# VehicleManager Mobile

Use the power of vehicle intelligence, anywhere.

# Critical vehicle intelligence in the palm of your hand.

Seconds count in the field. Instant access to comprehensive vehicle intelligence can be the difference between a cold lead and successful apprehension.

VehicleManager Mobile turns a user's smartphone into an LPR analysis tool, providing officers with real-time identification and critical investigative insights so they can close cases anywhere.

## AI-powered Search Assist

Locate vehicles of interest, even without a license plate.

## Day/time plate trend analytics

Intercept suspect vehicles more efficiently.

## Single and multi-plate scanning

Capture and upload critical evidence from any location.

## Real-time hot list management

Turn passive data into proactive alerts for immediate action.

# AI-powered Search Assist

No license plate? No problem. With AI-powered Search Assist, users can leverage the power of natural-language queries to identify vehicles of interest faster.

## Find vehicles without a license plate

Just describe the vehicle of interest in natural language - make, model, color - and Assist will find (and map) matching images.

## But don't stop there...

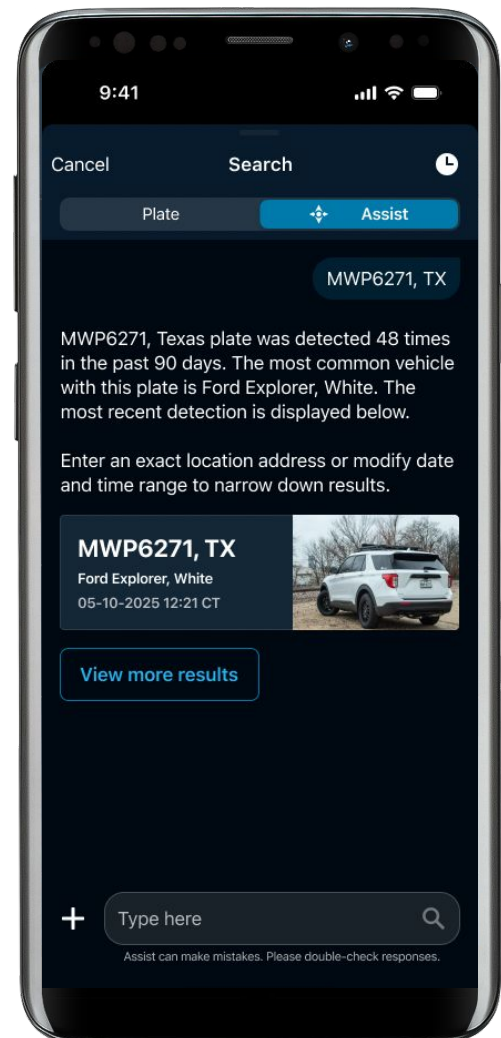

AI-powered Search Assist recognizes additional aspects of the vehicle - like accessories, damage, and promotional writing or bumper stickers - to help narrow your search.

## Refine your search

Assist's conversational interface helps iteratively refine the search with added details, speeding up the process of locating vehicles of interest.

## Operate confidently and responsibly

Assist functions exclusively and securely on your agency's data within VehicleManager, and all queries are fully auditable for transparency.

# Day/time plate search analytics

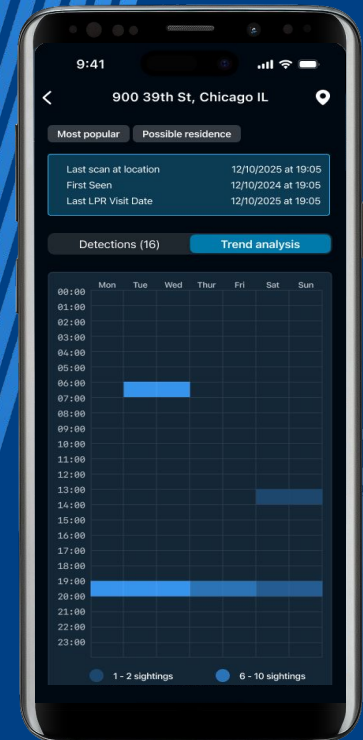

Your time is precious. With day/time plate trend analytics, investigators can determine the most optimal moment to intercept suspect vehicles.

## Capture essential details

VehicleManager Mobile displays key time information like last scan at location, first seen and last LPR visit date.

## Turn raw data into actionable insights

Analyze visit pattern heatmaps, location rankings and visit popularity statistics to pinpoint exactly where vehicles are most likely to be found.

# Single and multi-plate scanning

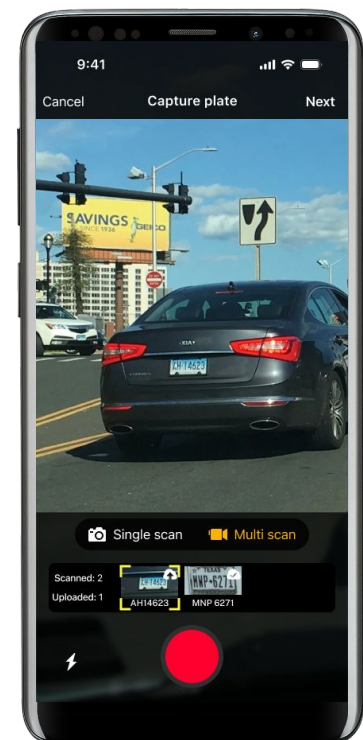

Read license plates with your mobile phone. With single and multi-plate scanning, patrol officers can scan and upload plates to their database while out in the field.

## Close intelligence gaps

Seamlessly scan and upload license plate data from any location, without relying on existing LPR infrastructure.

## Gather critical evidence

Upload plates to your Capture Gallery and review them before they're uploaded to your database, ensuring you have the evidence needed to close more cases.

# Real-time hot list management

Maintaining situational awareness is critical. With real-time hot list management, users can tag and add plates to hot lists to instantly notify the right personnel when a vehicle is detected.

## Right information, right time

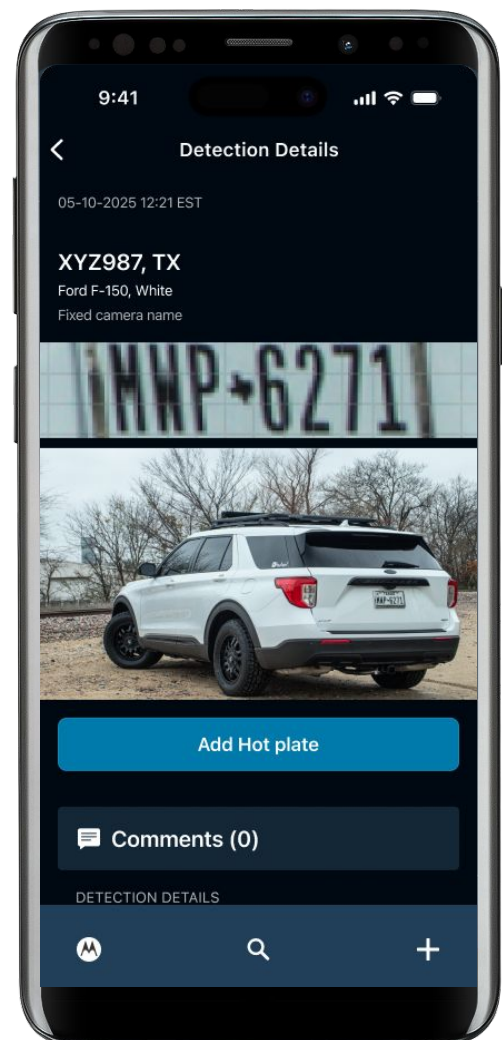

Add plates to relevant hot lists after they've been scanned to ensure the right personnel receive the vital intelligence they need.

## Instant alert notification

When a hot plate is detected, VehicleManager Mobile will immediately send a push notification to all designated personnel through the VehicleManager Alerts functionality.

## Provide critical context

Add comments in the Hit Details screen to offer additional knowledge or safety information about a vehicle, so you and your team have all the details you need to close cases.

# Built to keep communities safer

To do license plate recognition well, you need the right tools for the job. With fixed, mobile, trailer and quick-deploy camera systems, video-based integration and even mobile apps, you have options and flexibility to capture the license plate data you need. All of these are equipped with our in-house developed, industry-leading LPR algorithm that is relied upon by law enforcement agencies worldwide.

Beyond ensuring you can collect the data you need, VehicleManager combines robust hot list management and alerting options with patented search and data analytics to equip your team with the insights they need to close more cases, faster.

Our software also keeps you in complete control of your data and systems. You are the sole owner of your cameras and data, and the manager of your data retention policies, in accordance with applicable statutory or legal restrictions. Our license plate recognition portfolio is designed for secure and responsible use.

Finally, to help you get the full benefit from your system, you also have access to 24/7 support and free in-person, on-demand and virtual training courses. Our expert trainers are all former users of the system, and can provide the real-world guidance to help you succeed.
