency button. One of the following scenarios occurs:

- A tone sounds and the display alternates Emergency and the home display.
- You hear the radio sounds a short low-pitched tone to indicate the selected channel does not support emergency and rejects to launch emergency mode.

2. Hold the microphone vertically 1 to 2 inches (2.0 to 2.5 cm) from your mouth.

3. Press and hold the PTT button. Speak clearly into the microphone.

4. Release the PTT button to end the transmission and wait for a response from the dispatcher.

5. To exit Emergency Call, press and hold the preprogrammed Emergency button for about a second.

**Sending an Emergency Alarm with Emergency Call**

This feature gives your radio priority access on a channel for conventional system, and to a talkgroup for trunking system.

If the radio has both emergency call and alarm features enabled, it automatically proceeds to the call mode after the alarm is acknowledged.

1. Press the preprogrammed Emergency button.

The display alternates Emergency and the home display. A high-pitched tone sounds, indicating that the alarm has been received by the trunked system’s central controller. A dispatcher acknowledgment (four high-pitched tones) follows, accompanied by an Ack received display.

2. Hold the radio vertically 1 to 2 inches (2.5 to 5.0 cm) from your mouth.

3. Press and hold the PTT button. Speak clearly into the microphone.

4. Release the PTT button to end the transmission and wait for a response from the dispatcher.

5. To exit Emergency Call, press and hold the preprogrammed Emergency button for about a second.

Turning the radio off also cancels the emergency state.

**Sending a Silent Emergency Alarm**

This feature allows you to send an Emergency Alarm to the system without triggering any audio or visual indicators.
This activated microphone state is also known as “hot mic”.

**Note**
If you press the PTT button during hot mic, and continue to press it after the hot mic duration expires, the radio continues to transmit until you release the PTT button.

1 Press the preprogrammed Emergency button. The display shows no changes, the LED does not light up, and you hear no tones. The silent emergency state continues until you perform the next step.

2 Press and hold the emergency button until a tone sounds to exit the silent alarm mode.

If silent emergency alarm is used with emergency call, pressing the PTT button exits the silent mode and initiates the emergency call.

**Special Considerations for Emergencies**
- If you press the emergency button while in a channel that has no emergency capability, a low-pitched tone sounds.
- If the unit is out of the range of the system and/or the emergency alarm is not acknowledged, a tone sounds and the display shows **No acknowledge**.
- If you press the emergency button, then change to a mode that has no emergency capability, the display shows **No emergency** and a continuous low-pitched tone sounds until a valid emergency mode is selected or until the emergency is cancelled.
- When an emergency is active, changing to another mode where emergency is enabled (trunked or conventional) causes an emergency alarm and/or emergency call to be active on the new mode.

**Automatic Registration Service (ARS)**
This feature provides an automated data application registration for the radio. When you turn on the radio, the device automatically registers with the server.

Data applications within the fixed network can determine the presence of a device on the system and send data to the device. For example: Text Messaging Service (TMS).

The Automatic Registration Service for the radio consists of two (2) modes:
• ARS Server Mode (default mode)
• ARS Non-Server Mode

Note
The default ARS mode can be changed by a qualified radio technician using the radio’s programming software.

Selecting or Changing the ARS Mode

The following methods are options on how to select or change the ARS Mode. The result of all the methods is the same. You can use the options interchangeably depending on your preference and the programmed functions.

• Selecting or Changing the ARS mode via the radio menu:
  a) Press and hold ‹ or › to Chan.
  b) Press the Menu Select button directly below Chan.
     The display shows the current zone is not blinking, and the channel is blinking.
  c) ‹ or › or press the MFK once and rotate the MFK to the desired channel.
     One of the following scenarios occur:
     • In ARS Server Mode, the display shows the User Login Indicator icon, the zone, and ARS server channel.
     • In ARS Non-Server Mode, the display shows the User Login Indicator icon, the zone, and ARS non-server channel.
     • If the channel or mode selected is unprogrammed, the display shows Unprogrammed. Repeat this step.
  d) Press ⬇ to confirm the displayed zone and channel.

• Selecting the ARS mode via the MFK:
  a) After the zone you want is displayed, toggle until the display shows the required channel. The display shows the current zone is not blinking, and the channel is blinking.
  b) ‹ or › or press the MFK once and rotate the MFK to the desired channel.
     One of the following scenarios occur:
     • In ARS Server Mode, the display shows the User Login Indicator icon, the zone, and ARS server channel.
In ARS Non-Server Mode, the display shows the User Login Indicator icon, the zone, and ARS non-server channel.

If the channel or mode selected is unprogrammed, the display shows Unprogrammed. Repeat this step.

c) Press \( \uparrow \) to confirm the displayed zone and channel.

User Login Feature

This feature allows you as the user to be associated with the radio. With this association, every data application (Example: Text Messaging Service) takes on a friendly username.

You can still send text messages without logging in as a user. The user login feature only enables the recipient of your message to identify you as the sender by assigning a username to your message.

Note

Valid characters for a username entry are capital letters (A – Z), small letters (a – z), numbers (0 – 9), symbols (*, #, -, /), and the space character.

The maximum length for a username is eight (8) characters. Usernames are not case sensitive in server mode but are case sensitive in non-server mode.

A predefined username may sometimes be invalid because the programming software that is used to set predefined usernames allows you to set usernames comprising of eight (8) characters or more.

Logging In as a User

1. \( \downarrow \) or \( \uparrow \) to User and press the Menu Select button directly below User.

The display shows the User Login screen.

2. Perform one of the following actions:

- \( \uparrow \) or \( \downarrow \) to [ID Entry] and press the Menu Select button directly below Edit to enter ID. A blinking cursor appears on the screen. Use the keypad to type or edit a user name. Press the Menu Select button directly below Ok to submit.

- \( \uparrow \) or \( \downarrow \) to scroll through the list of predefined user names. Press the Menu Select button
directly below Sel to select the predefined user name.
• Press and hold ‹ or › to scroll through the list of predefined user names at a fast scroll rate. Press the Menu Select button directly below Logn to select the predefined user name.

If the selected predefined username has more than eight (8) characters, or an invalid character in it, the display momentarily shows Invalid ID.

3 Press the Menu Select button directly below PIN. A blinking cursor appears beside PIN.

4 Enter your Personal Identification Number (PIN) number.
The maximum PIN length is 4 digits. The PIN number will appear as asterisks.

5 Press the Menu Select button directly below Logn.
One of the following scenarios occurs:
• In ARS Server Mode, the display shows the User Login Indicator icon, the ID, and In progress, with Cncl.
• In ARS Non-Server Mode, the display shows the User Login Indicator icon, the ID, and Logged in, with Logt and Exit.
• In non-ARS enabled mode, the display shows Offline, with Logt and Exit.

One of the following scenarios occurs:
• If the user name is invalid, login fails and the user login failure indicator (IP indicator) icon blinks. The display also shows momentary Login failed.
• If the PIN is invalid, login fails and the user login failure indicator (IP indicator) icon blinks. The display also shows momentary Login failed.
• Wait for the logged in confirmation screen. If the login process is successful, the display shows the successful user login indicator (IP indicator) icon and Logged in, with Logt and Exit.

Note
To cancel the login process and return to the initial user login screen, press the Menu Select button directly below Cncl.

Logging Out
Once the data application registration is completed, you can log out.
Note
Private data refers to all messages in the text messaging Inbox, Draft, and Sent folder. The next user is able to access the Inbox, Draft and Sent messages if private data is not deleted.

1 or to Logt and press the Menu Select button directly below Logt.

The display shows the User Login Indicator icon and Clear private data?.

2 Perform one of the following actions:
   • Select Yes to clear all your private data. The display shows momentary Private data cleared.
   • Select No to keep your private data.

Text Messaging Service (TMS)
This features allows you to quickly send and receive messages and run database queries directly from your radios. The maximum length of characters for a text message is 200.

The types of text messages available:
   • A new text message (free form message).
   • A predefined message (quick text message).
   • An edited quick text message.

The main menu consists of the following options:
   • Inbox
   • Compose
   • Drafts
   • Sent

Note
See Status Icons on page 35 for more information on the TMS icons and TMS Menu Options on page 39 for more information on each menu option.

Accessing the Messaging Features
1 Perform one of the following actions:
   • Press the Data Feature button or the preprogrammed TMS Feature button to access the TMS feature screen.
   • Press and hold the Data Feature button or the preprogrammed TMS Feature button to access the Inbox.
Follow the procedure described next to access this feature via the radio menu.

1. Press the Menu Select button directly below TMS to access the TMS feature screen.

2. Press the Menu Select button directly below Back at any time to return to the previous screen.

3. Press the Menu Select button directly below Comp to see the compose options.

4. Press the Menu Select button directly below New to compose a new message. A blinking cursor appears on the Compose screen.

5. Use the keypad to type or edit your message.

6. Press the Menu Select button directly below Optn once the message is composed.

7. Press the Menu Select button directly below Send.

8. Perform one of the following actions:

   - During the numeric mode, except for 1, pressing the keypad only enters the numeric digits. Subsequent presses of the same key inserts the same digit to the text message (no multi-tap).

   - Composing and Sending a New Text Message

     During the uppercase and lowercase mode, multi-tapping the keys only scrolls through the letters. For example, A->B->C, a->b->c.
• ▲ or ▼ to scroll through the address list and highlight the required address.
• ▲ or ▼ to [Other Recpnt] and press the Menu Select button below Edit. When a blinking cursor appears in the Enter Address screen, use the keypad to type the address entry.

9 Press the Menu Select button directly below Send or press the PTT button to send the message.

The display shows the Send Message screen and Sending msg.

If the message is sent, you hear a tone and the display shows Msg sent.

If the message is not sent, you hear a low tone, the display shows Send failed and returns to the main TMS screen.

Note
You can append a priority status and/or a request reply to your message. See Priority Status and Request Reply of a New Text Message on page 86 for more information.

You can also select the Draft option to save your message in the Drafts folder to send it at a later time. See Accessing the Drafts Folder on page 91 for more information.

Sending a Quick Text Message

Quick Text messages are messages that are predefined and usually consist of messages that are used most frequently.

Each Quick Text message has a maximum length of 50 characters.

1 Perform one of the following actions:
   • To access this feature via a preprogrammed button, press the preprogrammed Quick Text button and proceed to Step 4.
   • To access this feature via the menu, proceed to the next step.

2 ▼ or ▲ to TMS and press the Menu Select button directly below TMS to access the TMS feature screen.

3 Perform one of the following actions:
• \( \uparrow \) or \( \downarrow \) to Comp and press the Menu Select button directly below Sel.
• Press the Menu Select button directly below Exit to return to the Home screen.

4 \( \uparrow \) or \( \downarrow \) to List.

5 \( \uparrow \) or \( \downarrow \) to scroll through the list of messages and press the Menu Select button directly below Sel to select the required message.

The message appears on the Compose screen, with a blinking cursor at the end of it. Use the keypad to edit the message, if required.

6 Press the Menu Select button directly below Optn.

7 \( \uparrow \) or \( \downarrow \) to Send and press the Menu Select button directly below Sel.

8 Perform one of the following actions:

• \( \uparrow \) or \( \downarrow \) to scroll through the address list and highlight the required address.

• \( \uparrow \) or \( \downarrow \) to [Other Recpnt] and press the Menu Select button below Edit. When a blinking cursor appears on the Enter Address screen. Use the keypad to type the address entry.

9 Press the Menu Select button directly below Send or press the PTT button to send the message.

The display shows the Send Message screen and Sending msg.

If the message is sent, you hear a tone and the display shows Msg sent.

If the message is not sent, you hear a low tone, the display shows Send failed and returns to the main TMS screen.

Note
You can append a priority status and/or a request reply to your message. See Priority Status and Request Reply of a New Text Message on page 86 for more information.

Priority Status and Request Reply of a New Text Message

Before sending your message, you can append a priority status and/or a request reply to your message.
Appending a Priority Status to a Text Message

Ensure that an outgoing message is composed to allow you to perform this procedure. See Composing and Sending a New Text Message on page 84 for more information.

Note

The Priority Status icon on a message does not imply that the message gets higher priority over the other messages when it is being transmitted. It is just an indication that can be embedded into a message to let the receiver know that the message is important.

1 Press the Menu Select button directly below Optn.

2 or to Impt and press the Menu Select button directly below Impt to indicate the message as important.

The priority status icon appears beside the normal message icon on the label bar.

Removing a Priority Status from a Text Message

Ensure there is an outgoing message composed to allow you to perform this procedure. See Composing and Sending a New Text Message on page 84 for more information.

1 Press the Menu Select button directly below Optn.

2 or to Impt and press the Menu Select button directly below Impt to remove the priority status icon.

The display shows the normal message icon on the label bar.

Appending a Request Reply to a Text Message

Ensure that an outgoing message is composed to allow you to perform this procedure. See Composing and Sending a New Text Message on page 84 for more information.

1 Press the Menu Select button directly below Optn.

2 or to RqRp and press the Menu Select button directly below RqRp to request for a reply.

The request reply icon appears beside the normal message icon on the label bar.
**Removing a Request Reply from a Text Message**

Ensure that an outgoing message is composed to allow you to perform this procedure. See *Composing and Sending a New Text Message* on page 84 for more information.

1. Press the **Menu Select** button directly below **Optn**.

2. **▲** or **▼** to **RqRp** and press the **Menu Select** button directly below **RqRp** to remove the reply status icon.

The display shows the normal message icon on the label bar.

**Appending a Priority Status and a Reply Request to a Text Message**

Ensure that an outgoing message is composed to allow you to perform this procedure. See *Composing and Sending a New Text Message* on page 84 for more information.

1. Press the **Menu Select** button directly below **Optn**.

2. **▲** or **▼** to **Imp** and press the **Menu Select** button directly below **Imp** to indicate the message as important.

3. **▲** or **▼** to **RqRp** and press the **Menu Select** button directly below **RqRp** to request for a reply.

The priority status and request reply icons appear beside the normal message icon on the label bar.

**Removing a Priority Status and a Reply Request from a Text Message**

Ensure that a outgoing message is composed to allow you to perform this procedure. See *Composing and Sending a New Text Message* on page 84 for more information.

1. Press the **Menu Select** button directly below **Optn**.

2. **▲** or **▼** to **Imp** and press the **Menu Select** button directly below **Imp** to remove the priority status icon.

3. **▲** or **▼** to **RqRp** and press the **Menu Select** button directly below **RqRp** to remove the reply status icon.
The display shows the normal message icon on the label bar.

**Managing Text Messages**

**Receiving a Text Message**

*Note*  
When you receive a message that is flagged with the “Request Reply” icon, you must manually respond to the sender that you have received the message. The system will not automatically send back a notification that the radio has received such message.

The following methods are options on how to receive a text message. The result of all the methods is the same. You can use the options interchangeably depending on your preference and the programmed functions.

- Receiving a text message via the Data Feature button or the TMS Feature button:
  a) When you receive a message, press and hold the preprogrammed Data Feature button or the TMS Feature button to access the Inbox. The display shows a list of aliases or IDs, with the sender of the latest received message on top.

- Receiving a text message via the radio menu:
  a) When the new message icon appears and the display shows momentary New msg, press the Menu Select button directly below TMS to access the Inbox. The display shows a list of aliases or IDs, with the sender of the latest received message on top.

**Viewing a Text Message from the Inbox**

The Inbox can hold up to thirty (30) messages.

*Note*  
or to read the message if the content fills more than one screen.

1. Perform one of the following actions:
   - Press the preprogrammed Data Feature button or the TMS Feature button to access the TMS feature screen. or to Inbx and press the Menu Select button below Sel.
   - Press and hold the preprogrammed Data Feature button or the TMS Feature button to access the Inbox.
• \( \uparrow \) or \( \downarrow \) to TMS and press the Menu Select button directly below TMS to access the TMS feature screen. \( \uparrow \) or \( \downarrow \) to Inbx and press the Menu Select button below Sel.

The display shows a list of aliases or IDs, with the sender of the latest received message on top.

2 \( \uparrow \) or \( \downarrow \) to the required aliases or ID and press the Menu Select button below Sel to view the message.

While on the view message screen, press the Menu Select button directly below Rply, Del, or Back to access the option.

• Select Rply to reply the message.
• Select Del to delete the message.
• Select Back to return to the previous screen.

Note
The icon at the top right corner of the screen indicates the status of the message. See Text Messaging Service (TMS) Indicators on page 38 for more information.

Replying to a Received Text Message

Note
The original date and time stamp, address and message content is automatically appended to the reply message.

1 \( \uparrow \) or \( \downarrow \) to the required aliases or ID and press the Menu Select button below Sel to view the message.

2 Press the Menu Select button directly below Rply to reply to a message.

3 Perform one of the following actions:

• \( \uparrow \) or \( \downarrow \) to New and press the Menu Select button directly below Sel.
• \( \uparrow \) or \( \downarrow \) to List and press the Menu Select button directly below Sel for a predefined message.
• \( \uparrow \) or \( \downarrow \) to scroll through the list of messages and press the Menu Select button directly below Sel to select the required message.

One of the following scenarios occurs:

• A blinking cursor appears on the Compose screen.
• The predefined message appears on the Compose screen, with a blinking cursor at the end of it.

4 Use the keypad to type or edit your message.

5 Press the Menu Select button directly below Optn once you have completed the message.

6 ▲ or ▼ to Send and press the Menu Select button directly below Send to send the message.

The display shows the Send Message screen and Sending msg.

Note
Press the Menu Select button directly below Back at any time to return to the previous screen.

You can append a priority status and/or a request reply to your message. See Priority Status and Request Reply of a New Text Message on page 86 for more information.

Accessing the Drafts Folder
This folder stores the messages that were saved previously. The Drafts folder can hold up to 10 messages. The oldest draft in the folder is deleted when the 11th message comes in.

1 ▼ or ▲ to TMS.

2 Press the Menu Select button directly below TMS to access the TMS feature screen.

3 ▲ or ▼ to Drft and press the Menu Select button below Drft. The display shows a list of drafts, with the latest text message drafted on top.

4 ▲ or ▼ to the required text message and press the Menu Select button below Sel to view the message.

Press the Menu Select button directly below Edit, Del, or Back to access the option.

• Select Edit to edit the message before sending it.
• Select Del to delete the message.
• Select Back to return to the previous screen.
**Sent Text Messages**

Once a message is sent to another radio, it is saved in the Sent folder. The most recent sent text message is always added to the top of the Sent list.

The Sent folder is capable of storing a maximum of ten (10) last sent messages. When the folder is full, the oldest message in the folder is deleted when the 11th message comes in.

**Viewing a Sent Text Message**

1. Perform one of the following actions:
   - Press the preprogrammed **Data Feature** button or the **TMS Feature** button to access the TMS feature screen.
   - **⬆️** or **⬇️** to **TMS** and press the **Menu Select** button directly below **TMS** to access the TMS feature screen.

2. **⬆️** or **⬇️** to **Sent** and press the **Menu Select** button below **Sent**.
   The display shows a list of aliases or IDs, with the recipient of latest sent message on top.

3. **⬆️** or **⬇️** to the required aliases or ID and press the **Menu Select** button below **Sel** to view the message.
   While on the view message screen, press the **Menu Select** button directly below **Optn**, **Del** or **Back** to access the option.
   - Select **Optn** to configure the message settings.
   - Select **Del** to delete the message.
   - Select **Back** to return to the previous screen.

   **Note**
   The icon at the top right corner of the screen indicates the status of the message. See *Text Messaging Service (TMS) Indicators* on page 38 for more information.

**Sending a Sent Text Message**

1. Press the **Menu Select** button directly below **Optn** while viewing the message.

2. **⬆️** or **⬇️** to **Send** and press the **Menu Select** button directly below **Send**.

3. Perform one of the following actions:
or to scroll through the address list and highlight the required address.
• ▲ or ▼ to [Other Recipient] and press the Menu Select button below Edit. When a blinking cursor appears in the Enter Address screen, use the keypad to type the address entry.

4 Press the Menu Select button below Send or the PTT button to send the message.
The display shows the Send Message screen and Sending msg.

Note
Press the Menu Select button directly below Back at any time to return to the previous screen.

You can append a priority status and/or a request reply to your message. See Priority Status and Request Reply of a New Text Message on page 86 for more information.

Deleting Text Messages

1 From the Inbox, Draft, or Sent screen, ▲ or ▼ to scroll through the messages.

2 Press the Menu Select button directly below Del to view the delete options.

3 Perform one of the following actions:
• Press the Menu Select button directly below Curr to delete the current message.
• Press the Menu Select button directly below All to delete all the messages.

Secure Operations

Secure radio operation provides the highest commercially available level of voice security on both trunked and conventional channels.

Unlike other forms of security, Motorola digital encryption provides signaling that makes it virtually impossible for others to decode any part of an encrypted message.

Enabling Secure Transmission

1 ▲ or ▼ to Sec and press the Menu Select button directly below Sec.
The display shows Q and the current key if multi-key has been enabled.
2 Monitor the mode to be sure it is not in use.

3 Press PTT button to transmit.

Note
If the selected channel is preprogrammed for clear-only operation – when you press the PTT button, an invalid mode tone sounds and the display shows Clear TX only.

The radio does not transmit until you disable the secure mode.

The radio can be configured to ignore the clear voice or unsecured transmission when the radio is in secured transmission. Check with your agent for details.

Accessing the Secure Feature

1 ◄ or ► to Sec.

2 Press and hold the Menu Select button directly below Sec to display Secure feature screen.

The display shows the Secure screen.

Managing Encryption

Loading the Encryption Key(s)

Note
Refer to the key-variable loader (KVL) manual for equipment connections and setup.

1 Attach the KVL to your radio. The display shows Keyloading, and all other radio functions are locked out, except for power down, and volume.

2 Press the Menu Select button below Target.

3 Press the Menu Select button below Load.

4 Perform one of the following actions:
   • Press the Menu Select button below Key for single-key.
   • Press the Menu Select button below Group for multikey.

5 ◄ or ► to the required key or group.

6 Press the Menu Select button below Load to load the key to your radio.
When the key has been loaded successfully, one of the following scenarios occurs:

- You hear a short tone for single-key radios.
- You hear an alternating tone for multikey radios.

**Multikey Feature**

This feature allows the radio to be equipped with different encryption keys and supports the DES-OFB algorithm.

There are two types:

**Conventional Multikey**

The encryption keys can be tied (strapped), on a one-per-channel basis, through Customer Programming Software. In addition, you can have operator-selectable keys, operator-selectable keysets, and operator-selectable key erasure. If talkgroups are enabled in conventional, then the encryption keys are strapped to the talkgroups.

**Trunked Multikey**

If you use your radio for both conventional and trunked applications, you have to strap your encryption keys for trunking on a per-talkgroup or announcement-group basis. In addition, you may strap a different key to other features, such as dynamic regrouping, failsoft, or emergency talkgroup. You can have operator-selectable key erasure.

### Selecting an Encryption Key

1. Press the **Key** button to select the encryption key.

2. Press the **Menu Select** button directly below **Key**. The display shows the last user-selected and stored encryption key, and the available menu selections.

3. Use the keypad to enter the number of the desired key.

4. Perform one of the following actions:
   - Press the **Menu Select** button directly below **Sel** to save the newly selected key and return to the **Home** screen.
• Press 🏛, the PTT button, or the Menu Select button directly below Exit.

**Note**
When the selected key is erased, you hear a momentary keyfail tone and the display shows Key fail.

When the selected key is not allowed, you hear a momentary illegal key tone and the display shows Illegal key.

**Selecting a Keyset**
This feature allows you to select one or more groups of several encryption keys from among the available keys stored in the radio.

For example, you could have a group of three keys structured to one keyset, and another group of three different keys structured to another keyset; by changing keysets, you would automatically switch from one set of keys to the other.

Every channel to which one of the original keys was tied now has the equivalent new key instead.

1) or  to KSet and press the Menu Select button directly below KSet.

The display shows the last user-selected and stored keyset, and the available keyset menu selections.

2) or  to scroll through the keysets or use the keypad to enter the number of the desired keyset.

3) Press the Menu Select button directly below Sel to save the newly selected keyset. The radio exits keyset selection and returns to the Home screen.

**Note**
Press 🏛, the PTT button, or the Exit menu selection to exit this menu at any time without changing the keyset selection.

**Erasing the Selected Encryption Keys**
This feature allows you to erase all or selected encryption keys.

Erasing the selected encryption keys via the radio menu:

a)  or  to Eras and press the Menu Select button directly below Eras.
The display shows the last user-selected and stored encryption key, and the available menu selections.

b) ↑ or ↓ to the desired encryption key or use the keypad to enter the number of the desired key.

c) Press the **Menu Select** button directly below **All** to delete all keys, or press the **Menu Select** button directly below **Sngl** to delete current shown key.

You can abort this screen and return to Home screen by pressing the **Menu Select** button directly below **Abrt**.

---

**Requesting an Over-the-Air Rekey (ASTRO Conventional Only)**

Ensure that the Unique Shadow Key (USK) is loaded into the radio with the key-variable loader (KVL) before the rekey request can be sent. Refer to your local key management supervisor for more information.

This feature, also known as OTAR, allows the dispatcher to reprogram the encryption keys in the radio remotely. The dispatcher performs the rekey operation upon receiving a rekey request from the user.

1. ▼ or ▲ to **Reky**.

2. Press the **Menu Select** button directly below **Reky**.

3. Perform one of the following actions:
   - Press the **PTT** button to send the rekey request.
   - Press the **PTT** button again, or the ▼ or **Emergency** button, to exit the feature and transmit in normal mode.

If the rekey operation fails, you hear a bad-key tone and the display shows **Rekey fail**.

**Note**
The rekey operation failure indicates that your radio does not contain the Unique Shadow Key (USK).

---

**MDC Over-the-Air Rekeying (OTAR) Page**

This feature allows you to view or define MDC Over-the-Air Rekeying (OTAR) features. It is applied only when operating in secure encrypted mode and only
for conventional communications. In addition to Rekey Requests, OTAR transmissions include Delayed Acknowledgements, and Power-up Acknowledgements.

Some of the options selected may also need to be set up at the Key Management Controller (KMC) site to work properly.

**Note**
This feature must be preprogrammed by a qualified radio technician. Check with your dealer or system administrator for more information.

**Infinite UKEK Retention**
This feature enables Unique Key Encryption Key (UKEK) to be permanently stored in the radio even when all of the encryption keys is erased. Without this UKEK key, the radio could not be over the air rekeyed.

**Note**
This feature must be preprogrammed by a qualified radio technician. Check with your dealer or system administrator for more information.

**Hear Clear**

**Companding**
Reduces the channel noise, e.g. OTA transmission, that is predominantly present in UHF2 and 900 MHz channel with the following features.

**Compressor**
Reduces the background noise flow and the speech signal at transmitting radio.

**Expander**
Expands the speech while the noise flow remains the same at receiving radio.
Random FM Noise Canceller (Flutter Fighter)
Reduces the unwanted effects of random FM noise pulses caused by channel fading under high Signal-to-Noise (S/N) conditions such as in a moving transportation. The fading effects, heard as audio pops and clicks, are cancelled without affecting the desired audio signal.

The Random FM Noise Canceller operates only in receive mode.

Global Positioning System (GPS)
This feature uses information from the Global Positioning System (GPS) satellites orbiting the Earth to determine the approximate geographical location of your radio, expressed as latitude and longitude or MGRS format per request from customers. The availability and accuracy of this location information (and the amount of time that it takes to calculate it) varies depending on the environment in which you are using the GPS feature.

For example, GPS location fixes are very difficult to obtain indoors, in covered locations, between high buildings, or in situations where you have not established a clear broad view of the sky.

GPS Operation
The GPS technology uses radio signals from earth orbiting satellites, to establish the location coordinates, maximizing your view of clear unobstructed sky is essential for optimum performance.

Where adequate signals from multiple satellites are not available (usually because you cannot establish a view of a wide area of the sky), the GPS feature of your radio will not work. Such situations include but are not limited to:

- Underground locations
- Inside of buildings, trains, or other covered vehicles
- Under any other metal or concrete roof or structure
- Between tall buildings or under dense tree-cover
- In temperature extremes outside the operating limits of your radio

Even where location information can be calculated in such situations, it may take longer to do so, and your location estimate may not be as accurate. Therefore,
in any emergency situation, always report your location to your dispatcher.

Keep in mind that the accuracy of the location information and the time it takes to obtain it varies depending upon circumstances, particularly the ability to receive signals from an adequate number of satellites.

**Note**

Even where adequate signals from multiple satellites are available, your GPS feature only provides an approximate location, usually within 20 meters from your actual location, but sometimes farther away.

The satellites used by the GPS feature are controlled by the U.S. government and are subject to changes implemented in accordance with the Department of Defense GPS user policy and the Federal Radio Navigation Plan. These changes may affect the performance of the GPS feature on your radio.

**GPS Performance Enhancement**

Sometimes, the GPS feature may be unable to complete a location calculation successfully. You then see a message indicating that your radio cannot connect to enough visible satellites.

To maximize the ability of your radio to determine a fix, take note of the following guidelines:

- For your initial fix, hold the radio in the face position.
- Stay in the open. The GPS feature works best where there is nothing between your radio and a large amount of open sky.

**The Outdoor Location Feature (Using GPS)**

This feature allows you to determine your current location using a location menu, as well as your current distance and bearing in relation to another location. Radio location may be requested and reported over-the-air.

Your radio stores up to a maximum of sixty (60) programmable location coordinates, also known as waypoints. When the memory is full, the next waypoints automatically replaces the oldest waypoints in the radio.

The radio also stores four (4) preprogrammed waypoints. These coordinates cannot be deleted.

The following table shows the differences between programmable waypoints and preprogrammed waypoints.
### Programmable Waypoints vs Preprogrammed Waypoints

<table>
<thead>
<tr>
<th>Programmable Waypoints</th>
<th>Preprogrammed Waypoints</th>
</tr>
</thead>
</table>
| User-configurable location coordinates. | Fixed location coordinates:  
  - Home  
  - Emergency  
  - Last Known Location  
  - Destination |
| Only the alias is editable, not the coordinates. | The Home and Destination coordinates are editable. |
| Coordinates can be deleted one at a time, or all at once. | Coordinates cannot be deleted. |

**Note**

The radio automatically exits the feature, if the feature inactivity timer is enabled, when the radio is left idle and the timer expires. You hear the Menu Inactive Exit Tone upon feature exit.

---

### Accessing the Outdoor Location Feature

**Note**

An **ON** radio menu may be present on the Location menu screen if it is preprogrammed by the dealer or system administrator.

1. **Or** to **Loc**.

2. Press the **Menu Select** button directly below **Loc**.
   
   The display shows **Location off <Latitude>**.

3. Press the **Menu Select** button directly below **On** to turn on the GPS.
   
   The display shows **Previous loc <Latitude>**.

4. **Or** to check the longitude, time and date of the last successful location fix.

5. To obtain a new location fix, press the **Menu Select** button directly below **Rfsh**.
   
   The top line temporarily displays **Please wait** while the new location is being determined. While the new location is being determined, the location signal can be a solid or blinking icon.
Once the location coordinates are fixed, the display shows the current latitude. Toggle to see the longitude, time and date.

The location coordinates are updated automatically every 5 seconds while the location signal is present.

6 To return to the Home screen, press  or the PTT button, or the Menu Select button directly below Exit.

Turning Off GPS

1 to Loc.

2 Press the Menu Select button directly below Loc. The display shows Previous loc <Latitude>.

3 to check the time and date of the last successful location fix.

4 Press the Menu Select button directly below Optn.

5 to Turn Off GPS (if preprogrammed).

6 Press the Menu Select button directly below Sel to turn off the GPS. The display shows Location off.

7 To return to the Home screen, press  or the PTT button, or the Menu Select button directly below Exit.

Saving a Waypoint

Ensure that your radio shows the current location on the screen.

1 Press the Menu Select button directly below Optn.

2 Perform one of the following actions:
   • to Save as Waypt and press the Menu Select button directly below Sel.
   • to Save as Home and press the Menu Select button directly below Sel and proceed to 5.
   • to Save as Dest. and press the Menu Select button directly below Sel and proceed to 5.
A blinking cursor appears in the screen.

3 Use the keypad to edit the auto-generated waypoint, if required, or press the Menu Select button directly below Cnc1 to return to the Location main screen.

4 Press the Menu Select button directly below OK once you are done. One of the following scenarios occur:
   - The display shows `Saved as <Waypoint name>`.
   - The display shows `Saved as Home`.
   - The display shows `Saved as Dest`.

5 To return to the Home screen, press 🏛️, the PTT button, the preprogrammed GPS button or the Menu Select button directly below Exit.

Viewing a Saved Waypoint

Ensure your radio shows the current location on the screen.

1 Press the Menu Select button directly below Optn.

2 ▲ or ◄ to Waypoints and press the Menu Select button directly below Sel. The display shows a list of waypoints.

3 Perform one of the following actions:
   • ▲ or ◄ to scroll through the list.
   • ▲ or ◄ to select a waypoint to view the location information in full.

4 Press the Menu Select button directly below Optn.

5 To view the longitude, time and date of the selected waypoint, ▲ or ◄ to View and press the Menu Select button directly below Sel.

6 To return to the previous screen, press the Menu Select button directly below Back, or to return to the Home screen, press 🏛️ or the PTT button.

Editing the Alias of a Waypoint

Ensure your radio shows the current location on the screen.

1 Press the Menu Select button directly below Optn.
2 ▲ or ▼ to Waypoints and press the Menu Select button directly below Sel. The display shows a list of waypoints.

3 ▲ or ▼ to the required saved waypoint, and press the Menu Select button directly below Optn.

4 ▲ or ▼ to Edit name and press the Menu Select button directly below Sel. A blinking cursor appears in the Edit Name screen.

5 Use the keypad to edit the alias.

6 Perform one of the following actions:
   • Press the Menu Select button directly below OK once you are done.
   • Press the Menu Select button directly below Cncl to return to the Waypoints main screen.

7 The display shows <Waypoint name> Updated and the radio returns to the Waypoints main screen.

8 Perform one of the following actions:
   • Press the Menu Select button directly below Back to return to the previous screen.
   • Press Home or the PTT button to return to the Home screen.

Editing the Coordinates of a Waypoint

Note
Only the preprogrammed coordinates of Home and Destination can be edited by the user.

Ensure your radio shows the current location on the screen.

1 Press the Menu Select button directly below Optn.

2 ▲ or ▼ to Waypoints and press the Menu Select button directly below Sel. The display shows a list of waypoints.

3 Perform one of the following actions:
   • ▲ or ▼ to [Home] and press the Menu Select button directly below Optn.
   • ▲ or ▼ to [Destination] and press the Menu Select button directly below Optn.
4  

4 or  to Edit location and press the Menu Select button directly below Sel. The first number blinks.

5 Utilize the following control buttons to select the number/coordinates if required, then press the Menu Select button directly below Edit to change the number/coordinates.

• Press  to move to the previous number/coordinates.
• Press  to move to the next number/coordinates.
• Press  or  to change the North (N), South (S), East (E) or West (W) direction.

A blinking cursor appears in the Edit Location screen.

6 Utilize the following control buttons or menu to change the number/coordinates if required then press the Menu Select button directly below OK once.

• Press  to move one space to the left.
• Press  to move one space to the right.

• Press the Menu Select button directly below Del to delete any unwanted characters.
• Press the Menu Select button directly below Cncl to return to the previous screen.

7 Press the Menu Select button directly below OK once complete setting up the new Home or Destination. One of the following scenarios occurs:

• The display shows [Home] Updated and the radio returns to the Waypoints main screen.
• The display shows [Destination] Updated and the radio returns to the Waypoints main screen.

Deleting a Single Saved Waypoint

Ensure your radio shows the current location on the screen.

1 Press the Menu Select button directly below Optn.

2 or  to Waypoints and press the Menu Select button directly below Sel. The display shows a list of waypoints.
3 Perform one of the following actions:
   • ▲ or ▼ to the required saved waypoint, and press the Menu Select button directly below Optn. ▲ or ▼ to Edit name and press the Menu Select button directly below Del.
   • Press the Menu Select button directly below Del.

4 The display shows <Waypoint name> Confirm del?

5 Press the Menu Select button directly below Yes to delete the waypoint or press the Menu Select button directly below No to return to the Waypoints main screen.

The display shows <Waypoint name>deleted.

Deleting All Saved Waypoints

Ensure your radio shows the current location on the screen.

Note
You cannot delete any of the preprogrammed waypoints.

1 Press the Menu Select button directly below Optn.

2 ▲ or ▼ to Waypoints and press the Menu Select button directly below Sel. The display shows a list of waypoints.

3 ▲ or ▼ to the required saved waypoint, and press the Menu Select button directly below Optn.

4 ▲ or ▼ to Delete All and press the Menu Select button directly below Sel. The display shows All saved wayp confirm del?.

5 Press the Menu Select button directly below Yes to delete all waypoints or press the Menu Select button directly below No to return to the Waypoints main screen.

The display shows All saved waypnts deleted.

Measuring the Distance and Bearing from a Saved Waypoint

Ensure your radio shows the current location on the screen.
1 Press the **Menu Select** button directly below **Optn**.

2 Up or Down to **Dist frm here** and press the **Menu Select** button directly below **Sel**.
   The display shows a list of waypoints.

3 Up or Down to the required waypoint and press the **Menu Select** button directly below **Sel**.
   The display shows the distance and bearing from the current to the selected coordinates.

**Location Feature in Emergency Mode**

When the Emergency feature is activated by pressing the emergency button, the radio exits the Location menu and returns to the Home (default) screen so that you can see which channel the emergency signal is going out on.

However, you may re-enter the Location menu while still in emergency mode, provided that Silent Emergency has not been activated.

If you have turned Location off using the **ON/OFF** menu key, it automatically turns back on when Emergency is activated.

If there is a solid location signal during Emergency, the current location and the location information received is saved as Emergency and Last Known Location waypoints, respectively.

**Peer-Location on the Display (ASTRO Conventional only)**

This feature is only available for radio-to-radio voice transmissions, dispatch call and selective call in conventional ASTRO system. For radio-to-radio transmission, in order to allow the radio to show peer-location, the voice should be directly sent from one radio to another radio without passing through any infrastructure facility such as repeaters, phone or DVRS system. Both the transmitting radio and receiving radio must be configured to enable them to send and/or receive the GPS coordinates. You can check with your nearest qualified technician for more details.

**Note**

If the receiving radio is operating in a Mixed Mode channel, only if its voice transmission is via conventional ASTRO system then it can receive the location coordinates of its peers.

This feature is also operable in a Scan Active channel or Scan Talkback channel.
Upon receiving a voice transmission with GPS coordinates enabled on the receiving radio, the display shows the coordinates available in full or in short coordinates. There are two different formats available. Refer to the following list for the details shown in the Peer-Location quick text. Consult your agent to pick the best format to configure to your radio.

**Full location coordinates**
- PTT ID (This is optional.)
- Longitude and latitude
- Relative distance or direction.

**Short location coordinates**
- PTT ID (This is optional.)
- Longitude and latitude

**Note**
If the transmitting radio is stale at its location after a period of time, the receiving radio display shows ID:<PTT ID> Last Known Loc: <Coordinates>. The ID:<PTT ID> and <distance> are optional details depending on the requirements of usage.

If the transmitting radio does not have GPS or the receiving radio could not decode the GPS signal of the received signal, the receiving radio display shows ID:<PTT ID> Unknown Loc. The PTT ID is optional to be shown on the display per requirements of usage.

### Geofence (ASTRO 25 Trunking System)

Geofence is a virtual perimeter based on the GPS to define a geographical area on earth.

When the radio enters the predefined Geofence area, your radio receives the Dynamic Regroup command from the system and immediately connects to a Dynamic Regroup talkgroup. The radio display shows the new selected Dynamic Regrouped talkgroup with green intelligent light for your attention.

On top of that, additional features are Voice Announcement of the new channel, and also direct content display of a text message to indicate that you are currently at Geofence area. Check with your nearest qualified technician on the requirements for these enhancements to work in Geofence.
Any new text messages received at Geofence shall have its content displayed immediately on the radio display.

**Note**  
If the radio is set up in DVRS, only mobile radio is supported for this feature.

**Entering the Geofence Area**

The Voice Announcement and TMS display in this feature are optional. They must be configured to enable you to hear and see these indicators.

When the radio enters a Geofence area, the radio immediately sends a message `ACK` back to the system.

The radio searches the current zone for the channel with same talkgroup assigned as the Dynamic Talkgroup and also with same system ID of current trunk system. Once matched, the radio display shows the first matched and connected channel alias.

If there is no channel with matched Talkgroup ID and trunk system ID, the radio display shows the channel alias of `<DYNAMIC talkgroup>`.

Once the radio is connected, you hear a dynamic regroup tone, the radio display shows `<DYNAMIC channel>` with temporary green color intelligent backlight and you hear a Voice Announcement.

**Note**  
When the radio loss the GPS signal the GPS icon blinks and the radio sounds two high-pitched tones repetitively to indicate GPS fails to operate. The radio display shows red intelligent light.

**Note**  
If the first matched channel is not configured with Voice Announcement, no Voice Announcement is played.

The system sends a message to your radio. The radio display shows a direct text message content without any user operation. This message indicates you are currently present in a Geofence area. This TMS remains open on the display until user presses exit/home to exit this screen.

**Note**  
If there is another incoming text message before you exit the previous message, the message screen shall be refreshed to show the latest message.
The following procedure guides you to exit the text message received.

Press the **Menu Select** button below **Exit** or **Home** to return to the Home screen.

The other operations are the same as normal dynamic regroup command.

When the radio exits the Geofence area, your radio reverts to original channel or newly assigned talkgroup. The radio display shows the new channel together with Voice Announcement to indicate the changes. Voice Announcement of the new channel only works if that channel is configured with Voice Announcement.

### Trunking System Controls

#### Using the Failsoft System

The failsoft system ensures continuous radio communications during a trunked system failure. If a trunking system fails completely, the radio goes into failsoft operation and automatically switches to its failsoft channel.

During failsoft operation, your radio transmits and receives in conventional operation on a predetermined frequency. You hear a medium-pitched tone and the display shows **Failsoft**.

When the trunking system returns to normal operation, your radio automatically leaves failsoft operation and returns to trunked operation.

To continue, in Failsoft, to communicate with other talkgroups, refer to the following procedure.

1. Rotate the **MFK** to change to a different repeater frequency.
2. Press the **PTT** button to talk, and release the button to listen.

#### Out-of-Range Radio

When your radio goes out of the range of the system, it can no longer lock onto a control channel.

You hear a low-pitched tone and/or the display shows the currently selected zone/channel combination and **Out of range**. Your radio remains in this out-of-range condition until it locks onto a control channel, it locks onto a failsoft channel, or it is turned off.

### SmartZone
The SmartZone™ feature extends communications beyond the reach of a single-trunked site (antenna location) when operating in a SmartZone system. SmartZone units provide expanded wide-area coverage.

SmartZone automatically switches the radio to a different site when the current site signal becomes unacceptable. This usually happens when the vehicle in which the radio is located is driven out of the range of one site, and into the range of another.

Under normal conditions, a SmartZone-enabled radio functions invisibly to the operator. However, the operator does have some manual controls on the Control Head – the RSSI menu entry. This button can be used to check, or change, the SmartZone operation.

**Site Trunking Feature**

If the zone controller loses communication with any site, that site reverts to site trunking.

The display shows the currently selected zone/channel combination and **Site trunking**.

When this occurs, you can communicate only with other radios within your trunking site.

**Locking and Unlocking a Site**

This feature allows your radio to lock onto a specific site and not roam among wide-area talkgroup sites. This feature should be used with caution, since it inhibits roaming to another site in a wide-area system.

You can toggle the lock state between locked and unlocked by pressing the preprogrammed **Site Lock/Unlock** button.

Follow the following procedure to lock and unlock a site via the radio menu.

1. Press the **Menu Select** button directly below Site.

2. Perform one of the following actions:
   - To lock the site, press the **Menu Select** button directly below Lock. The display shows Site locked.

   **Note**
To unlock the site, press the **Menu Select** button directly below Unlk. The display shows Site unlocked.

The radio saves the new site lock state and returns to the Home screen.

**Site Display and Search Button**

The **Site Display** and **Site Search** button allows you to view the name of the current site or force your radio to change to a new one.

**Viewing the Current Site**

Perform one of the following actions:

- Press the preprogrammed **Site Search** button.
- \( \text{or} \) to RSSI and press the **Menu Select** button directly below RSSI.

The display shows momentary the name of the current site and its corresponding received signal strength indicator (RSSI).

**Changing the Current Site**

Perform one of the following actions:

- Press and hold down the preprogrammed **Site Search** button.
- Press and hold down the **Menu Select** button directly below RSSI.

When the radio finds a new site, it returns to the Home screen.

**Trunked Announcement**

The announcement capability allows you to make announcements to the entire user group, as well as monitor talkgroup calls and other announcements.

Announcement calls are handled in two different ways, depending on the trunked central controller configuration. The two types are called ruthless and non-ruthless preemption.

**Ruthless Preemption**

When a ruthless preemption announcement call is initiated, the requesting radio begins transmitting immediately. All associated talkgroup calls taking place on other channels are immediately halted, and the radios are steered to the announcement call.
Transmitting radios continue to transmit until the PTT button is released, at which time they also unmute for the announcement call. Individual calls (Private Conversation and telephone interconnect) are not affected.

Non-Ruthless Preemption

When a non-ruthless preemption announcement is initiated, the initiating unit receives a telephone-type busy tone, followed by a call back when all associated talkgroup conversations end.

Once an announcement call is pending, any attempts by other users to initiate a talkgroup call will result in a telephone-type busy tone. These users will not receive a call back until the announcement call is complete.

Initiating an Announcement

Ensure your radio has been programmed to allow announcement calls.

1. If channel is set as the primary mode, turn the MFK to locate the announcement-group mode.

2. Press the PTT button to initiate the announcement.

Ignition Switch Options

This feature allows the user to select the functionality of the radio based on the Ignition State of the radio user’s vehicle. The following options are available.

Blank

This option allows the user to power on and power off the radio through the Power button regardless of the current state of the Ignition.

Tx Inhibit

This option allows the user to power on and power off the radio through the Power button regardless of the current state of the Ignition. In addition, if the Ignition is not present, then all transmissions are inhibited. This includes receiving any Trunking dispatch communications since the radio will not affiliate with the Trunking systems.
PTT Tx Inhibit

This option allows the user to power on and power off the radio through the **Power** button regardless of the current state of the Ignition. In addition, if the Ignition is not present, then all **PTT** button transmissions are inhibited. However, the radio is able to affiliate with the Trunking systems.

**Required**

This option allows the user to power on the radio only if the Ignition is present. The radio can be powered off either through **Power** button press or when Ignition is lost. In addition, the radio automatically powers on when the Ignition is present only if the radio was turned off due to the ignition being removed.

This option allows the radio to power off when Inactivity Auto Power Off Timer expires, or, when Ignition Auto Power Off Timer expires.

**Soft Power Off**

This option allows the user to power on the radio either through **Power** button presses or when the Ignition is detected. Meanwhile, if the **Power** button was pressed or the Ignition was removed, the radio will be turned off.

This option allows the radio to power off when Inactivity Auto Power Off Timer expires, or, when Ignition Auto Power Off Timer expires.

**Ignition Only Power Up**

This option allows the user to power on the radio only when Ignition is detected and will power off when it is removed. The radio does not power on or off with the Power button press.

This option allows the radio to power off when Inactivity Auto Power Off Timer expires, or, when Ignition Auto Power Off Timer expires.

**Note**

While **Ignition** is not present, the radio powers-off with a radio-user **Power Off** button / knob selection if the radio was powered-up with an Emergency Power Up footswitch-press or Ignition Auto Power Off timer is running.

While **Ignition** is present, the radio powers-on with a radio-user **Power On** button / knob selection only if the radio was powered-down with Inactivity Auto Power Off timer.
Using Emergency Power Up

This feature allows the user to power on the radio and automatically transmits an emergency mode transmission on personalities with emergency enabled, with the use of a footswitch. In addition, when the Ignition Switch option is set to either Tx Inhibit or PTT Tx Inhibit, this feature will not be available to the users.

Press the footswitch to turn on the radio and launch Emergency.

A tone sounds and the display shows Emergency.

Auto Power Off Timer

Auto Power Off feature powers off the radio when no user actions occur during a preprogrammed length of time. There are two different versions of Auto Power Off:

Inactivity Auto Power Off Timer

This timer begins once the radio is power-on. While the timer is active any user interaction with the radio resets the timer.

Ignition Auto Power Off Timer

This timer begins once the vehicle key is removed, when the voltage at the ignition sense is removed. While the timer is active any user interaction with the radio resets the timer. When the vehicle key is reapplied, the voltage at the ignition is reconnected, this timer is stopped.

Although both Inactivity Auto Power Off and Ignition Auto Power Off can be enabled together, Ignition Auto Power Off timer is mutually exclusive with Inactivity Auto Power Off timer when both are enabled. During the last two minutes of the timer countdown, the radio generates continuous low tone and blinks Powering Off warning on the display until the timer expires or the timer is reset. The radio automatically powers off after the timer expires. The duration of the timer is preprogrammed.

Voice Announcement

This feature enables the radio to audibly indicate the current feature mode, zone or channel the user has just assigned. This audio indicator can be customized per customer requirements. This is typically useful
when the user is in a difficult condition to read the content shown on the display.

Each voice announcement is within a limit of three seconds maximum. The sum duration of all different voice announcements in a radio shall be no more than 1000 seconds.

**Note**
This feature must be preprogrammed by a qualified radio technician.

Check with your agent if Voice Announcement is available for the feature you need.

The two options of priority for the Voice Announcement available are:

**High** Enables the voice of the feature to announce even when the radio is receiving calls.

**Low** Disables the voice of the feature from announcing when the radio is receiving calls.

You hear a voice announcement when the features below are preprogrammed in the radio.

- The radio powers up. The radio announces the current zone and channel it is transmitting.
- Press the preprogrammed voice announcement button (which specifically programmed to playback the current zone and channel). The radio announces the current zone and channel it is transmitting.

**Note**
Pressing this preprogrammed playback button will always enable the voice feature to announce in High priority.

All the three programmable buttons at the side of the radio support this feature.

- Change to a new zone. The radio announces the current zone and channel it is transmitting.
- Change to a new channel remaining within the current zone. The radio announces the current channel.
- Press either the **Menu Select** button or preprogrammed button or switch of the radio to launch or terminate Scan, PL Disabled, Talkaround/Direct or Transmit Inhibit. The radio announces the corresponding feature activation or deactivation.
Site Selectable Alerts (ASTRO 25)

A Site Selectable Alert (SSA) is an Intelligent Lighting indicator together with audio alert sent to radios at a site or a few sites to notify the users when there is a special situation that they need to be aware of. Only authorized radios are enabled to send SSA.

Upon the activation of a SSA, the receiving radios display the alert alias and generate the periodic alert tone.

**Note**
Alert alias, alert tone, and alert period can be preprogrammed. Alert period is the duration for the radio to repeat the alert tone. An interval of 5 seconds might impact the battery life of the radio. Check with your dealer or system administrator for more details.

When mixing SSA with received voice audio, the SSA alert is reduced in volume to ensure that the voice message is still heard clearly. Therefore, it is important that the SSA audio files are created with clear loud audio to ensure they can still be heard clearly when played at reduced levels.

Sending SSA Notification to Single Site

1. Press the `or` to SSA.

2. Press the Menu Select button directly below SSA. The display shows the Site Alert screen.

3. Press the `or` to Start Alert and press the Menu Select button directly below Sel. The display shows the Select Site screen.

4. Press the `or` to the desired Site Alias. Press the Menu Select button directly below Sel. The display shows the Select Alert screen.

5. Press the `or` to select the desired Alert Alias and press the Menu Select button directly below Send. The display shows Sending req.

   If radio is out of range, roaming to a foreign system or in a failsoft situation, the display shows Req failed.

   If the request is successful, the display shows Req successful.

   If the site is not available, the display shows <Site Alias> not available.
If the site does not exist, the display shows <Site Alias> does not exist.

6 To return to the Home screen, press the Menu Select button directly below Exit.

If you are at the site designated to receive this alert, you can hear an alert tone repeated periodically. The display shows the <Alert Alias> with the intelligent lighting at Home screen.

Sending SSA Notification to Single Site Via Manual Entry

1 or to SSA.

2 Press the Menu Select button directly below SSA. The display shows the Site Alert screen.

3 or to Start Alert and press the Menu Select button directly below Sel. The display shows the Select Site screen.

4 or to [SiteID Entry] to send alert via manual entry. Press the Menu Select button directly below Edit. The display shows the Enter SiteID screen.

5 Key in the desired Site ID and press the Menu Select button directly below OK.

    If a correct Site ID is entered, the display shows the Select Alert screen.

    If a wrong Site ID is entered, the display shows Invalid ID and prompts to enter the Site ID again.

6 or to select the desired Alert Alias and press the Menu Select button directly below Send. The display shows Sending req.

    If radio is out of range, roaming to a foreign system or in a failsoft situation, the display shows Req failed.

    If the request is successful, the display shows Req successful.

    If the site is not available, the display shows <Site ID> not available.

    If the site does not exist, the display shows <Site ID> does not exist.

7 To return to the Home screen, press the Menu Select button directly below Exit.
If you are at the site designated to receive this alert, you can hear an alert tone repeated periodically. The display shows the `<Alert Alias>` with the intelligent lighting at Home screen.

**Sending SSA Notification to All Sites**

1. Press the Menu Select button directly below SSA.
   The display shows the Site Alert screen.

2. Press the Menu Select button directly below Sel.
   The display shows the Select Site screen.

3. Press the Menu Select button directly below Sel.
   The display shows the Select Alert screen.

4. Press the Menu Select button directly below Sel.
   The display shows Sending req.

5. Press the Menu Select button directly below Sel.
   The display shows Sending req.

6. To return to the Home screen, press the Menu Select button directly below Exit.

If the request is successful, the display shows Req successful.

If one or more sites are not available, the display shows Not all sites available. Repeat 3.

**Sending SSA Notification to All Available Sites**

1. Press the Menu Select button directly below SSA.
   The display shows the Site Alert screen.

2. Press the Menu Select button directly below Sel.
   The display shows the Select Site screen.

3. Press the Menu Select button directly below Sel.
   The display shows the Select Alert screen.

4. Press the Menu Select button directly below Sel.
   The display shows the Select Alert screen.
5 ▲ or ▼ to select the desired Alert Alias and press the **Menu Select** button directly below Send. The display shows **Sending req**.

If radio is out of range, roaming to a foreign system or in a failsoft situation, the display shows **Req failed**.

If the request is successful, the display shows **Req successful**.

6 To return to the Home screen, press the **Menu Select** button directly below Exit.

If you are at the site designated to receive this alert, you can hear an alert tone repeated periodically. The display shows the `<AlertAlias>` with the intelligent lighting at Home screen.

**Stopping SSA Notification of a Single Site**

1 ▲ or ▼ to SSA.

2 Press the **Menu Select** button directly below SSA. The display shows the **Site Alert** screen.

3 ▲ or ▼ to Stop Alert and press the **Menu Select** button directly below Sel.

The display shows the **Select Site** screen.

4 ▲ or ▼ to select the desired Site Alias and press the **Menu Select** button directly below Send. The display shows **Sending req**.

If radio is out of range, roaming to a foreign system or in a failsoft situation, the display shows **Req failed**.

If the request is successful, the display shows **Req successful**.

If the site is not available, the display shows `<Site Alias>` not available.

If the site does not exist, the display shows `<Site Alias>`does not exist.

5 To return to the Home screen, press the **Menu Select** button directly below Exit.

The SSA Alert for the designated site stops.

**Stopping SSA Notification of a Single Site Via Manual Entry**

1 ▲ or ▼ to SSA.
2 Press the **Menu Select** button directly below **SSA**. The display shows the **Site Alert** screen.

3 ▲ or ▼ to **Stop Alert** and press the **Menu Select** button directly below **Sel**. The display shows the **Select Site** screen.

4 ▲ or ▼ to **[SiteID Entry]** and press the **Menu Select** button directly below **Edit**. The display shows the **Enter SiteID** screen.

5 Key in the required Site ID and press the **Menu Select** button directly below **Send**.

One of the following scenarios occur:

- If a wrong Site ID is entered, the display shows **Invalid ID** and prompts to enter the Site ID again.
- If a correct Site ID is entered, the display shows **Sending req**.
- If the request is successful, the display shows **Req successful**.
- If the single site is not available, the display shows **<Site ID> not available**.
- If the single site does not exist, the display shows **<Site ID> does not exist**.

6 To return to the Home screen, press the **Menu Select** button directly below **Exit**.

The SSA Alert for the designated site stops.

### Stopping SSA Notification of All Sites

1 ▼ or ▲ to **SSA**.

2 Press the **Menu Select** button directly below **SSA**. The display shows the **Site Alert** screen.

3 ▲ or ▼ to **Stop Alert** and press the **Menu Select** button directly below **Sel**. The display shows the **Select Site** screen.

4 ▲ or ▼ to **[All Sites]** and press the **Menu Select** button directly below **Send**. The display shows **Sending req**.

If radio is out of range, roaming to a foreign system or in a failsoft situation, the display shows **Req failed**.

If the request is successful, the display shows **Req successful**.
If one or more sites are not available, the display shows **Not all sites available.** Repeat step 3.

5 To return to the Home screen, press the **Menu Select** button directly below **Exit.**

The SSA Alert for all sites stop.

### Stopping SSA Notification of All Available Sites

1 ➤ or ◄ to **SSA.**

2 Press the **Menu Select** button directly below **SSA.** The display shows the **Site Alert** screen.

3 ➤ or ◄ to **Stop Alert** and press the **Menu Select** button directly below **Sel.** The display shows the **Select Site** screen.

4 ➤ or ◄ to **[All Avail]** and press the **Menu Select** button directly below **Send.** The display shows **Sending req.**

If radio is out of range, roaming to a foreign system or in a failsoft situation, the display shows **Req failed.**

If the request is successful, the display shows **Req successful.**

5 To return to the Home screen, press the **Menu Select** button directly below **Exit.**

The SSA Alert for all available sites stop.

### Channel Change on Off Hook on All Channels

This feature enables the mode of the radio to be changed based on the HUB on/off-hook state on all control heads.

Whenever the radio goes off-hook, the radio changes to a preprogrammed zone channel specifically for off-hook state. When the user returns the radio to on-hook state, it reverts to its previous channel zone before the radio goes off-hook.

When the radio is in off-hook state, manual mode change (including mode change triggered by third party devices) is allowed. Radio reverts back to the last mode before off-hook once the radio goes on-hook.

**Note**

During PL Defeats and Suspend Scan during on-hook state, the radio is converted to work
in new channel and Channel Change on Off Hook feature is suspended until these conditions end.

We do not recommend that “Hub Suspend Scan” and ”Channel Change on Off Hook” to be enabled simultaneously.

During Dynamic Regroup channel selector lock state, Emergency, Transmit Inhibit, radio lock, or when external key loaded is attached to the radio, the Channel Change on Off Hook feature is suspended until these conditions end.

The Off Hook State for APX™ Dual Radio Setup

For Dual Radio, the state of the HUB on the unselected radio is always considered as on-hook. The state of the HUB of the selected radio is always reflected as the actual states of the HUB. When the HUB is placed off-hook, the selected radio makes channel change per CPS configuration, and the unselected radio does not trigger channel change.

With Channel Change on Off Hook enabled, when the HUB is placed off-hook, and there is radio switch, the new selected radio moves to the target channel zone on off hook, and the new unselected radio reverts to the last user selected channel before off-hook.

The Off Hook State for Multiple Radios Setup

When there are multi-control heads connected, the states of these HUBs reflect the active control head(s) state. Any HUB placed off-hook by active control head(s) makes the radio goes off-hook state. Only when all HUBs are placed on-hook, the radio can be in on-hook state.

Note

This feature needs to be carefully enabled.

Users must also be familiar with the functionality of this feature as they have to be aware that removing the microphone triggers mode change most of the time.

Low Voltage Threshold Warning

This feature is created for APX mobile radio to provide warning for low voltage threshold.
A specific external device is attached to the radio to monitor the automobile voltage. When the car battery went lower than a pre-defined threshold, the external device asserts the Vehicular Interface Port (VIP) input to the radio. When the voltage of the battery becomes normal, the external device de-asserts the VIP input to the radio.

The voltage threshold is customized in the external device settings.

When the VIP switch turns on, the VIP asserts input to the radio. The radio immediately initiates a 15 seconds of low Voltage Pre-alert Timer. If the status of the VIP changed before this time-out timer ends, the radio returns to normal operation.

If the status from the VIP unchanged when the time-out timer ends, the radio shows Low battery on the display and also sounds low battery/voltage alert tone. The radio sounds a short, high-pitched tone immediately after the PTT button is released.

**Note**
If the mobile radio does not have a control head connected, the bricks can only alert the user with battery alert tone and the transmit chirp.

### Next Button

If the O2 radio is programmed with this function, a permanent softkey appears as the first softkey from the right on the display. The softkeys appear at the bottom row of the display.

**Note**
If the softkeys of the radio are configured less than four softkeys, there shall be no Next button.

If there are more than four softkeys required on the radio, the Next button helps to toggle to next screen for the subsequent softkey(s) besides the first three softkeys. Pressing this button shall toggle the screens until the last softkey appears and then wraps back to the first four softkeys.

Softkey without any function appears as blank.

**Note**
When a radio is set up with multi control heads together with an O2 control head which were configured with a Next button, the Next button is also shown on the menus of other control heads.
Utilities

Viewing Recent Calls

This feature allows you to view the recent incoming and outgoing call information of the following call types:

• Call Alert
• Selective Call
• Private Call
• Phone Call (Outgoing Only)

Note
The radio can also be preprogrammed to log only the radio IDs associated with incoming Dispatch Calls. Check with your dealer or system administrator for more information.

Viewing recent calls via the radio menu:

a) ‹ or › to Rcnt.

b) Press the Menu Select button directly below Rcnt to access the Recent Calls feature screen.

c) ▲ or ▼ to scroll through the list.

d) To return to the Home screen, press the Menu Select button directly below Back, or the PTT button.

The radio automatically exits the feature, if the feature inactivity timer is enabled, when the radio is left idle and the timer expires. You will hear the Menu Inactive Exit Tone upon feature exit.

Selecting the Power Level

Note
This feature must be preprogrammed by a qualified radio technician.

This feature enables you to reduce the transmit power level for specific case that requires a lower power level. You can select the power level at which your radio transmits. The radio always turns on to the default setting.

Power level Low enables a shorter transmitting distance and to conserve power. Power level High enables a longer transmitting distance.

The following methods are options on how to select the power level. The result of all the methods is the same. You can use the options interchangeably.
depending on your preference and the programmed functions.

- Selecting the Power Level via the Transmit Power Level switch:
  a) Use the preprogrammed Transmit Power Level switch to toggle the power level between low and high power.

- Selecting the Power Level via the radio menu:
  a) \( \downarrow \) or \( \uparrow \) to \textit{Pwr}.
  b) Press the \textbf{Menu Select} button directly below \textit{Pwr}.

- Selecting the Power Level via the radio menu:
  The display shows \textit{Low power} and the low power icon or the display shows \textit{High power} and the high power icon.

**Selecting a Radio Profile**

This feature allows you to manually switch the visual and audio settings of the radio. The display, backlight, alert tones, and audio settings are defined according to the preprogrammed radio settings of each radio profile.

Please refer to a qualified technician for more information.

**Note**

The radio automatically exits the feature, if the feature inactivity timer is enabled, when the radio is left idle and the timer expires. You will hear the Menu Inactive Exit Tone upon feature exit.

The following methods are options on how to select a radio profile. The result of all the methods is the same. You can use the options interchangeably depending on your preference and the programmed functions.

- Selecting a radio profile via the preprogrammed Profile button:
  a) Press the preprogrammed Profile button.
  b) \( \uparrow \) or \( \downarrow \) to scroll through the menu selections.
  c) Press the \textbf{Menu Select} button directly below \textit{Sel} to select the required radio profile, or press the \textbf{Menu Select} button directly below \textit{Exit} to exit the screen without making any changes.

The radio returns to the Home screen. The profile name on the Home screen indicates the current selected radio profile.
Selecting a radio profile via the radio menu:

a)  

or  

to  

Prfl and press the  

Menu Select  

button directly below  

Prfl to access the  

Profiles feature screen.

b)  

or  

to scroll through the menu selections.

c) Press the  

Menu Select  

button directly below  

Sel to select the required radio profile, or press  

the  

Menu Select  

button directly below  

Exit to  

exit the screen without making any changes.

The radio returns to the Home screen. The profile name on the Home screen indicates the current selected radio profile.

Controlling the Display Backlight

You can enable or disable the radio’s display backlight as needed, if poor light conditions make the display or keypad difficult to read.

Depending on how your radio is preprogrammed, you can also maintain a minimum backlight level on the radio’s front display.

Press the  

Dimmer  

button to adjust the brightness of the display. Long press to toggle between day and night mode.

Turning the Keypad Tones On or Off

You can enable and disable keypad tones as needed.

• Turning the tones on or off via the preprogrammed  

Keypad Mute  

button:

a) To turn the tones off or on, press the  

preprogrammed  

Keypad Mute  

button.

• Turning the tones on or off via the radio menu:

a)  

or  

to  

Mute.

b) Press the  

Menu Select  

button directly below  

Mute.

The display shows momentary  

Tones off, indicating that the tones are disabled or the display shows momentary  

Tones on, and you hear a short tone indicating that the tones are enabled.

Turning Voice Mute On or Off

You can enable and disable voice transmission, if needed.

• Turning Voice Mute on or off via the preprogrammed  

Voice Mute  

button:
a) To turn the feature off or on, press the preprogrammed **Voice Mute** button.

- Turning Voice Mute on or off via the radio menu:
  a) \(\uparrow\) or \(\downarrow\) to VMut.
  b) Press the **Menu Select** button directly below VMut.

The display shows momentary **Voice mute off**, and you hear a short tone, indicating that the feature is disabled or the display shows momentary **Voice mute on**, and you hear a short tone, indicating that the feature is enabled.

**Using the Time-Out Timer**

This feature turns off the transmitter of your radio. You cannot transmit longer than the preset timer setting.

If you attempt to do so, the radio automatically stops your transmission, and you hear a talk-prohibit tone.

The timer is defaulted at 60 seconds, but it can be preprogrammed from 3 to 120 seconds, in 15-second intervals, or it can be disabled entirely for each radio mode, by a qualified radio technician.

**Note**

You hear a brief, low-pitched, warning tone four seconds before the transmission times out.

1. Hold down the **PTT** button longer than the preprogrammed time. You hear a short, low-pitched warning tone, the transmission is cut-off, and the LED goes out until you release the **PTT** button.
2. Release the **PTT** button. The timer resets.
3. To re-transmit, press the **PTT** button. The time-out timer restarts and the LED lights up solid red.

**Using Conventional Squelch Operation Features**

This feature filters out unwanted calls with low signal strength or channels that have a higher than normal background noise.

1. \(\uparrow\) or \(\downarrow\) to Sq1.
2. Press the **Menu Select** button directly below Sq1.
The display shows **Squelch XX**, where XX is the value for the current squelch.

3  Perform one of the following actions:
   • Press the **Menu Select** button directly below “+” to increase the squelch volume.
   • Press the **Menu Select** button directly below “−” to decrease the squelch volume.

4  Press 🏚️ to return to the selected channel.

**Analog Options**

Tone Private Line (PL), Digital Private-Line (DPL), and carrier squelch can be available (preprogrammed) per channel.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>Carrier squelch (C)</td>
<td>You hear all traffic on a channel.</td>
</tr>
<tr>
<td>PL or DPL</td>
<td>The radio responds only to your messages.</td>
</tr>
</tbody>
</table>

**Digital Options**

One or more of the following options may be preprogrammed in your radio. Check with your dealer or system administrator for more information.

<table>
<thead>
<tr>
<th>Option</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>Digital Carrier-Operated Squelch (COS)</td>
<td>You hear any digital traffic.</td>
</tr>
<tr>
<td>Normal Squelch</td>
<td>You hear any digital traffic having the correct network access code.</td>
</tr>
<tr>
<td>Selective Switch</td>
<td>You hear any digital traffic having the correct network access code and correct talkgroup.</td>
</tr>
</tbody>
</table>

**Using the PL Defeat Feature**

This feature allows you to override any coded squelch (DPL or PL) that might be preprogrammed to a channel. The radio also unmutes to any digital activity on a digital channel.

Place the preprogrammed **PL Defeat** switch in the PL Defeat position.
One of the following scenarios occurs:

- You hear any activity on the channel.
- The radio is muted if no activity is present.

**Note**
When this feature is active, the Carrier Squelch status indicator is displayed.

---

**Digital PTT ID Support**

This feature allows you to see the radio ID (number) of the radio from whom you are currently receiving a transmission. This ID, consisting up to a maximum of eight characters, can be viewed by both the receiving radio and the dispatcher.

The ID number of your radio is also automatically sent every time the PTT button is pressed. This is a per-channel feature. For digital voice transmissions, the ID of your radio is sent continuously during the voice message.

**Smart PTT Feature (Conventional Only)**

Smart PTT is a per-personality, programmable feature used in conventional radio systems to keep radio users from talking over other radio conversations.

When smart PTT is enabled in your radio, you cannot transmit on an active channel.

If you try to transmit on an active smart-PTT channel, you hear an alert tone, and the transmission is inhibited. The LED lights up solid yellow to indicate that the channel is busy.

The following table shows the variations of smart PTT:

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Transmit Inhibit on Busy Channel with Carrier</td>
<td>You cannot transmit if any traffic is detected on the channel.</td>
</tr>
<tr>
<td>Transmit Inhibit on Busy Channel with Wrong Squelch Code</td>
<td>You cannot transmit on an active channel with a squelch code or (if secure-equipped) encryption key other than your own. If the PL code is the same as yours, the transmission is not prevented.</td>
</tr>
<tr>
<td>Quick-Key Override</td>
<td>This feature can work in conjunction with either of the two above variations. You can override the transmit-inhibit state</td>
</tr>
</tbody>
</table>
**Mode** | **Description**  
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>by quick-keying the radio. In other words, two PTT button presses within the preprogrammed time limit.</td>
</tr>
</tbody>
</table>

**Transmit Inhibit**

This feature is available for APCO 25 trunking, Type II trunking and Conventional operations for all APX radios.

When Transmit Inhibit feature is enabled, the radio stops all transmission including voice and data. The radio could receive messages but not replying the acknowledgement request of the received message.

User could physically control the transmission of the radio especially during operation in hazardous environments with this feature. An environment is considered hazardous when the power emitted by the radio power amplifier could initiate an explosion or other dangerous reactions.

When the Transmit Inhibit feature is disabled, the radio functions according to its normal operations.

The radio sounds alert tone when user enters or exits this feature and also when PTT is pressed.

![Note]

Acknowledgement of any messages required from the radio is not transmitted if the Transmit Inhibition is enabled.

**Enabling Transmit Inhibition**

Perform one of the following actions:

- Press the Menu Select button below TxIn.
- Turn off the ignition through Ignition Sense Line.

![Note]

If the user has disabled TX Inhibit via the menu and then moves the switch to the position where TX Inhibit is enabled, the new value overwrites the menu value.

The display shows Tx inhibit on. You hear a sequence of short, low-high tones to indicate transmission is inhibited.

Pressing PTT triggers the radio sounds a constant short, low-pitched tone (reject tone).
**Note**
The status of the Transmit Inhibit does not change after the radio powers up.

The softkey TxIn is created to ease the user of inhibition transmission besides relying solely on Ignition Sense Line. Only if the Ignition Sense Line is on, the softkey TxIn works. If the Ignition Sense Line is on, user can always turn on or off the Transmit Inhibition using the softkey TxIn; but when the Ignition Sense Line is off, function of softkey TxIn is suspended, and the Transmit Inhibition function is always off.

If PTT TX Inhibit is enabled, when using multi control head with one active configuration, with the PTT pressed on the active control head, any press on the programmable button of the other control head which meant for that control head to be active control head will cause an unstoppable long low-pitched tone (Talk Prohibit Tone). The display shows Tx inhibit. This behavior can be stopped by pressing PTT button again on the active control head.

**Disabling Transmit Inhibition**

Perform one of the following actions:

- or to TxIn. Press the Menu Select button below TxIn.
- Turn on the ignition through Ignition Sense Line.

**Note**
If the user has disabled TX Inhibit via the softkey and then moves the switch to the position where TX Inhibit is enabled, the new value overwrites the menu value.

The display shows Tx inhibit off. You hear a sequence of short, high-low tone (Transmit Inhibit Off tone) to indicate transmission is back to normal operation.

**General Radio Information**

Your radio contains information on the following:

- Radio Information
- IP Display
- Control Assignments

**Note**
The radio automatically exits the feature, if the feature inactivity timer is enabled, when the radio is left idle and the timer expires. You
hear the Menu Inactive Exit Tone upon feature exit.

**Accessing the Radio Information**

This feature displays the following radio information:

- Host Version
- Secure Version
- CH 1 – 4 Version (depending on the number of channels connected.)
- Siren Version
- Model Number
- ESN
- Flash Code
- Tuning Version
- DSP Version
- KG (Secure Algorithm)
- Serial Number
- Flash Size & Type
- RF Band
- Processor Version
- MCHIB Version
- CHIB Version
- TIB Version
- TRC Version
- VRS Version
- URC Version
- DVRS App Version (only when DVRS is available)
- DVRS DSP Version (only when DVRS is available)
- DVRS CP Version (only when DVRS is available)
- AUX CH Version

**Note**

To return to the Home screen, press at any time.

1. or to Info and press the Menu Select button directly below Info.

2. or to Radio Info and press the Menu Select button directly below Sel. The display shows the Information screen.

3. Perform one of the following actions:
   - or to scroll through the various information.
   - To return to the previous screen, press the Menu Select button directly below Back.
   - To return to the Home screen, press .
**Viewing the IP Information**

This feature displays the device name, IP address, and status of your radio.

*Note*

The device name of your radio is preprogrammed. Check with your dealer or system administrator for more information.

1. Perform one of the following actions:
   - Press the preprogrammed **Info** button.
   - ‹ or ‚ to **Info** and press the **Menu Select** button directly below **Info**.

2. † or ‡ to **IP Info** and press the **Menu Select** button directly below **Sel1**. The display shows the IP Info screen.

3. Perform one of the following actions:
   - † or ‡ to scroll through the various information.
   - Press the **Menu Select** button directly below **Back** to return to the previous screen.
   - Press ‡ to return to the Home screen.

**Viewing the Control Assignments**

This feature displays the programmable radio functions assigned to the controls of your radio for the currently selected channel.

See *Programmable Features* on page 20 for more information on the various programmable features of your radio.

1. Perform one of the following actions:
   - Press the preprogrammed **Info** button.
   - ‹ or ‚ to **Info** and press the **Menu Select** button directly below **Info**.

2. † or ‡ to **Control map** and press the **Menu Select** button directly below **Sel1**. The display shows the Control Map screen.

3. Perform one of the following actions:
   - † or ‡ to scroll through the various information.
   - Press the **Menu Select** button directly below **Back** to return to the previous screen.
   - Press ‡ to return to the Home screen.
External Alarms (Horn and Lights)

All control heads can be equipped for external alarms (horn and lights) that are activated when a Call Alert page, Private Conversation call, or phone call is received.

The radio always powers up with the horn and lights feature enabled.

**Note**
The horn and lights feature must be enabled by a qualified radio technician.

**Using Non-Permanent Horn and Lights**

1. Press the **Menu Select** button directly below H/L momentarily. The last selected alarm(s) are enabled, and the display shows the enabled alarm(s) alternating with the selected mode, until it is turned off.

2. Press the **Menu Select** button directly below H/L momentarily to turn off the alarm(s). The display shows Horn/Lites off.

**Using Permanent Horn and Lights**

If Permanent Horn and Lights is enabled, horn and lights will automatically turn on when the radio powers up.

1. Press the **Menu Select** button directly below H/L once to turn off the alarm(s).

2. Press the **Menu Select** button directly below H/L momentarily to enable the last selected alarm(s). The display briefly shows the enabled alarms, and then reverts back to the selected mode.

**Changing the Selected Alarms**

1. Press the **Menu Select** button directly below H/L until the display shows the required alarm.

2. Perform one of the following actions:
   - Press the **Menu Select** button directly below H +L to turn on both horn and lights.
   - Press the **Menu Select** button directly below L to turn on the lights.
   - Press the **Menu Select** button directly below H to turn on the horn.

One of the following scenarios occurs:
If you choose H+L, the display shows Horn/Lites on.
If you choose Lgts, the display shows Lights on.
If you choose Horn, the display shows Horn on.

An Off entry is shown at the softkey when one of the alarms is active. Selecting Off deactivates the current active alarm.

Receiving a Call While Alarms are Turned On

When you receive a call with the Alarms turned on, you hear the vehicle’s horn sounds for four seconds, and/or the car lights turn on for 60 seconds.

The display shows the type of call received (Call, Page, or Phone) and the selected mode name.

The time interval can be modified by a qualified radio technician.

Turning Off Non-Rearmable External Alarms

1. Perform one of the following actions:

Turning Off Rearmable External Alarms

2. Press the Menu Select button directly below H/L momentarily to rearm the horn and lights feature.

Perform one of the following actions:

• Press the Menu Select button directly below Call, Page or Phone to turn off the external alarm(s) and access that feature.
• Press the PTT button or any control-head button to turn off the external alarm(s).

The Volume Knob and the Dimmer button have no effect on the state of the external alarm(s).
exit the entry, the external alarm(s) will automatically turn on.

• Press the **Menu Select** button directly below **H/L** to turn off the external alarm(s) and exit the Horn and Lights feature. Press the **Menu Select** button directly below **H/L** momentarily to rearm the horn and lights feature.

The **Volume Knob** and the **Dimmer** button have no effect on the state of the external alarm(s).
Helpful Tips

Radio Care

The following are suggestions to assist you in troubleshooting possible operating problems.

⚠️ Caution
The cables that connect to the rear of the radio could have live voltage on some of their pins. Do not remove or reconnect these cables. Only a qualified radio technician should perform this task. Service performed by unauthorized personnel may cause the radio to transmit an emergency alarm even if the unit is turned off.

If your radio is locked up or the display shows FAIL 01/09, turn the radio off and then back on. If this does not correct the condition, take the radio to a qualified radio technician for service.

If radio operation is intermittent, check with other persons using the system for similar problems before taking the radio in for service. Similar problems indicate a system malfunction rather than a radio failure.

If symptoms persist or, if your unit exhibits other problems, contact a qualified radio technician.
Accessories

The accessory link below is for APX radios. Not all accessories are FCC certified to operate with all APX models and/or bandsplits. Please refer to the specific APX radio price pages for a list of FCC certified accessories or contact your sales representative for accessory compatibility.

Maritime Radio Use in the VHF Frequency Range

Special Channel Assignments

Emergency Channel

If you are in imminent and grave danger at sea and require emergency assistance, use VHF Channel 16 to send a distress call to nearby vessels and the United States Coast Guard. Transmit the following information, in this order:

1. “MAYDAY, MAYDAY, MAYDAY.”
2. “THIS IS _________________, CALL SIGN __________.” State the name of the vessel in distress 3 times, followed by the call sign or other identification of the vessel, stated 3 times.
3. Repeat “MAYDAY” and the name of the vessel.
4. “WE ARE LOCATED AT _________________.” State the position of the vessel in distress, using any information that will help responders to locate you, e.g.:
   - latitude and longitude
   - bearing (state whether you are using true or magnetic north)
   - distance to a well-known landmark
   - vessel course, speed or destination
5. State the nature of the distress.
6. Specify what kind of assistance you need.
7. State the number of persons on board and the number needing medical attention, if any.
8. Mention any other information that would be helpful to responders, such as type of vessel, vessel length and/or tonnage, hull color, etc.
9. “OVER.”
10. Wait for a response.
11. If you do not receive an immediate response, remain by the radio and repeat the transmission at intervals until you receive a response. Be prepared to follow any instructions given to you.

Non-Commercial Call Channel

For non-commercial transmissions, such as fishing reports, rendezvous arrangements, repair scheduling, or berthing information, use VHF Channel 9.

Operating Frequency Requirements

A radio designated for shipboard use must comply with Federal Communications Commission Rule Part 80 as follows:
• on ships subject to Part II of Title III of the Communications Act, the radio must be capable of operating on the 156.800 MHz frequency.
• on ships subject to the Safety Convention, the radio must be capable of operating:
  • in the simplex mode on the ship station transmitting frequencies specified in the 156.025 – 157.425 MHz frequency band, and
  • in the semiduplex mode on the two frequency channels specified in the table below.

Note
Simplex channels 3, 21, 23, 61, 64, 81, 82, and 83 cannot be lawfully used by the general public in US waters.

Additional information about operating requirements in the Maritime Services can be obtained from the full text of FCC Rule Part 80 and from the US Coast Guard.

Note

* Simplex channels 3, 21, 23, 61, 64, 81, 82, and 83 cannot be **lawfully used** by the general public in US waters.

** Low power (1 W) only.

*** Guard band.

Note

A – in the Receive column indicates that the channel is transmit only.

Declaration of Compliance for the Use of Distress and Safety Frequencies

The radio equipment does not employ a modulation other than the internationally adopted modulation for maritime use when it operates on the distress and safety frequencies specified in RSS-182 Section 7.3.

<td></td>
<td></td>
</tr>
</tbody>
</table>
**Conventional**
- Typically refers to radio-to-radio communications, sometimes through a repeater (see Trunking).

**Conventional Scan List**
- A scan list that includes only conventional channels.

**CP**
- Codeplug

**Cursor**
- A visual tracking marker (a blinking line) that indicates a location on the display.

**Deadlock**
- Displayed by the radio after three failed attempts to unlock the radio. The radio must be powered off and on prior to another attempt.

**Digital Private Line (DPL)**
- A type of coded squelch using data bursts. Similar to PL except a digital code is used instead of a tone.

**Digital Signal**
- An RF signal that has a pulsed, or discrete, nature, rather than a continuous nature.

**Dispatcher**
- An individual who has radio system management duties.

**DSP**
- Digital Signal Processing

**Dynamic Regrouping**
- A feature that allows the dispatcher to temporarily reassign selected radios to a single special channel so they can communicate with each other.

**DVRS**
- Digital Vehicular Repeater System

**ESN**
- Electrical Serial Number

**Failsoft**
- A feature that allows communications to take place even though the central controller has failed. Each trunked repeater in the system transmits a data word informing every radio that the system has gone into failsoft.

<td>A conventional radio feature, where you talk through a receive/transmit facility that re-transmits received signals, in order to improve communications range and coverage.</td>
</tr>
<tr>
<td><strong>Selective Call</strong></td>
<td>A feature that allows you to call a selected individual, intended to provide privacy and to eliminate the annoyance of having to listen to conversations of no interest to you.</td>
</tr>
<tr>
<td><strong>Selective Switch</strong></td>
<td>Any digital P25 traffic having the correct Network Access Code and the correct talkgroup.</td>
</tr>
</tbody>
</table>
**Squelch**
Special electronic circuitry, added to the receiver of a radio, that reduces, or cuts off, unwanted signals before they are heard in the speaker.

**Standby**
An operating condition whereby the radio’s speaker is muted but still continues to receive data.

**Status Calls**
Pre-defined text messages that allow the user to send a conditional message without talking.

**Tactical/ Non-Revert**
The user talks on the channel that was selected before the radio entered the emergency state.

**Talkaround**
Bypass a repeater and talk directly to another unit for easy local unit-to-unit communications.

**Talkgroup**
An organization or group of radio users who communicate with each other using the same communication path.

**TMS**
Text Messaging Service

**Trunking**
The automatic sharing of communications paths between a large number of users (see Conventional).

**Trunking Priority Monitor Scan List**
A scan list that includes talkgroups that are all from the same trunking system.

**USK**
Unique Shadow Key.

**UTC**
Coordinated Universal Time.
The international time standard (formerly Greenwich Mean Time, or GMT). Zero hours UTC is midnight in Greenwich, England, which is located at 0 degrees longitude. Everything east of Greenwich (up to 180 degrees) is later in time; everything west is earlier.
There are 42 time authorities around the world that are constantly synchronizing with...
each other. Abbreviated as UTC (English backronym = Universal Time, Coordinated), it is also known as Zulu (Z) Time.

**VRS**  
Vehicular Repeater System

**Zone**  
A grouping of channels.
Limited Warranty

MOTOROLA COMMUNICATION PRODUCTS

I. WHAT THIS WARRANTY COVERS AND FOR HOW LONG:

MOTOROLA SOLUTIONS, INC. ("MOTOROLA") warrants the MOTOROLA manufactured Communication Products listed below ("Product") against defects in material and workmanship under normal use and service for a period of time from the date of purchase as scheduled below:

<table>
<thead>
<tr>
<th>Product</th>
<th>Warranty Period</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASTRO APX Mobile Radios</td>
<td>One (1) Year</td>
</tr>
<tr>
<td>Product Accessories</td>
<td>One (1) Year</td>
</tr>
</tbody>
</table>

MOTOROLA, at its option, will at no charge either repair the Product (with new or reconditioned parts), replace it (with a new or reconditioned Product), or refund the purchase price of the Product during the warranty period provided it is returned in accordance with the terms of this warranty. Replaced parts or boards are warranted for the balance of the original applicable warranty period. All replaced parts of Product shall become the property of MOTOROLA.

This express limited warranty is extended by MOTOROLA to the original end user purchaser only and is not assignable or transferable to any other party. This is the complete warranty for the Product manufactured by MOTOROLA. MOTOROLA assumes no obligations or liability for additions or modifications to this warranty unless made in writing and signed by an officer of MOTOROLA.

Unless made in a separate agreement between MOTOROLA and the original end user purchaser, MOTOROLA does not warrant the installation, maintenance or service of the Product.

MOTOROLA cannot be responsible in any way for any ancillary equipment not furnished by MOTOROLA which is attached to or used in connection with the Product, or for operation of the Product with any ancillary equipment, and all such equipment is expressly excluded from this warranty. Because each system which may use the Product is unique, MOTOROLA disclaims liability for range, coverage, or operation of the system as a whole under this warranty.
II. GENERAL PROVISIONS:

This warranty sets forth the full extent of MOTOROLA’s responsibilities regarding the Product. Repair, replacement or refund of the purchase price, at MOTOROLA’s option, is the exclusive remedy. THIS WARRANTY IS GIVEN IN LIEU OF ALL OTHER EXPRESS WARRANTIES. IMPLIED WARRANTIES, INCLUDING WITHOUT LIMITATION, IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED TO THE DURATION OF THIS LIMITED WARRANTY. IN NO EVENT SHALL MOTOROLA BE LIABLE FOR DAMAGES IN EXCESS OF THE PURCHASE PRICE OF THE PRODUCT, FOR ANY LOSS OF USE, LOSS OF TIME, INCONVENIENCE, COMMERCIAL LOSS, LOST PROFITS OR SAVINGS OR OTHER INCIDENTAL, SPECIAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE SUCH PRODUCT, TO THE FULL EXTENT SUCH MAY BE DISCLAIMED BY LAW.

III. STATE LAW RIGHTS:

SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES OR LIMITATION ON HOW LONG AN IMPLIED WARRANTY LASTS, SO THE ABOVE LIMITATION OR EXCLUSIONS MAY NOT APPLY.

This warranty gives specific legal rights, and there may be other rights which may vary from state to state.

IV. HOW TO GET WARRANTY SERVICE:

You must provide proof of purchase (bearing the date of purchase and Product item serial number) in order to receive warranty service and, also, deliver or send the Product item, transportation and insurance prepaid, to an authorized warranty service location. Warranty service will be provided by MOTOROLA through one of its authorized warranty service locations. If you first contact the company which sold you the Product (e.g., dealer or communication service provider), it can facilitate your obtaining warranty service. You can also call MOTOROLA at 1-800-927-2744 US/Canada.
V. WHAT THIS WARRANTY DOES NOT COVER:

1. Defects or damage resulting from use of the Product in other than its normal and customary manner.
2. Defects or damage from misuse, accident, water, or neglect.
3. Defects or damage from improper testing, operation, maintenance, installation, alteration, modification, or adjustment.
4. Breakage or damage to antennas unless caused directly by defects in material workmanship.
5. A Product subjected to unauthorized Product modifications, disassembles or repairs (including, without limitation, the addition to the Product of non-MOTOROLA supplied equipment) which adversely affect performance of the Product or interfere with MOTOROLA’s normal warranty inspection and testing of the Product to verify any warranty claim.
6. Product which has had the serial number removed or made illegible.
7. Rechargeable batteries if:
   - any of the seals on the battery enclosure of cells are broken or show evidence of tampering.
   - the damage or defect is caused by charging or using the battery in equipment or service other than the Product for which it is specified.
8. Freight costs to the repair depot.
9. A Product which, due to illegal or unauthorized alteration of the software/firmware in the Product, does not function in accordance with MOTOROLA’s published specifications or the FCC certification labeling in effect for the Product at the time the Product was initially distributed from MOTOROLA.
10. Scratches or other cosmetic damage to Product surfaces that does not affect the operation of the Product.
11. Normal and customary wear and tear.

VI. PATENT AND SOFTWARE PROVISIONS:

MOTOROLA will defend, at its own expense, any suit brought against the end user purchaser to the extent that it is based on a claim that the Product or parts infringe a United States patent, and MOTOROLA will pay those costs and damages finally awarded against
the end user purchaser in any such suit which are attributable to any such claim, but such defense and payments are conditioned on the following:

1. that MOTOROLA will be notified promptly in writing by such purchaser of any notice of such claim,
2. that MOTOROLA will have sole control of the defense of such suit and all negotiations for its settlement or compromise, and
3. should the Product or parts become, or in MOTOROLA’s opinion be likely to become, the subject of a claim of infringement of a United States patent, that such purchaser will permit MOTOROLA, at its option and expense, either to procure for such purchaser the right to continue using the Product or parts or to replace or modify the same so that it becomes non-infringing or to grant such purchaser a credit for the Product or parts as depreciated and accept its return. The depreciation will be an equal amount per year over the lifetime of the Product or parts as established by MOTOROLA.

MOTOROLA will have no liability with respect to any claim of patent infringement which is based upon the combination of the Product or parts furnished hereunder with software, apparatus or devices not furnished by MOTOROLA, nor will MOTOROLA have any liability for the use of ancillary equipment or software not furnished by MOTOROLA which is attached to or used in connection with the Product. The foregoing states the entire liability of MOTOROLA with respect to infringement of patents by the Product or any parts thereof.

Laws in the United States and other countries preserve for MOTOROLA certain exclusive rights for copyrighted MOTOROLA software such as the exclusive rights to reproduce in copies and distribute copies of such MOTOROLA software. MOTOROLA software may be used in only the Product in which the software was originally embodied and such software in such Product may not be replaced, copied, distributed, modified in any way, or used to produce any derivative thereof. No other use including, without limitation, alteration, modification, reproduction, distribution, or reverse engineering of such MOTOROLA software or exercise of rights in such MOTOROLA software is permitted. No license is granted by implication, estoppel or otherwise under MOTOROLA patent rights or copyrights.
VII. GOVERNING LAW:

This Warranty is governed by the laws of the State of Illinois, U.S.A.

VIII. For Australia Only:

This warranty is given by Motorola Solutions Australia Pty Limited (ABN 16 004 742 312) of Tally Ho Business Park, 10 Wesley Court. Burwood East, Victoria.

Our goods come with guarantees that cannot be excluded under the Australia Consumer Law. You are entitled to a replacement or refund for a major failure and compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

Motorola Solutions Australia’s limited warranty above is in addition to any rights and remedies you may have under the Australian Consumer Law. If you have any queries, please call Motorola Solutions Australia at 1800 457 439. You may also visit our website: http://www.motorolasolutions.com/XA-EN/Pages/Contact_Us for the most updated warranty terms.

SERVICE

Proper repair and maintenance procedures will assure efficient operation and long life for this product. A Motorola maintenance agreement will provide expert service to keep this and all other communication equipment in perfect operating condition. A nationwide service organization is provided by Motorola to support maintenance services. Through its maintenance and installation program, Motorola makes available the finest service to those desiring reliable, continuous communications on a contract basis. For a contract service agreement, please contact your nearest Motorola service or sales representative, or an authorized Motorola dealer.

Express Service Plus (ESP) is an optional extended service coverage plan, which provides for the repair of this product for a period of three years from the date of shipment from the factory, or the date of delivery if purchased from an authorized Motorola two-way radio dealer. For more information about ESP, contact the Motorola Radio Support Center, 2204 Galvin Drive, Elgin, IL 60123, 1-800-227-6772.
