

MOBILE INTELLIGENCE CLIENT

INTELLIGENCE IN THE HAND

First responders need to be ready for anything. Whether you are on foot, in a vehicle or at Command and Control, you need to be connected to the intelligence you need to take the right action.

Mobile Intelligence Client mobilises information on smart phones, tablets and laptops. In a single, intuitive interface, you can customise your information sources to suit your requirements within a secure, mission-critical environment. You can achieve higher levels of productivity and safety when you have the information you need for the environment you are in and the task you are performing.

KEEPING CRITICAL DETAILS AT HAND

As an incident unfolds, you need information quickly so you know who or what you are dealing with at all times. Mobile Intelligence Client integrates applications to keep you fully informed.

- **CAD** – Integrate with CAD for unit status, status changes, dispatch and incident management, from field events to reporting.
- **Location** – Make sure you are never alone with location tracking supported by GPS, mobile networks and WI-FI. Google maps are used for local mapping.
- **Secure Communication** – Bring visual intelligence quickly into view; share text and images for the complete picture.
- **Session Management** – Transfer a session to a portable device from an in vehicle terminal.
- **Query** – Access state query services, including name, vehicle, license and location checks to increase your time and productivity in the field.
- **Duress** – Call for help or respond to help someone else in an instant with duress activation and reporting.

ENABLING REAL-TIME COLLABORATION

Secure communication functionality puts visual intelligence quickly into view. A picture of a suspect helps officers better prepare before approaching a front door. The photo of a missing child serves as a quick reference point while out in the field or searching a specific area.

A quick message from another field officer improves collaboration.

Mobile Intelligence Client meets the critical communications needs of agencies of all sizes by making it easy for users to send and receive secure messages between devices, department personnel and external contacts.

Cross platform support

Mobile Intelligence Client is supported by iOS and Android, across multiple devices including smartphones and tablets. Your user interface will dynamically re-size and re-adjust to suit the device you are using.

FASTER, SAFER OUTCOMES

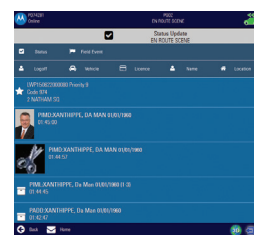

When only relevant information is rapidly and securely delivered to the device in your hand, you have the intelligence you need to monitor the situation with confidence and stay ahead of what's next, wherever you are.

STAY AHEAD OF WHAT'S NEXT WITH MISSION-CRITICAL INTELLIGENCE

New, more sophisticated threats and criminals emerge every day while agencies try to manage increasing workloads at the same time with fewer workers.

Public safety organisations are turning to mobile handheld solutions to provide responders with applications that increase situational awareness, enhance tactical collaboration and enable greater in-field productivity to address these challenges. Built for the way public safety works; it's what sets mission-critical solutions apart.

READY FOR ANYTHING

You are ready to respond when you have access to the right information in the right place at the right time.
