

Proven for today. Flexible for tomorrow.

Expanding the CAD, Mobile, Records experience through subscriptions

The CAD, Mobile, and Records public safety suites by Motorola Solutions are designed to meet the current and evolving needs of public safety organizations.

We know that customers have invested significantly in their public safety software systems, which are primarily on-premises. Hybrid technology, a more modern approach to evolving public safety technology ecosystems, is demonstrating the value of cloud features alongside on-premises systems.

Expand your ecosystem

Access cloud-enabled tools that seamlessly integrate with your system to make each user's job more efficient and easier.

Predict your costs

Gain upfront control over budget forecasting without constantly having to 'prove' the need for new tools in the budgeting process.

Update regularly

Enjoy automatic updates and easy access to the newest cloud and AI-enabled features to create a more convenient and effective process for your agency.

Extend your public safety workflows with hybrid-delivered features

A hybrid approach allows organizations to experience the benefits of a mature, feature rich and tested public system while exploring the flexibility of the cloud. Adopting a hybrid approach allows customers to expand their organization's technology stack without sacrificing their existing system investment.

For public safety organizations, the benefits of a subscription system include:

Flexibility and control

Adopt cloud features incrementally, tailoring implementation to current workflows and timelines. This allows for an easier experience, ensuring compliance, alignment with leadership needs, and budget considerations.

Enhanced efficiency and faster deployment

Streamline workflows by selectively integrating cloud features where they provide the most value. This approach allows organizations to test and experiment with non-critical functions before potentially migrating mission-critical workflows to the cloud. Cloud-connected features enable faster deployment of new solutions, streamlining workflows and optimizing operations.

Datasecurity and resilience

Leverage hybrid systems to combine on-premises and cloud data storage, providing data backup and reducing risk. Cloud features benefit from faster patching, improving security and accelerating response times in case of cyber incidents.

Continuous innovation and simplified integration

Access the latest public safety software advancements. A hybrid approach ensures organizations remain at the cutting edge of technology and continue receiving value over time. Seamlessly integrate third-party applications and other Motorola Solutions products, enhancing interoperability and data sharing through a common API architecture.

Improved security and scalability

Leverage a cloud-based infrastructure that offers inherent security advantages and the potential for scalable growth as customer needs evolve. Easier, more frequent security updates increase system security and remove the physical security risks of on-premises systems.

Financial optimization

The subscription model simplifies financial planning, shifting to a recurring operating expense rather than large upfront investments. It will improve the efficiency of the procurement process for customers as hybrid features can be enabled as they are developed with a simple amendment to a subscription contract. This allows the organization's operations to shift off of managing their public safety software to using it for their operations.

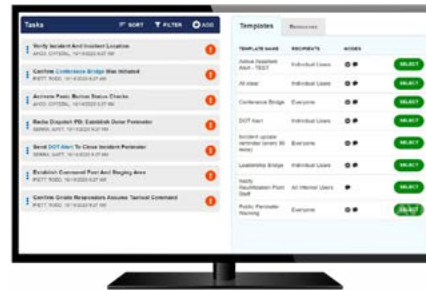

Leverage the power of the subscription today

With a subscription, Motorola Solutions customers can leverage hybrid technologies across the public safety workflow. Deploy hybrid innovations that can help improve operational efficiency, responder safety, and streamline communications.

CAD Web Client

Extend dispatch capabilities to non-traditional environments with an intuitive web-based CAD Client. Leverage the streamlined user interface in training new telecommunicators, building confidence and meeting the needs of a younger generation.

Internal agency alerting

Communicate and collaborate within one platform to eliminate response risk and challenge. Notify key stakeholders, establish clear responsibilities, and provide directions or tactical decisions.

Automated incident workflows

Configured keywords from your CAD automatically trigger public safety workflows. The corresponding map displays CAD incidents, even across jurisdictions to better share data between agencies.

Mobile companion CAD application

Extend the CAD environment to responders in the field with an intuitive mobile companion application, available on mobile devices and MDTs. Updates, alerts, and critical incident information is shared immediately between the telecommunicator and responder. When paired with the mobile forms and citations functionality, one purpose-built mobile application will now handle response and reporting workflows while in the field to enable faster digital evidence collection and improve situational awareness.

Helping build safer communities

We build and connect technologies that are solving for safer communities, safer schools, safer hospitals, safer businesses - safer everywhere. Our solutions take your public safety software operations to the next level while laying the foundation for the future.
