CommandCentral AXS Radio Dispatch Console

Modernized experience, instantly familiar

Say hello to the future of dispatch

In today's dispatching world, there's more information, resources and tools competing for your attention than ever before. Cut through the noise and be ready for any crisis, now and into the future, with CommandCentral AXS, the modern, intuitive dispatch solution purpose-built for ASTRO P25 radio systems. It simplifies complex information, offering familiar workflows for migrating agencies and a future-ready experience for new users. It's the purpose-built ASTRO radio dispatch console—integrated, proven, and modernized.
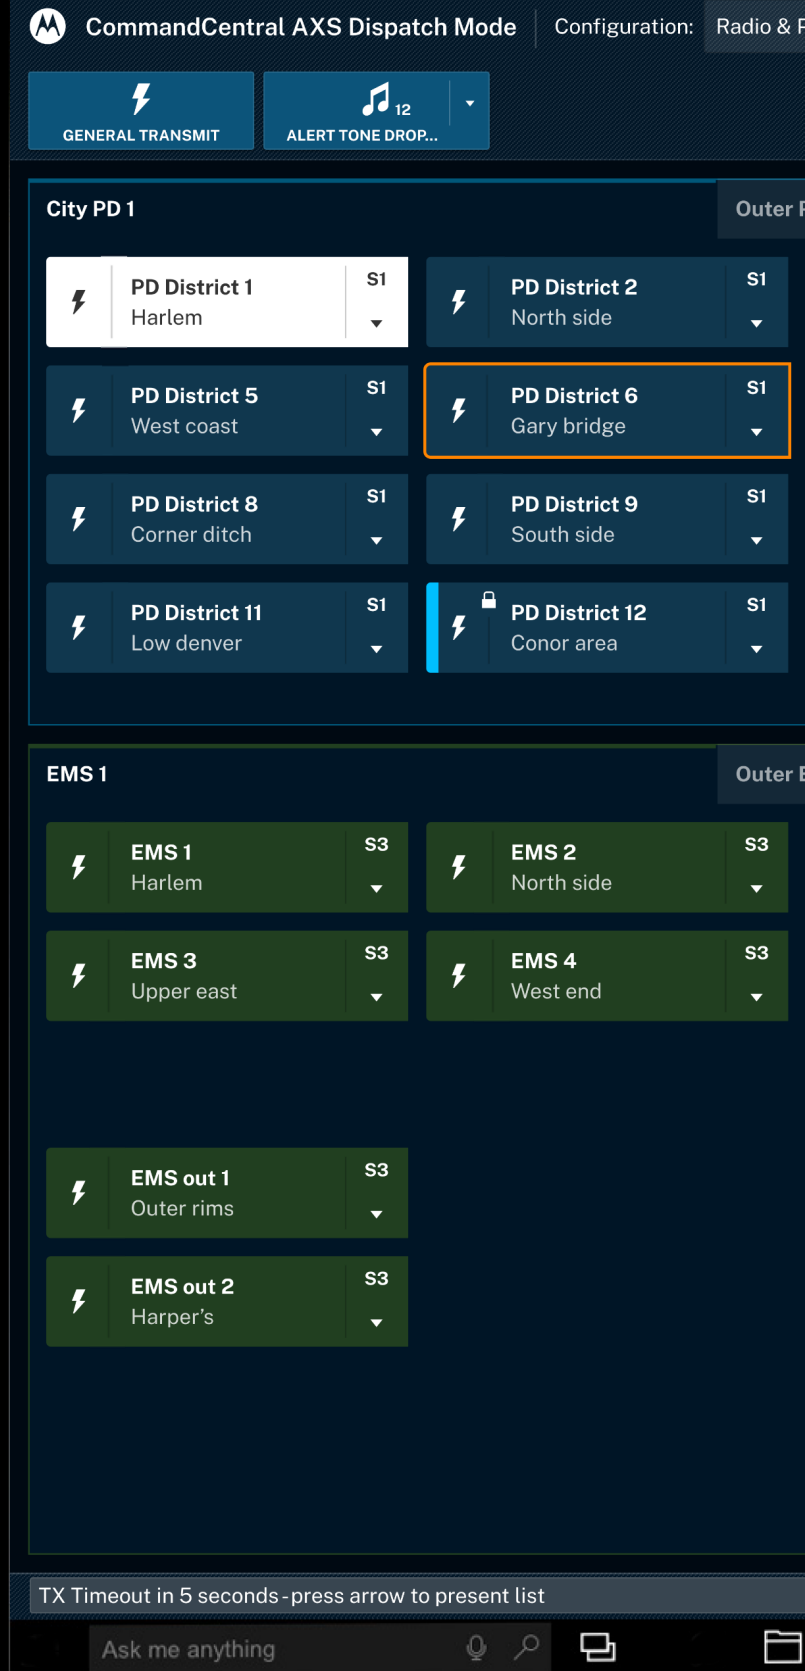

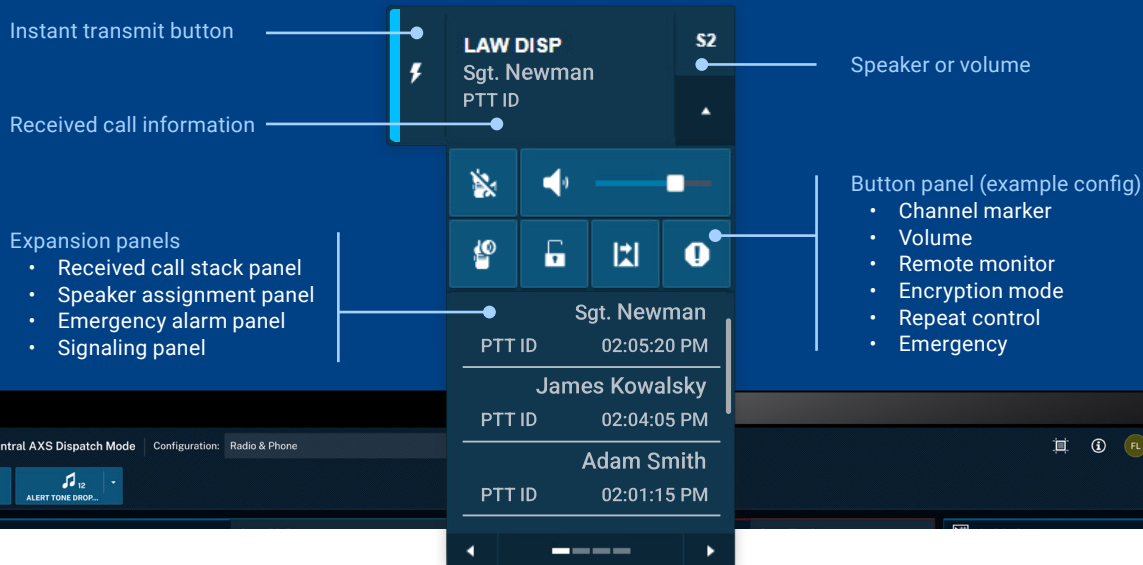

Next generation dispatch experience

Designed to work the way you do

As a dispatcher, you face crisis situations every day. You need more than a new app or device. You need new thinking – a next generation platform that works for you, not the other way around.

CommandCentral AXS brings a thoughtfully improved interface built on the familiar MCC 7500 workflows used for decades in radio dispatch deployments. Based on input from dispatchers worldwide, the enhancements are purposely designed to streamline navigation, surface critical information faster and reduce common errors. The result is an optimized upgrade that feels familiar, but improves efficiency where dispatchers need it most. Touch, type, or click — AXS adapts to you.

Access important features directly within the resource

Improve accuracy and efficiency

CommandCentral AXS is all about having the important elements right where they need to be based on their priority. We put important tasks and frequently used functions directly within the resource. That way you can keep your eyes trained on what matters—even in pressure-packed moments. Whether struggling through complicated menus or accidentally pressing the wrong button, CommandCentral AXS helps minimize mistakes and confusion. Now, stay focused on the task at hand, supporting your team's need for accuracy and efficiency.

Highly flexible and configurable

Create the dispatch experience your agency needs

Interact with the console, however you see fit—touch, type or click. Have a console that represents your agency's identity and procedures. With this level of configurability, dispatchers can focus on what matters. Extend that flexibility and deploy it however you want. And rest assured that it will grow with you when the time comes.

Configurable colors

Create a unique visual experience with the colors of your choice or choose a predefined color theme. Color elements include resources, folder groups, buttons and more.

Configurable alerts and tones

Choose from a wide array of alerts and tones from our library.

Configurable folder and tab organization

Take control of the layout with the ability to quickly and easily organize it how you see fit. With the availability of dynamic and fixed folders, you can always have important resources front and center.

Configurable iconography

Choose from a wide array of icons from our library.

### Configurable for individual roles, teams and agencies

Configure the console's look and feel for an individual user, or create a agencywide look and feel.

Touch, type or click

Stay connected in the way that suits you best with a resource-centric design and the flexibility to interact with the console by touch, type or click.

Support panes

Think fast, work faster

Access built-in services to help you work faster while providing greater support to users in the field. Choose from a variety of support pane services, such as patching, multi-select and an activity log.

Flexible deployment configurations

One console, multiple deployment options

CommandCentral AXS leverages an elegant, intuitive GUI based on more than 5,000 hours of research with customers like you. Virtually unlimited screen layout options ensure you can configure AXS with the precise functionality to fit your organization's needs and workflows.

Smooth migration. Modern experience. Same trusted ASTRO foundation.

Purpose-built for ASTRO radio systems

CommandCentral AXS brings a refreshed, modern look and enhanced security—yet at its core, it's still an ASTRO radio dispatch console with all the benefits that brings. For MCC 7500 and MCC 7500E users, you get a smooth, straightforward migration to CommandCentral AXS at a pace you are comfortable with.

Simplify operations

Use the same network management tools for both the ASTRO radio system and CommandCentral AXS radio dispatch consoles. Get the same support from one point of contact for both the radio system and consoles.

Reduce RF congestion

Grouping functions, such as patch and multiselect, initiated from CommandCentral AXS use only one RF channel resource on the ASTRO radio network.

Improve field safety

Give dispatches the ability to prioritize talkgroups during tactical situations and remotely listen to the audio in the vicinity of a radio.

Maintain local dispatch control

Dispatch sites using CommandCentral AXS can stay connected to their local radio sites even when they lose connectivity to the ASTRO zone core.

Part of an integrated public safety command center

A consistent interface— train less, respond faster

CommandCentral AXS uses a common UI, consistent with other CommandCentral applications across the Motorola Solutions ecosystem. Dispatchers can move fluidly between tools without wasting time relearning controls, reducing both onboarding and retraining costs. Familiar layouts and streamlined workflows minimize errors in critical moments, while building operator confidence under pressure. Whether managing radio resources, coordinating mutual aid, or leveraging other CommandCentral solutions, a unified interface ensures your team adapts quickly and stays mission-focused.

Mission-critical accessories

Make the most of your console with dispatch accessories you can count on. Put your trust in dispatch audio accessories that have been designed and tested for mission-critical performance and reliability.

To learn more, take a look at our dispatch accessories brochure.

Customize your services

Tailor any additional services and expert support based on your agency's unique needs.

Choose from a wide range of options, including on-site tech support, scheduled preventative maintenance, equipment repair and return, and cybersecurity Managed Detection and Response (MDR) services, which provide 24/7 protection against cyber threats like ransomware.
