CONNECTED AND PROTECTED:
SUPPORTING SERVICE PERSONNEL IN THE MOMENTS THAT MATTER
FROM COMPLEX DEPLOYMENTS IN A CHALLENGING VANGUARD AND EXPEDITIONARY BATTLESPACE TO PROTECTING BASE AREAS FROM CONVENTIONAL THREAT ACTORS, MILITARY FORCES HAVE ALWAYS FACED AN UNPRECEDENTED SPECTRUM OF HOSTILE SITUATIONS.

TODAY, DIGITAL TRANSFORMATION AND THE MIGRATION TO NETWORK-ENABLED OPERATIONS ENGENDER NEW CHALLENGES:
cyber attacks on command and strategic communication assets, breaches of classified information, and risks to national security. Often reliant on outdated technologies, defence organisations are growing more vulnerable to these evolving threats.

Back at base, there is a focus on providing a safe and secure space to live, and deliver immersive training to enhance the personal improvement of service personnel. Their efforts can be compromised by a lack of appropriate technology: they require systems that offer protection and deliver insights day and night to heighten situational awareness, helping personnel to triage, assess and monitor potential threats. Immersive training can be achieved by providing dynamic after-action reviews, and assessing the performance of an exercise in slow-motion, in the appropriate learning environment.

Our innovative solutions deliver technology at the forefront of expeditionary deployments, and in pursuit of interoperable technologies, we’ve driven multiple innovations across P25, TETRA and DMR Land Mobile Radio (LMR), 4G and 5G LTE, tactical HF and VHF radio, Wi-Fi and tactical deployable communications. We leverage AI-enabled advancements in video solutions to establish interoperability between disparate systems and improve communication. This helps to solve security and tactical operation challenges, delivering comprehensive situational awareness and providing enhanced levels of protection - resulting in better outcomes across the whole force.

This diverse portfolio of solutions meets various high-level certifications including JITC, NIAP, CSfC, and FIPS.
UNIFYING VOICE, VIDEO, DATA AND ANALYTICS, OUR INTEGRATED MISSION-CRITICAL TECHNOLOGY ECOSYSTEM IS THE FIRST OF ITS KIND, PROVIDING A LIFELINE THAT SERVICE PERSONNEL DEPEND ON TO SUCCESSFULLY INFORM, LEAD AND CONDUCT THEIR MISSION.
IN TIMES OF CONFLICT, OUR TECHNOLOGY IS DESIGNED TO HEIGHTEN YOUR INTELLIGENCE GATHERING CAPABILITIES - WHEREVER DUTY TAKES YOU.

WE CAN HELP YOUR DEFENCE TEAMS STAY CONNECTED AND PROTECTED, AND SECURE YOUR MISSIONS BY ENABLING YOU TO:

INFORM YOUR MISSION
GAIN VALUABLE INTELLIGENCE TO SUPPORT YOUR OPERATIONS AND YOUR COMMUNITY
Detect, identify, classify and track people and items of interest with our advanced sensor systems, designed for integration across your community. Use our broad range of tools to map your personnel and resources, ensuring the right intelligence reaches the right people.

LEAD YOUR MISSION
VISUALISE AND Respond TO INTELLIGENCE WITH MAXIMUM SITUATIONAL AWARENESS
Our suite of Command Centre solutions help you to map your intelligence for a thorough visual picture, and can be leveraged as standalone solutions or alongside existing applications.

CONDUCT YOUR MISSION
SHARE INTELLIGENCE ACROSS ANY DEVICE, NETWORK OR APPLICATION
Leverage a variety of networks with our portfolio of secure communications systems and devices - including P25, TETRA and DMR Land Mobile Radio (LMR), 4G and 5G LTE, tactical HF and VHF radio, Wi-Fi and tactical deployable communications. In the cloud or on-premise, our solutions seamlessly integrate with your existing situational awareness applications.

PROTECT YOUR MISSION
We incorporate video security and access control, body-worn and in-vehicle cameras, and ANPR and analytics to provide heightened levels of protection for each stage of your mission.

INTELLIGENCE FOR EVERY STAGE OF YOUR MISSION
SUPPORTING THE SITUATIONS YOU ENCOUNTER

CRUCIAL CONNECTIONS
We enable mission-critical connections for service personnel, providing both tactical and deployable communications out in the field - across training estates, when out of range of the core system and back at base. Our technology combines communications, video and analytics to drive efficient event management and help support immersive training.

Personnel can review drills and practises, and contribute to their execution via a live-feed, supporting improved training performance and maintaining a high standard of health and safety.

UNPARALLELED PROTECTION
Our ecosystem embraces the ‘whole force’ approach, as determined by the Centre for Defence Studies (CDS) in the Department of War Studies, King’s College London which: “... was developed to ensure that Defence was able to harness an integrated mix of Regular, Reserve, civilian and contractor personnel to deliver military effects in a resilient, efficient and cost-effective way.” We have the relevant technology to deliver a sustainable long-term investment which will benefit everyone, for any given task.

Combining video security cameras, access control, infrastructure management and application software with AI-enabled analytics, personnel can transition from field to base securely.

Efficiently manage fleet entry into base by detecting vehicle number plates with our fixed and mobile Automatic Number Plate Recognition (ANPR) cameras, and blue force tracking.

Our access control solutions manage the entire site security - including granting base access. The data this generates provides powerful insights which allow you to make smarter decisions and drive operational efficiencies.

Using our advanced range of video surveillance cameras - including thermal, multi-sensor and high resolution - monitor critical areas of the base including command and control, and accommodation. Establish perimeters to protect service personnel and respond quickly to suspicious activity and potential threats.

Rapidly triage incidents and accurately classify them using advanced video analytics, including embedded best-in-class algorithms across our technology ecosystem.

Improve the safety, security and accountability of your service personnel with body-worn cameras (BWC) for base security.
USING INTENTIONAL DESIGN TO ENHANCE THE LIVED EXPERIENCE OF SERVICE PERSONNEL

THROUGH INNOVATION, COLLABORATION AND SUSTAINABILITY, OUR SOLUTIONS BREAK DOWN COMMUNICATION AND OPERATIONAL TECHNOLOGY BARRIERS, IMPROVING THE ENVIRONMENT FOR THOSE WHO SERVE.

WE INNOVATE
Market-leaders in defence technology, we prioritise contributing to the advancement and development of future-proof solutions to support our forces. Across borders and between forces, the interoperability of our systems, software and devices is imperative, ensuring consistent compatibility and a long-term investment.

WE COLLABORATE
At Motorola Solutions we design and build defence technologies in partnership with those who serve. Leveraging the experiences of defence teams, we develop solutions to improve operations and transform safety.

WE CHAMPION SUSTAINABILITY
We understand the impact of the supply chain and meet industry best practice at each stage, adhering to human rights, supplier diversity and fair labour practices; we are committed to working both sustainably and fairly.

By 2050, we aim to achieve net zero emissions. To reach this target we have adopted carbon reduction targets, and completed or implemented several measures and projects since the 2020 baseline, as detailed in the Motorola Solutions UK Limited Carbon Reduction Plan.

Our climate strategy recognises our responsibility to minimise our carbon emissions, and adheres to science-based methodologies. These include setting the goal to reduce our scope 1 and 2 emissions by 95% by 2031, making greener purchasing decisions and enhancing energy efficiency.

ENHANCING LIVED EXPERIENCES
Each of these components reinforces our ability to build technology that supports operations while enhancing communications during peacetime and in times of conflict. From intelligent security systems that mobilise service personnel across the base - allowing them to access gyms and media rooms freely through smart access control systems, to leveraging thermal cameras and AI to detect unauthorised visitors, these advancements create a better, safer working environment.
