

BODY-WORN CAMERA INTEGRATION WITH A VIDEO MANAGEMENT SYSTEM (VMS)

COMBINE BODY-WORN AND FIXED VIDEO. GAIN A FIRST-PERSON PERSPECTIVE.

CHALLENGE

Fixed video is a crucial part of your operation. By improving situational awareness and minimizing blind spots with high resolution, wide-area coverage, you can have complete insight over the space which is relevant to your organization - no matter how large. But sometimes, you need a live first-person viewpoint, so you can see and hear what your team is experiencing in real time - whether that's a confrontation with a customer or a potentially hazardous situation. How can you leverage your existing fixed video infrastructure, while also introducing a new perspective on the ground?

SOLUTION

Motorola Solutions VB400 body-worn cameras are compatible with any Video Management System which supports ONVIF Profile S, so you can stream high-quality video to the same software which handles your existing static video feeds. No more toggling between different platforms; instead, you can focus on getting the bigger picture and helping your team when they need you most. But the connectivity doesn't end there - a simple button-press can trigger other VB400s in the vicinity to start recording immediately via Bluetooth, so all angles of an incident are captured and streamed. And once the situation has been resolved, you can use our advanced body-camera management software, VideoManager, to quickly review and share the footage for training or prosecutorial purposes.

VideoManager can also securely pass the footage on to your VMS after the body-worn cameras have stopped streaming, using ONVIF's Profile G interface.

VB400 BODY-WORN CAMERA

With a shift-long battery life, IP67 rating and a variety of mounting options to suit all kinds of uniforms, the VB400 is designed to fit seamlessly into your team's daily workflow - whatever that entails. The combination of WiFi streaming - either over a hotspot or a fixed network - alongside Bluetooth and GPS ensures that your team is connected and accounted for at all times, even when they're on the move or in the field.

VIDEOMANAGER

Motorola Solutions VideoManager is a browser-based solution which gives you complete control over your suite of body-worn cameras - no matter how large or small. In addition to core device management functionality, VideoManager provides you with powerful tools to retain, process and share media from both your body-worn cameras and external sources. But you're not limited to reviewing footage retroactively; VideoManager also acts as an ONVIF-compliant interface, passing live streams from your body-worn cameras to a VMS such as Avigilon Control Center (ACC)[™].
