Decisions made and actions taken in the first few seconds determine the extent of injury, damage, and even loss of life. To respond quickly, confidently and safely, first responders need accurate situational awareness of the incident as it unfolds.

PremierOne Mobile delivers critical multimedia information, optimized for the mobile environment. It goes far beyond extending CAD data to the field – synthesizing all critical information into actionable intelligence and delivering a single operational view of the situation at hand.

**ENHANCE DECISION MAKING**
Eliminate guesswork assessing a situation – allowing first responders to make more confident decisions, develop a more effective plan of action and ensure better outcomes.

**ACCESS CRITICAL DATA IN THE FIELD**
Timely information as the incident unfolds is critical to maximizing every minute on scene and ultimately controlling and closing out an incident.
MAXIMIZE THE MINUTE

SAVE TIME WITH SMARTER RESPONSES

Every day, first responders have to make life and death decisions in a matter of seconds. They need the best information available, and they need it immediately. The more they know about the situation, the better their decisions will be. They need to maximize every minute in the field to help keep citizens safe.

Whether saving precious seconds with high-priority notifications that are received before incidents are dispatched, getting real-time alerts that notify users of situational changes or accessing critical multimedia information like live video, photos, voice recordings and floor plans, PremierOne™ Mobile quickly turns information into action. With real-time situational intelligence, first responders can feel confident in their decisions because they have instant access to updates as events unfold.

FULLY FUNCTIONAL MOBILE OFFICE

You know how important it is to keep “feet on the street” and improve operation efficiencies. But there are administrative tasks that need to get done. Public safety agencies can take field operations to new levels of efficiency and safety with PremierOne Mobile by transforming the work environment and providing a fully functional mobile office in each vehicle including full incident management functionality.

Field personnel can monitor incidents, see the status and location of other units, query databases, view video and photos, create reports, and interact with personnel across multiple jurisdictions. Geographic map boundaries can be set to send automatic notifications to other units, alerting them to ongoing operations or hazardous areas. Mobile users can also dynamically update new information, create incidents and dispatch themselves directly from the Mobile Client.

Bottom line, PremierOne Mobile makes field personnel more effective and helps keep them out on the street protecting the community.

SINGLE-TOUCH ACCESS

Information overload can be just as dangerous as not enough information. Simplify information access with easy, one-touch navigation to critical data and functions. Each dispatch automatically provides first responders with crucial historical information on people, vehicles, premises, hazards and prior incidents, along with visual and voice drive directions. When a first responder receives a dispatch notification, one touch of the screen acknowledges the incident, sets status to “enroute,” alerts dispatch to the officer’s location and provides a full view of incident details. Incident updates automatically display on the Mobile Client, allowing officers to maintain their focus on driving or the situation at hand.

POWERFUL IN-FIELD REPORTING

Unlike other field-based reporting solutions, PremierOne Mobile and Records Mobile Client, is a complete records management application that allows field personnel to create and complete reports whether they are in a connected or disconnected mode. They function together, allowing officers to work from a single platform with a consistent user experience. The ability for first responders to share incident and query data eliminates the need for data re-entry, which reduces errors and saves keystrokes.

The system also provides multi-agency status monitoring and mapping, allowing users to track incident and response statuses in real time. In an emergency, a single screen touch initiates notifications to dispatch, fellow officers and the closest units from other agencies that help is needed.
Technology should be intuitive. It should work the way you work, even under the most stressful and demanding circumstances. To learn and understand the way your users work we have spent countless hours watching and observing police, fire and EMS workers in their normal daily activities and under extreme stress. Our dedicated team of Human Factors experts took all that knowledge and designed the PremierOne™ Mobile application for high-stress, information-filled, mobile environments.

Our intuitive user interface optimizes crucial functionality while reducing complexity. It reduces keystrokes and provides intelligent workflows that alert users, without interruption, to the availability of critical information.

**POLICE OFFICER**
Initiate a traffic stop with just one touch of the screen, saving time. Entering vehicle details, submits a query against local, state, federal and BOLO databases to provide valuable information about the vehicle and registered owner. Using GPS information automatically notify dispatch and co-workers of the incident location more accurately than with radio communications alone.

**FIREFIGHTER**
Monitor important details for personnel accountability reporting while on scene. With the log-on feature record real-time crew and vehicle capability updates including firefighter’s radio identification. Provide accurate automated recommendations to aid dispatch.

**COMMAND STAFF**
Create an instant mobile command and dispatch environment from a vehicle, remote location, or on scene. If disaster strikes and the communication center is not available, monitor status and view maps and video from any location until the communications center or EOC is re-established.

**ADMINISTRATORS**
Effectively manage mobile clients with browser-based remote administration and configuration tools. Remotely modify a single field, reformat a screen or upgrade a mobile client without user involvement or touching the vehicle, helping to minimize vehicle downtime and control costs. Through a Web portal share configurations across PremierOne CAD, Mobile and Handheld.

**BUILT FOR FIRST RESPONDERS**

“PREMIERONE IS SO MUCH MORE USER-FRIENDLY THAN ANYTHING WE’VE SEEN OR USED BEFORE. EVERYTHING IS RIGHT THERE IN FRONT OF YOU, BOTH FOR DISPATCHERS AND FOR OFFICERS IN THE FIELD.”

Cmdr. David Wilson
Ventura Police Department, CA

MAKE FASTER, SMARTER DECISIONS IN TENSE, HAZARDOUS AND LIFE-THREATENING SITUATIONS
TRANSFORM THE WAY YOU RESPOND AND CONNECT

Transform your field operations now and maximize an officers’ time. Saving seconds and lives. Your agency can arm your first responders with real-time, mission critical information – when and where they need it most – so they can respond quickly, confidently and safely. Our multimedia-ready solution provides field personnel with secure full incident management and reporting capabilities to maximize their effectiveness and allow them to spend more time serving their community.

FUTURE-READY PLATFORM

Built on a services-oriented architecture (SOA) and using Microsoft®.NET, the PremierOne™ Suite – CAD, NG9-1-1 Call Control, Mobile, Handheld, Records and Jail – share a common platform that streamlines the exchange of information and makes it actionable. This standards-based framework provides CJIS compliant, two-factor authentication including DES encryption for secure access to multiple agencies, systems and databases, as well as supporting interfaces to third-party applications.

STAY CONNECTED WITH A HANDHELD DEVICE

Integrated with the PremierOne platform, Motorola Solutions’ PremierOne Handheld application extends command capabilities directly to the officers’ hands. It improves officer safety by providing timely access to mission-critical information when and where it is needed. This purpose-built Android® application is designed to extend the PremierOne Mobile in-vehicle application beyond the confines of the car with personnel location tracking, queries, messaging, mapping, status monitors, and full Mobile dispatch functionality to deliver the intelligence officers need no matter where they are located.

UNLOCK YOUR POTENTIAL WITH SMART PUBLIC SAFETY SOLUTIONS

Only Motorola Solutions offers public safety organizations a complete, end-to-end portfolio of technology solutions that include radio and data infrastructure, dispatch consoles, mobile devices and powerful, integrated applications. This trusted portfolio provides advanced solutions that will position your department for the future – serving, protecting and empowering your community and your public safety professionals today and tomorrow.

WHEN LIVES ARE ON THE LINE, RELY ON THE SPEED OF INTUITION TO SIMPLIFY WORKFLOWS FOR EFFECTIVE INCIDENT MANAGEMENT - SO YOU CAN MAXIMIZE THE MINUTE.
