

TURN YOUR VEHICLE INTO A BODY-CAMERA HUB

THE V300 VEHICLE KIT

More than ever before, citizens expect and rely on video evidence from law enforcement cameras to provide transparency of incidents. When body-worn cameras are integrated with in-car video systems, incidents are captured from multiple viewpoints with supporting metadata —ensuring the full story is captured every time.

Even without an in-car video system, patrol officers benefit from integrating body-worn cameras with their vehicles. It's a source of power, connectivity and contextual information that shouldn't be ignored. That's why we created the V300 Vehicle Kit.

GROUP, TRIGGER & UPLOAD YOUR BODY-WORN CAMERAS

GROUP MULTIPLE CAMERAS

Capture the full picture with multiple viewpoints of an incident. The V300 vehicle kit enables you to associate several V300 body-worn cameras as a group. Whenever one camera in a group is activated, all other cameras within WiFi range of the vehicle will also be activated.

Grouping is done either in the device management software, or using the in-car WiFi docking station. The vehicle kit relays trigger signals to all cameras in the group. When the event footage is uploaded, you'll see event playback is automatically synchronized for convenient viewing.

TRIGGER CAMERA RECORDING

Ensure your community knows that every event will be recorded, even when an officer isn't able to press the record button. When you install the V300 vehicle kit, you can create interfaces to vehicle-based triggers that activate your body camera wirelessly and automatically.

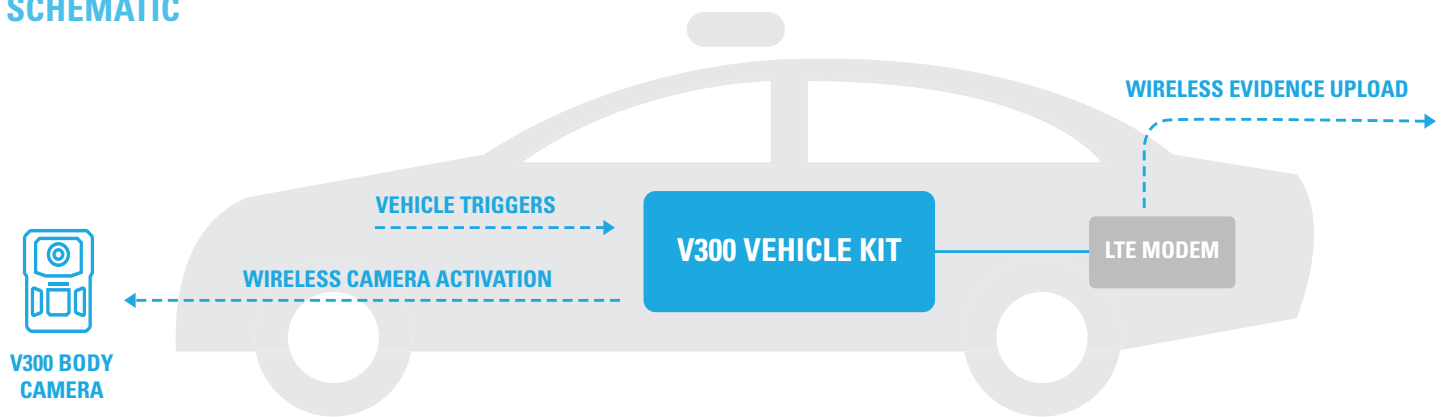

For example, you can trigger a recording whenever the vehicle's lights or siren are activated. You can also trigger from any other switched input such as when the driver's door opens, or the gun-lock is deactivated.

UPLOAD VIDEO EVIDENCE

Send critical video evidence back to headquarters while still in the field. The V300 vehicle kit includes a docking station for your vehicle. When a V300 is docked, it can use the vehicle kit's WiFi capability to upload video evidence from the camera to your evidence management system.

And if you connect a Sierra Wireless LTE modem or router, you can upload video evidence from anywhere there is FirstNet or other LTE coverage.
