

VIDEOMANAGER

ADVANCED MEDIA, DEVICE AND USER MANAGEMENT SOFTWARE

Secure, flexible and scalable - VideoManager's intuitive user interface simplifies the management of your body-worn camera deployment.

NEW FEATURES

Automatic Incident Creation	VideoManager collates videos and metadata into incidents automatically, based on how those videos have been categorised with custom fields (e.g. dropdown menus and checkboxes).
Automatic EdgeController and DockController Firmware Upgrades	Ensure your suite of EdgeControllers and DockControllers always have the latest firmware, eliminating manual upgrades. Configure a specific timeframe for DockController firmware upgrades, to minimise workflow disruption.
System Configuration Export and Import	Export your unique VideoManager configuration - including deletion policies, device and WiFi profiles, and roles - to one XML file. Import the same configuration into another instance of VideoManager, to ensure consistency across your organisation.
Anti-virus Integration with OPSWAT*	An added layer of protection for your organisation: use alongside your Asset Import capability to scan imported media for viruses.
Playback Watermark	Superimpose a unique signature over videos during playback, to discourage illicit screen-recordings.

CONNECTIVITY

VMS Integration	Integrates with Avigilon Control Center, Milestone XProtect and Genetec Security Center.
Site / Centre Capabilities	Can be enabled as a Central VideoManager, to which other instances of VideoManager ("sites") can be connected.
Live Streaming to a Cloud Service	VB and VT series body-worn cameras can stream directly to a cloud service of VideoManager while downloading footage to an on-premises instance of VideoManager.
CommandCentral Vault Integration	Connect VideoManager to CommandCentral Vault, for footage storage and correlation with other CommandCentral Suite applications. Requires "CommandCentral Vault" subscription.
VB Companion App*	View and categorise footage from your smartphone within the field, then upload it to VideoManager for review.

WORKFLOW CONTROL

Granular Permissions	Users can only access the parts of the VideoManager interface which are relevant to their workflow.
Granular Sharing	Incidents and videos can be automatically or manually shared between users and groups on VideoManager. Incidents can be shared with workers who are not on VideoManager, using time-sensitive links or exports.
Permissions Overview	Administrators can see the permissions associated with a user, and how they got those permissions.
Privilege Escalation	Authorised users can temporarily elevate their privileges for a limited time, in order to perform certain actions on VideoManager.
Deletion Policies	Configure how long footage is kept on VideoManager before it is deleted.
Self-service Automatic Account Creation*	Users can create their own account with a URL and an email address; administrators can dictate with which roles these users are associated.

SCALABILITY

Bulk Edit	Large numbers of incidents can be instantaneously deleted or added to incident collections. Large numbers of body-worn cameras can be assigned or upgraded in parallel.
User Groups	Put multiple users in a group for sharing and management purposes. Groups can be supervised by individual users, or other groups.
Reports Creation	Download reports detailing various aspects of VideoManager activity e.g. when devices were docked and undocked.
Live Statistics	View real-time statistics with information about how VideoManager is being used.

MEDIA IMPORTS

Imports*	Non-body-worn camera media (PDFs, videos and still images) can be imported into VideoManager and added to incidents.
Supported File Formats and Extensions	<ul style="list-style-type: none">• MP4/MOV - .mp4 .mov .m4a .m4v• JPEG - .jpg .jpeg• MP3 - .mp3• AVI - .avi .av• MPEG-PS - .mpg .mpeg .vob• MPEG-TS - .mts .ts• PNG - .png• WMA (ASF) .wma• WAV - .wav

* Some features require additional licences.

** Directly-attached USB devices are not supported on Windows Server 2016 and later.

EVIDENCE PREPARATION

Incident Creation	Group footage and other important media in an incident for ease of review.
Incident Collections*	Put multiple incidents in an incident collection for sharing and management purposes.
Video and Media Redaction	Redact footage and images using effects like blurring, pixelation, and highlighting. Audio, text, and zoom redactions are also available.

SECURITY

Comprehensive Audit Trail	A comprehensive audit log of every action performed in the system is created. Users can create and download audit logs to view these actions if necessary.
Access Control Keys	Without a device's access control key, undownloaded footage on a device is inaccessible.
File Space Encryption	Footage, report and export files are automatically encrypted for extra security.

TECHNICAL SPECIFICATIONS

Compatible Server Platforms	<ul style="list-style-type: none">• Windows 8.1 Pro & Enterprise 64-bit• Windows 10 Pro & Enterprise 64-bit• Windows Server 2012 Essentials, Standard & Datacenter• Windows Server 2012 R2 Essentials, Standard & Datacenter• Windows Server 2016 Essentials, Standard & Datacenter **• Windows Server 2019 Essentials, Standard & Datacenter **
Compatible Client Browsers	<ul style="list-style-type: none">• Microsoft Internet Explorer 11 (Windows 7/8.1/10)• Microsoft Edge 14+ (Windows 10)• Firefox 47+ (Windows 7/8.1/10)• Chrome 48+ (Windows 7/8.1/10, MAC OS X v10.10)
