Link

Connected CAD systems. Unified response.

MOTOROLA SOLUTIONS

See and share incident data

Synchronize response with neighboring organizations

In public safety, incidents that occur on or near the borders between jurisdictions pose unique challenges, and the potential to duplicate efforts and resources. Link is a cloud-based network that securely connects CAD systems, allowing you to see and share incident data, unit status and locations in near real-time. Whether you just need to see what's happening nearby or wish to fully synchronize your response with a partner agency, Link scales to meet your mission.

Radius Map

Gain near-real-time regional awareness by visualizing neighboring agencies' CAD incidents and mutual aid resources alongside your own 911 calls for service.

Secure one-way visibility

Access real-time operational data and incident details from nearby jurisdictions.

Unified mapping interface

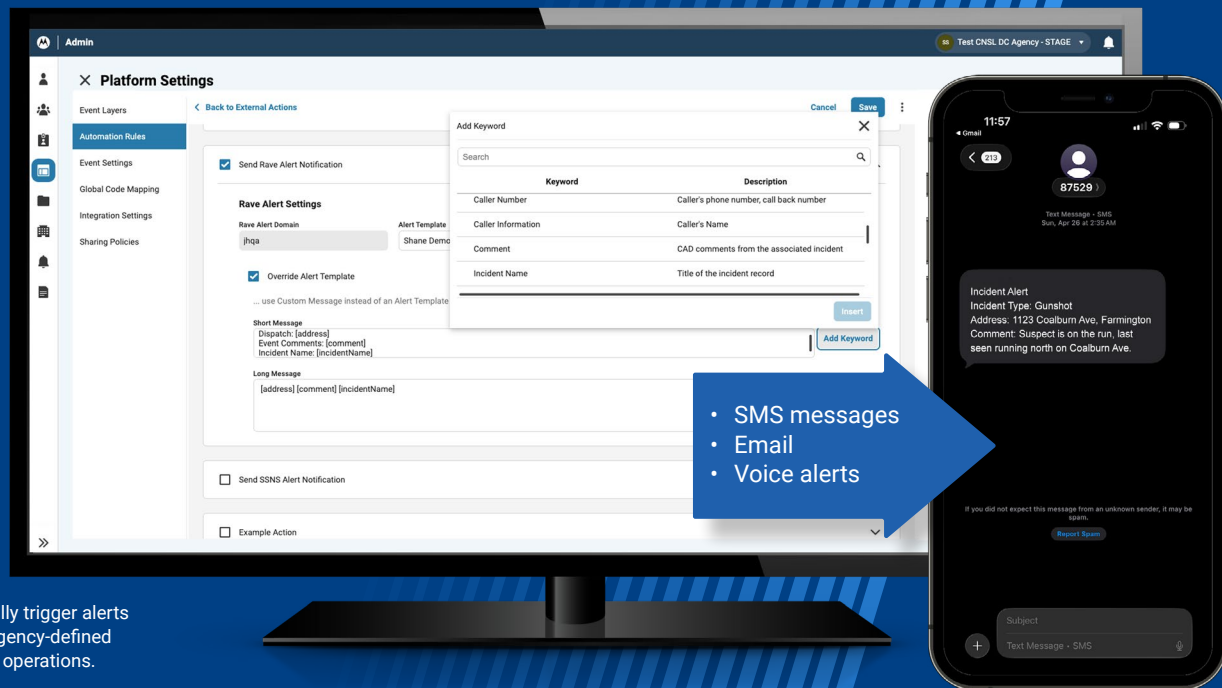

Consolidate external CAD data and your own agency's 911 calls into a single, comprehensive map view for a common operating picture.

Enhanced resource coordination

Plan for special events and updates to your technology stack by engaging software experts in advance.

Automatically trigger alerts based on agency-defined criteria and operations.

- SMS messages
- Email
- Voice alerts

Focus on operations without missing critical updates

Speed response and coordinate across jurisdictions with automated alerts

Link Contributor

Accelerate multi-agency response times by automating incident-specific notifications and sharing CAD data through a granular, policy-driven rules engine.

Automate cross-jurisdictional alerts

Trigger automatic, incident-specific notifications via text, voice, or email to engage partners and stakeholders across boundaries.

Easy-to-use rules engine

Use the interface to set up and manage automatic CAD and AVL notification rules-based on specific incident types, data fidelity and real-time conditions you define.

Proximity-based updates

Empower authorized external partners with curated, real-time updates for incidents occurring specifically within their geographical boundaries.

Bridge the gap between neighboring organizations

Turn complex response protocols into frictionless workflows while maintaining full local control

Link Exchange

Link Exchange automates mutual aid coordination across different CAD systems, replacing manual outreach with streamlined, pre-approved protocols. Manage cross-border incidents while meeting every agency's unique requirements.

Bidirectional interoperability

Automate the creation of cross-jurisdictional incidents and synchronize real-time status updates across all participating PSAPs simultaneously.

Full lifecycle incident management

Synchronize unit status, mutual-aid workflows and incident handoffs or closures from the start of a call to the finish.

Scalable statewide connectivity

Manage complex data sharing and regional routing across large, multi-agency groups or expansive statewide networks.
