

In the high-pressure environment of a fireground, where every second counts, the need for accurate, real-time data is critical, as missing or incorrect information can lead to less efficient responses and regulatory non-compliance. Guardian Mobile provides an innovative, paperless solution that empowers FRSs to move away from traditional, time-consuming methods of data collection. This powerful tool allows your team to create and distribute forms in minutes, streamlining operations and ensuring your frontline can manage incidents more effectively, make informed decisions, and enhance safety.

The forms designer allows for the quick and easy creation of intuitive forms with a drag-and-drop interface. You can create an unlimited number of structured forms, complete with features like an automatic risk calculator.

You can automatically add incident information, such as the incident number and address, from your CAD system directly to forms. These completed forms can then be shared with other members of your FRS in real-time over 4G, ESN or Airwave networks and can be viewed for post-incident debriefs.
