

Guardian Mobile Station Notifier

Effectively empower your FRS for frontline readiness

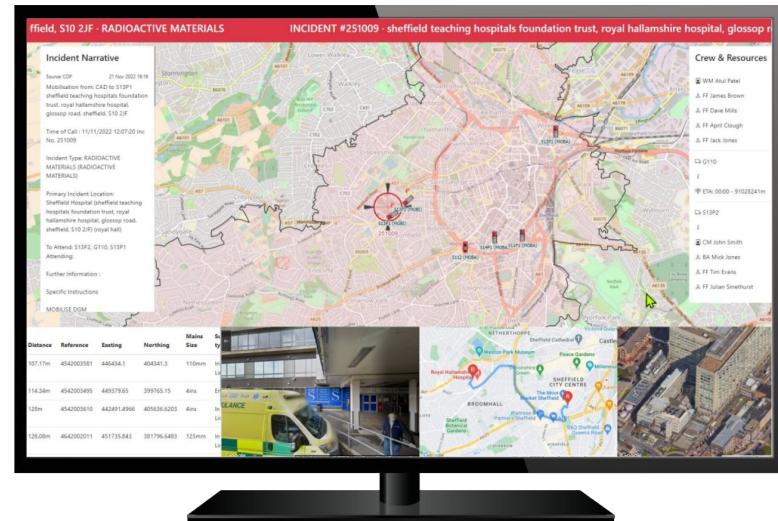

When the alarm sounds at your station, every moment is valuable, and having immediate yet holistic information is the key to a safer and more effective response. Guardian Mobile transforms the way your crew receive incident alerts by providing a real-time visual of the situation they have been deployed to. This powerful tool provides a clear snapshot of vital information, including an instant view of the route, distance, weather, and ETA. By delivering these essential details while crews prepare to board the appliance, Guardian Mobile helps improve firefighter safety and enables smarter planning from the very start.

Enhanced awareness for smarter planning

See a live overview of the incident that crews are being mobilized to, for a clear summary of critical details including incident type, local points of interest (POIs), a live list of mobilised resources and their crewing information, and a bird's-eye view of the incident location to help crews visualize nearby risks and hydrants on the map.

Share updates securely for safer operations

Deployed via a simple web browser, your teams can access the critical, live feed through almost every device – from station smart screens to in-field tablets or smartphones. Access is tightly controlled by Active Directory, and proprietary information is automatically redacted post-mobilisation, ensuring secure, compliant communication from any location.
