MAINTAIN ORDER.
KEEP THE PEACE.

COMMANDCENTRAL JAIL
**JAIL & INMATE MANGEMENT**

MOTOROLA SOLUTIONS

FOSTER SAFE, SUCCESSFUL REHABILITATION

When you're managing inmates and worried about keeping your officers, inmates and the public safe, the last thing on your mind should be if your jail and corrections management software can keep up with the times. This can pose a challenge if your team is overworked and understaffed and your jails are overcrowded, leaving your officers to take on multiple jobs and potentially putting the safety of them and inmates at risk.

CommandCentral Jail helps you simplify and streamline the complicated offender intake process while also improving inmate and officer safety with automation, alerting and increased awareness of jail and inmate activity. Your team can also gain confidence during inmate releases with the ability to intelligently track sentencing and verify inmates' identities using biometric data. CommandCentral Jail provides an officer-oriented experience that helps your team be successful across all job responsibilities and is built to integrate widely with other systems you use - all while remaining completely secure.

STREAMLINE OFFENDER INTAKE

With inmates constantly moving in and out of the facility, efficiency has to be one of the top priorities at any jail. By quickly booking offenders and getting them into housing, you not only create a safer environment but you also get officers back on the streets and your team fulfilling more of their other daily management activities. CommandCentral Jail is designed to reduce the time it takes to successfully receive an offender and get them behind bars.

AUTOMATED PRE-BOOKING

Many jails have to complete the booking process by re-capturing data that was already collected in the field on the arrest report, creating a redundant and frustrating process for personnel. With CommandCentral Jail, this information is automatically pre-populated into the system before prompting your officers for any further details, saving valuable time on the intake process and ensuring data integrity.

CONFIGURABLE BOOKING CHECKLIST

The offender intake process can be tedious and it's easy for your officers to become overwhelmed, especially when the jail gets busy. Configure the booking checklist to meet your jail's individual needs and guide your team to book offenders quickly and efficiently, saving time and energy during peak busy times.

INTAKE INTEGRATIONS

Your jail may rely on a variety of different systems during the intake process, including a system for capturing inmate photos, another for evidence collection and even one for fingerprinting. Seamlessly integrate all of your third-party systems with CommandCentral Jail to automatically make them an essential part of your booking checklist and expedite the overall vintake process.

Supporting Modules: LiveScan Fingerprinting, Imaging

DYNAMIC ASSESSMENTS

Getting prisoners into the right jail housing and under the right supervision is critical to maintaining order and control. Utilize guided assessments to assist your officers in determining the correct living arrangements for each offender and their supervision requirements.

IMPROVE JAIL SAFETY

A lack of data can directly impact awareness for your jail personnel, potentially putting them in dangerous situations and your jail at risk of lawsuits if something were to happen. CommandCentral Jail provides the safest environment for both your officers and the inmates you're responsible for with access to the information your officers need, when they need it as well as tools designed to help proactively improve situational awareness.

COMPREHENSIVE INMATE PROFILE

Your officers are constantly interacting with dozens of inmates every day and need to be kept up-to-date on each offender's activities. Easily review an inmate's record with the comprehensive inmate profile, which includes any flags, medical details and requests so you can be better aware of an inmate's current status.

Supporting Modules: Inmate Requests, Commissary Management

DAILY EVENT MANAGEMENT

Your team is tasked with a variety of different responsibilities each day that help ensure the jail is running smoothly and inmates are cared for. Simplify your inmate and corrections management by organizing tasks and flagging information that is pertinent for each officer and their assigned duties.

Supporting Module: Inmate Work Assignments

TRACKING & MONITORING

Maintaining a record of inmate status and movement is critical for a jail's success but can be a frustrating task to document manually. Utilizing barcode scanners to automatically track inmate movement and activity lets your officers focus on more pressing tasks, and 'keep separate' alerts notify your team of any potential conflicts.

Supporting Module: Cell Check

INCIDENT LOGGING & DISCIPLINE

Whenever there is an incident within the jail, it needs to be documented so that appropriate action can be taken to remedy the situation. Easily record and track violations and disciplinary actions by logging events directly into CommandCentral Jail. You can then apply the necessary sanctions and assign flags to each offender, which is immediately added to their inmate profile.

Supporting Module: Disciplinary Actions

RELEASE INMATES CONFIDENTLY

Keeping track of each inmate's personal history and sentencing information can be daunting. With an overflooded criminal justice system, sentences can often become complex. Without a solution capable of accommodating this new reality, the public could be put at risk. CommandCentral Jail helps you ensure inmates have served their complete sentence and are ready for re-entry into the community.

INTELLIGENT SENTENCING

Dealing with overcrowding and creative sentences like 'over the weekend', 'nights', or 'x amount of days' can be hard for your team to track. With intelligent sentencing, you can accurately track and account for each inmate's time served, including those with unique sentences.

RELEASE CHECKLIST

It is critical that your team follow the release process for an inmate completely to ensure your jail has accurate records and is abiding by court orders. Just like with booking, a configurable release checklist helps your team successfully complete every item in your process upon releasing an inmate.

BIOMETRIC VERIFICATION

Ensuring the right person is being released is crucial to keeping your officers and the community safe. Inmates with similar features, offenders whose appearances have changed since the time of intake or even the possibility of swapped wristbands can cause complications for your jail during the release process. Confirm an inmate's identity with absolute certainty using biometric verification, which validates that an offender's fingerprints match those originally taken upon booking.

EXTERNAL INFORMATION SHARING

With the influx of offenders coming and going, your jail contains a wealth of information on criminals. Unfortunately, that information doesn't always make its way to other agencies for cross-department sharing. With CommandCentral Jail's corrections management software, you can easily grant access to offender data to your partner agencies for use in instances such as investigations or field searches.

WHY CHOOSE COMMANDCENTRAL JAIL?

OFFICER ORIENTED

Traditionally, jail and corrections management systems have been designed to provide the necessary information and tools based on the location of your officers and specific jobs. But today, many officers have to work across the jail from intake to booking to housing and release. That's why CommandCentral Jail provides a cohesive experience that can be configured to your officers' needs so they have access to the information they need from anywhere they are, such as viewing an inmate's profile or being alerted to any 'keep separate' messages. This helps them make more informed decisions, become more efficient at their jobs and maintain greater awareness that can save an inmate's - or even their own - life. Provide your officers with a more intuitive way to receive the information and access to the tools they need with CommandCentral Jail.

BUILT TO INTEGRATE

CommandCentral Jail is focused on making your jail successful by giving your officers the information they need within a single workflow. Use CommandCentral Jail to extract and pre-populate arrest information into an offender's booking form from your own records management system (RMS) or even other agency's systems, reducing duplicate data entry and significantly speeding up the intake process. Integrating your other jail technologies helps to keep your officers focused on their jobs rather than updating records between disparate platforms. When an inmate is being released, the same RMS integrations that helped share information to speed up the intake process can be leveraged to provide your partner agencies with valuable details on that former inmate as well as provide better awareness and insight for your officers going forward.

COMPLETE SYSTEM SECURITY

Safeguard your sensitive jail data with comprehensive security while still allowing your agency to meet state and FBI Criminal Justice Information Service (CJIS) security requirements. CommandCentral Jail employs Advanced Encryption Standard (AES), the modern standard for data encryption, to help protect your sensitive data as it is shared over public networks. All access to and protection of your information is controlled by parameters you set. Audit logging helps your administrators determine whether or not a user is accessing and utilizing the system outside of its intended uses and can also help you ensure data entry standards are being followed and where additional training might be needed. Control who has access to what data with partitioning and detailed permissions, even in multi-agency deployments.

We build software for mission-critical environments where every second matters. By unifying data and streamlining workflows from call to case closure, our CommandCentral software suite puts your information to better use, improves safety for critical personnel and restores your focus on the communities you serve. Backed by a trusted, 90-year veteran with proven public safety leadership, our suite is transforming the public safety experience with a focus on evolution, not revolution, in order to help you digitally transform your operation.
