

PROTECT YOUR MINeworkERS SO YOU STAY OPERATIONAL

Motorola Solutions offers a suite of smart technologies to help you comply with the rigorous new mine site safety requirements – from monitoring distancing and occupancy, to eliminating physical touchpoints on equipment or responding effectively to outbreaks.

1. PREVENT

Monitor mineworkers for compliance with health and behavioural requirements.

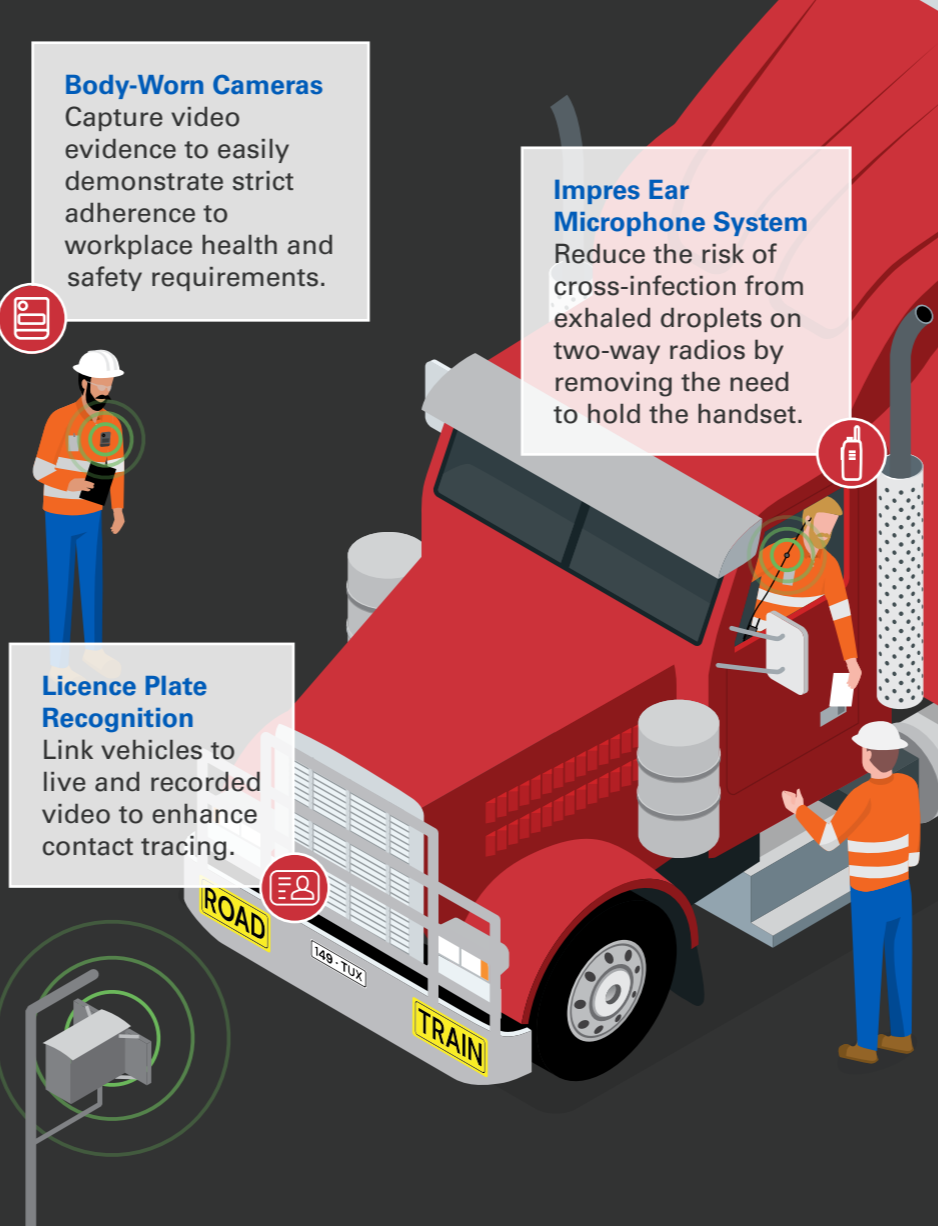

Social Distancing
Measure how far apart people are with Avigilon Control Centre, which shows if you need to limit numbers or change movement patterns.

Occupancy Counting
Know exactly how many people are in a space even if there are multiple entries and exits, with AI-powered analytics on video security cameras.

Face Mask Detection
Check if workers are wearing masks when required. Access Control Manager alerts you on policy adherence.

2. PROTECT

Contact trace symptomatic individuals and reduce risk of contact.

Body-Worn Cameras
Capture video evidence to easily demonstrate strict adherence to workplace health and safety requirements.

Impres Ear Microphone System
Reduce the risk of cross-infection from exhaled droplets on two-way radios by removing the need to hold the handset.

Licence Plate Recognition
Link vehicles to live and recorded video to enhance contact tracing.

3. RESPOND

Track and manage outbreaks and individual care.

AI-powered Video Search
Sort through hours of video to locate a specific person or vehicle with a sophisticated deep learning search engine.

Contact Tracing
Track where an infected person has been, which doors they used and who they came in contact with, using Avigilon's Identity Search.

Monitoring Apps
Trigger testing and tracing when first responders report worker symptoms in the Field Registration App, and communicate securely with those in quarantine through the Self Quarantine App.
