SCALABLE SOLUTIONS QUICKLY DELIVER LTE CONNECTIVITY WHERE AND WHEN YOU NEED IT

Lessons learned from past events are clear – at the very time it’s needed most, commercial cellular systems can quickly become overloaded or even completely destroyed, rendering communications and data capabilities useless.

LXN 6000 LTE Infrastructure solutions from Motorola Solutions ensure public safety, government agencies and other critical services always have the coverage and capacity needed for special events, man-made or natural disasters and remote area operations.

You operate in a dynamic, continually changing environment with growing demand for real-time information to improve decision making. To address this reality, you need to have instant control over your LTE broadband network to create coverage and capacity whenever and wherever the mission requires it.

Private LTE Portable Infrastructure from Motorola Solutions delivers a robust mobile broadband communications platform you can trust. By offering a range of options, it enables you to quickly and easily create ad hoc, standalone networks, augment existing networks and add new levels of system resiliency for business continuity and disaster recovery. Whether it’s adding capacity to cover a sporting event, ensuring coverage for emergencies in isolated areas, or quickly replacing downed communications due to a disaster, you’ll have the security, priority, control and speed essential to get the job done safer, smarter and faster.
**LXN 6000 LTE INFRASTRUCTURE**

**TYPICAL USE CASES**
Designed for portable, semi-permanent or fixed installations, LXN 6000 LTE Infrastructure is the flexible solution you need to establish coverage and capacity where and when you need it. Quickly and easily create ad-hoc, standalone networks, augment existing networks and add new levels of system resiliency. Be ready for special events, man-made or natural disasters and remote area operations and improve business continuity and disaster recovery capabilities.

KEY HIGHLIGHTS

Supports Mission Critical Operations: Provide access to fast mobile broadband connectivity with real-time access to voice, video, data and chat.

Fast Deployment: Set up and go live quickly and easily.

Standards-Based Technology: Ensure interoperability with equipment from multiple vendors.

Scalability and Expandability: Operate standalone or connect to your network.

Expanded RF Coverage: High-performance LTE devices and base stations provide coverage and capacity for existing networks, in remote areas where none exists, or where there has been a network outage.

Operations and Management: A comprehensive network configuration tool provides subscriber provisioning and local alarm monitoring.

High Availability: The high reliability of the Evolved Packet Core and base station together contributes to high availability.

Applications Suite: Deliver high-definition video streaming using Motorola Solutions Real-Time Video Intelligence (RTVI). Enable seamless voice interoperability across LMR and broadband networks, and make secure VoIP push-to-talk calls with WAVE Work Group Communications. Provide greater situational awareness through real-time tracking of personnel location and status.

STANDALONE NETWORK MODE
From creating coverage where none exists in remote areas, to establishing secure communication bubbles around teams, vehicles and structures, or quickly enabling coverage in a network outage, standalone network mode meets the challenge to facilitate the flow of real-time information and improve your operations.

Each SOW node operates as a standalone unit, consisting of the Radio Access Network (RAN), Evolved Packet Core (EPC), subscriber provisioning, and network management. The Home Subscriber Server (HSS) in each SOW is a local entity. The users attaching to each SOW are provisioned on the HSS of that SOW. A set of SIM cards is provisioned on the HSS of that system before the SOW is deployed in the field.

CUSTOMER CONNECTED NETWORK MODE
Augment the coverage and capacity of existing networks by connecting a SOW or multiple SOWs to a common location using transmission backhaul (fiber, microwave, or satellite). Take advantage of this connection to authorize users and monitor the status of the entire network in real time. With connection to your network, you have access to your applications and services including: databases, video servers, computer aided dispatch (CAD), electronic reporting, email, and GIS.
### 4G LTE

<table>

<tbody>
<tr>
<td>Release</td>
<td>3GPP Release 10</td>
</tr>
</tbody>
</table>

### EVOLVED PACKET CORE

- **Computer**: Four – 2.5GHz/12-core/30MB/120W
- **Memory**: 256GB
- **Storage**: 2TB SSD
- **Networking**: 2 x 4 x 1 GbE embedded
- **Power and Cooling**: Hot Plug Power, High Performance Fans
- **Dimensions**: 1.7” (4.32cm) Height x 17.11” (43.47cm) Width x 27.5” (69.85cm) Length
- **Weight**: 27 lbs (12.25 kg)
- **Form Factor**: 2U
- **Max ENODEB supported**: 15
- **Max Users**: 2000

### ENODEB

- **Supported Bands**: Band Class 14, 20, 26, 28
- **Output power**: Up to 60 Watts
- **Flexible channel sizes from 5 to 20 MHz**
- **2x2 MIMO support**
- **4 way receive diversity**
- **Remote Electrical Tilt (RET) support**
- **Supports -48VDC power supplies**
- **Tightly integrated network and site management system**
- **Full IP connectivity**
- **Gigabit Ethernet transport network interface**
- **Battery backup options available**
- **Standard range of 15 km with license extension beyond 15 km**

### OPERATIONS SUPPORT SYSTEMS (OSS)

Motorola Solutions provides a complete OSS solution for managing the LTE system.

<table>
