

# IMPROVE SAFETY AND MAKE BETTER DISPATCH DECISIONS

GET A REAL-TIME VIEW WITH PREMIERONE RESPONDER LOCATION

Knowing the precise location of your responders is not only essential for their safety, but also for the safety of your community. Since first responders are often away from their vehicles, on foot or using transportation not equipped with GPS, their true location can be inaccurate or unknown, leading to slower responses and impaired safety.

Integrating secure Motorola public safety radio networks and GPS-equipped radios with our GIS-based PremierOne™ Computer Aided Dispatch (CAD) and Mobile applications gives you greater visibility to your entire operation. Supervisors and dispatchers see an improved real-time view of resources for increased situational awareness and better dispatch decisions. When responders need help, you know exactly where to send back-up. The result is faster and more coordinated responses, smarter decisions and safer outcomes.

## INTEGRATING POWERFUL PLATFORMS

Real-time location information from the field flows across the operation resulting in improved responses, awareness and responder safety when you leverage the combination of the Motorola PremierOne™ applications platform, ASTRO® 25 Integrated Voice and Data (IV&D) or HPD systems and Motorola GPS-equipped radios.

## IMPROVING INCIDENT RESPONSE

PremierOne is Motorola's powerful suite of CAD, Mobile, Records and Jail applications specifically designed for the public safety environment. With GPS information provided by our Responder Location solution, PremierOne CAD helps dispatchers make better incident response decisions. Additionally, supervisors using PremierOne Mobile have a clear picture of current activities and can further ensure efficient resource deployment.

## QUICK VIEW MAPPING

PremierOne mapping creates a real-time view of resources and active incidents for a complete picture of organizational deployment, heightened awareness and robust incident and unit management. Configurable map icons provide at-a-glance visual indicators to confirm if a resource is in or out of their vehicle, as well as their location and agency type. Mousing over the icon quickly displays additional details such as first name, last name, unit ID and incident type for immediate confirmation of responder information.

## EMERGENCY ACTIVATION OVERRIDE

We understand that first responder safety is paramount, so if an emergency button is activated or an on-demand poll occurs, the last received position is immediately displayed and a location update is initiated. Location updates continue based on the cadence configured for the responder's unit status.

## ONE REAL-TIME VIEW FOR SMARTER, FASTER DECISIONS

Only Motorola delivers next generation Integrated Command solutions that provide intuitive, real-time convergence, integration and management of voice, data and video. Our solutions give you a unified operational view of incidents that helps deliver faster, safer and more effective response. To learn how PremierOne Responder Location can help you enhance the capabilities and safety of your emergency services personnel, contact your Motorola representative or visit [motorolasolutions.com/integratedcommand](http://motorolasolutions.com/integratedcommand).

## CONTROL RESOURCE VISIBILITY

Administrators can configure the roles with permission to view responder locations on PremierOne CAD and Mobile maps, allowing you to manage the resource visibility you need for your agency and responders.

## OPTIMIZED BANDWIDTH UTILIZATION

Optimization is a key consideration for your network. That's why we've implemented several configurations and options to help you manage utilization and conserve bandwidth. For instance, you can receive positioning from either the GPS-equipped portable radio or the in-vehicle GPS, depending on the responder's status, eliminating duplication of positioning updates. Additionally, you have the flexibility and control to establish position update intervals on several levels, including:

- Unit status
- Incident type
- Priority type
- Distance traveled
- On demand by dispatcher or supervisor
- Radio emergency button activation

## ENABLING MORE MOBILE ENVIRONMENTS

Some mobile environments are more challenging to enable for GPS. Our Responder Location solution is ideal for deployments where Motorola GPS portable radios are used such as foot patrol, motorcycles, marine, bicycles, mounted patrol and ATVs. All of your resources can now easily be located and more effectively utilized across your community.
