IMAGING

CAPTURE, LINK AND SHARE HIGH-QUALITY IMAGE FILES

CONVENIENT FILE CAPTURE

Quickly organize images and other files with CommandCentral Jail's File Capture feature. The Imaging module allows your personnel to easily add files to a record by dragging and dropping them into the correct field from a hard drive, scanner directory or network location. Easily move multiple files together or capture files one by one. An accompanying description can also be attached to each file, allowing others to easily identify its contents.

LIVE MUG SHOT CAPTURE

CommandCentral Jail's Imaging module helps your personnel control camera functions remotely through a live video feed, which includes eye-level and face-width guidelines to assist in taking uniform mugshots. Images can be automatically cropped and stored in a format and size compatible with standards issued by the National Institute of Standards and Technology (NIST).

LINEUPS

Creating lineups based on the age or physical characteristics of a suspect is simple with CommandCentral Jail Imaging. Your officers can configure this feature to search for records of inmates who fall within a certain range for date of birth, as well as height, weight and other physical characteristics. You can also choose how many inmate images are displayed in each lineup.

DATA SECURITY

Sensitive information is protected in the Imaging module with customizable restriction options, empowering your jail personnel to grant full access to some files while restricting others. CommandCentral Jail's security features allow personnel to lock specific files or hide them completely from those who do not have viewing privileges, as well as give specific officers the ability to modify files.
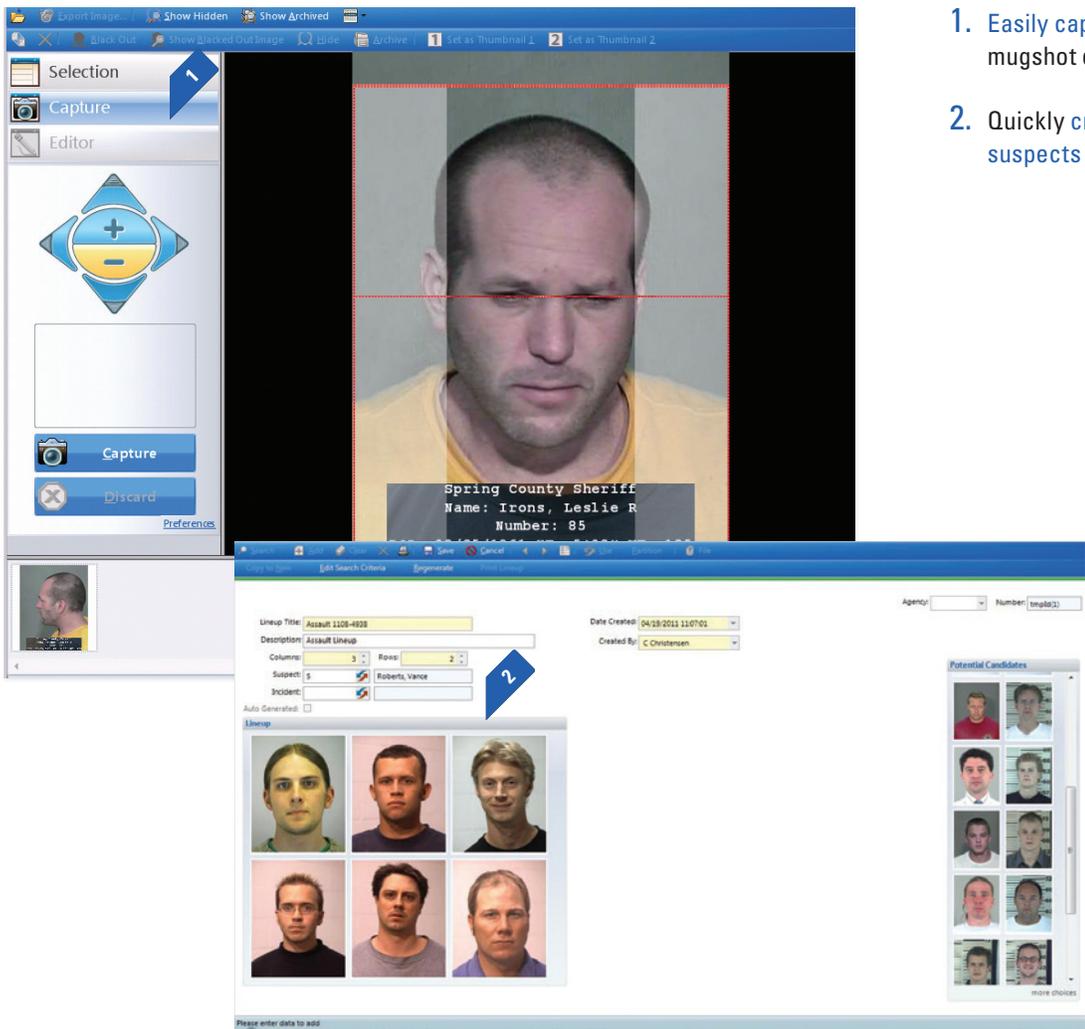

FILE DESCRIPTION

The CommandCentral Jail Imaging module gives you and your team quick access to information about each file attached to a particular record. Easily enter the complete name of each file and create an accompanying description. Icons displayed on the record enable you to see what types of files are attached without even opening them.

INTUITIVE EDITING FEATURES

With the Imaging module, your officers have access to several tools for enhancing and editing the quality of digital images. For example, if photos taken at an accident scene are less vivid than expected, whether too light or too dark, you can easily adjust brightness, sharpness and contrast with the click of a button. You can also rotate and resize the images as needed.
