

PSCore Supplementary Duress

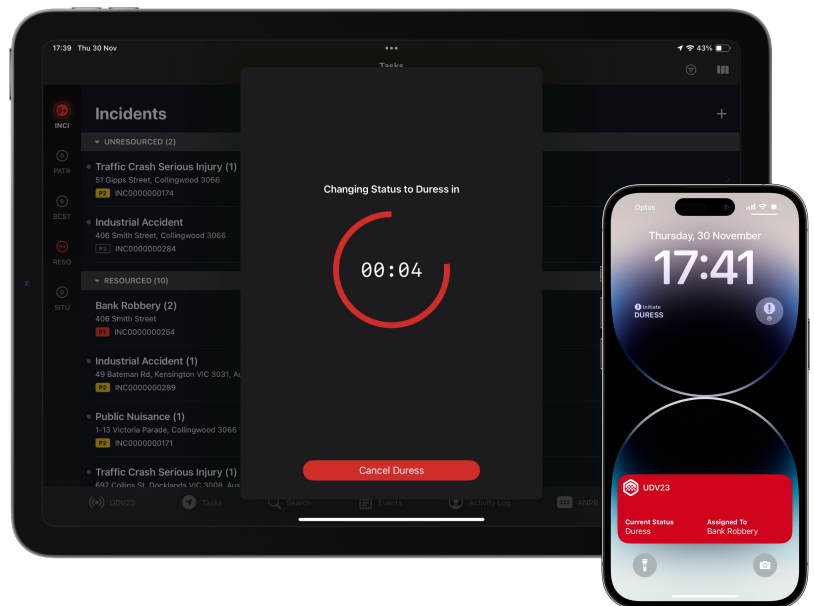

Whether you're a paramedic trying to treat a hostile patient or a police officer on the scene of an unfolding incident, there are many situations over the course of your shift in which you may need to quickly and discreetly call for help. With the PSCore app, your team can now send an automated alert to your organisation's CAD system via their phone or tablet when they are under duress.

Get backup quickly and reliably

When a first responder triggers Duress on their phone or tablet, PSCore automatically sends an urgent alert to your CAD. The app can also be configured to send a critical notification to surrounding units to ensure your responders get immediate help when and where they need it.

Avoid false alarms

PSCore puts multiple safeguards in place so your team doesn't trigger Duress accidentally; for example, their phone or tablet provides clear confirmation when the user is going - or has gone - into Duress.
