

Alert NXT

Communication without borders. Resilience without limits.

Your top priority is the safety and connectivity of your people, but that's hard to guarantee when you're combatting fragmented data and alert fatigue. You shouldn't have to settle for basic tools that force you into manual updates or all-call blasts that your team eventually learns to ignore. When critical information gets buried in a noisy inbox, it isn't just a technical glitch — it's a gap in your ability to protect your organization and account for your team when it matters most.

Alert NXT closes that gap by transforming how you reach your people. You aren't just buying a notification tool; you are strategically setting up your organization for a future of total resilience. You gain the precision to send the right message to the right person at the right time — whether that's a specific building or a global team — all while laying the foundation for business continuity and incident management.

Real conversations, not just blasts

Transform one-way broadcasts into interactive conversations that provide instant clarity on your team's status and safety.

Connection at the mobile edge

Deliver high-priority information through a dedicated, secure mobile experience that cuts through the noise of everyday digital clutter.

Global reach with local precision

Reach every employee across the globe, so the right people stay informed through the channel that works best for them.

A resilient foundation for the future

Build your communication strategy on a modern resilience platform designed to evolve alongside your organization's safety and resilience needs.

Key features

Command communications with precision

Bypass the noise of all-call blasts by using geospatial targeting and dynamic query lists to reach exactly who needs to know — whether it's a specific floor, building or custom radius.

Confirm accountability and wellness

Turn a broadcast into a two-way conversation, using instant “Are you safe?” polls across SMS, email and voice to get a real-time headcount and meet your duty of care.

Modernize the employee experience

Provide your team with a trusted, secure safety inbox within the Engage mobile application, confirming your critical instructions aren't lost in a crowded personal inbox or filtered as SMS spam.

Automate your administrative burden

Eliminate manual spreadsheet updates with Active Directory integration and SCIM provisioning, which automatically synchronizes your contact data and revokes access the moment an employee leaves.

Execute with enterprise-grade security

Safely delegate alerting permissions to department heads using Role-Based Access Control (RBAC), ensuring they have the tools to protect their teams without compromising your entire system.

Plan for what's ahead with the Motorola Solutions Resilience Platform

Give your organization the gift of clarity when things get chaotic. With Alert NXT, you gain a powerful, easy-to-use system that works exactly when you need it today, while knowing you've already done the hard work of preparing for whatever comes next.

Alert NXT is a core part of the Motorola Solutions Resilience Platform, so you have the total freedom to grow at your own pace. When you're ready to expand into deeper areas of risk resilience, you can simply unlock advanced modules like business continuity, security management or crisis management on the same platform where your people and data already live — meaning no new vendors, no messy migrations and no limits on how resilient your organization can become.
