

VIDEO-AS-A-SERVICE

COST-EFFECTIVE BODY-WORN CAMERAS FOR YOUR BUSINESS

Body-worn video-as-a-service ensures that your organization has the equipment needed to successfully and efficiently deploy body-worn cameras, with minimal upfront capital cost. Capture evidence, protect staff, reduce false claims and improve workplace safety with this simple, bundled option.

Whether you manage security officers who are facing threats daily, or retail staff interacting with the public, body-worn cameras provide a level of protection, awareness and indisputable evidence to keep your business and your staff safe.

We understand the threat of workplace violence is increasing, and with that threat comes the need for fast action and deployment of solutions. However, with known barriers around raising funds, IT limitations and uncertainty around data storage requirements, delivering these solutions can be fraught with restrictions and red tape.

Our body-worn video-as-a-service option provides you with the ability to act now and reap the benefits of a fully-deployed body-worn camera solution, with a reduced upfront capital investment. Including access to our VideoManager Software, your choice of body-worn camera, supporting hardware, cloud storage and full access and ownership of data, this offering provides everything you need for a full rollout. And, as is standard when you purchase a VideoManager license or cloud instance, there are no user license fees. This allows you to provide access to VideoManager for as many staff as you need, regardless of the number of cameras in circulation.

NO SOFTWARE TO MANAGE

This cloud-based solution leaves you with no software to install and update, no licenses to manage and no infrastructure to configure. It's simple and efficient.

MANAGEABLE CAPITAL INVESTMENT

With manageable upfront investment, you can deploy your body-worn camera solution now and pay in manageable installments in the future.

FULL WARRANTY

Maintain efficiency and reliability, with full hardware warranty and support.

TECHNOLOGY REFRESH

Stay current with the latest technology thanks to a refresh of your body-worn cameras after 3 years.

BUDGET PREDICTABILITY

Stay on budget, with predictable payments that include your camera system, software, support, and video storage.
