PREMIERONE MOBILE
ACCURATE AND INFORMED FIELD RESPONSE

PremierOne™ Mobile software enables public safety personnel to assess and prepare for a situation when dispatched, en route, and on the scene. Information becomes easily accessible, increasing situational awareness and improving field response.

First responders have access to real-time information from PremierOne CAD, PremierOne Records and local, state and federal databases. Users easily access information they need via a simple, one-step navigation experience throughout the PremierOne Mobile application enabling more informed decisions and quicker, safer, and more efficient resolution.
KEY FEATURES

Field Response: Utilize drive directions and dynamically receive incident details during critical response activity. As persons, vehicles and locations are added to an incident, previous incident details are instantly made available to officers. This intelligence is automatically surfaced as scenarios develop. Access to necessary information enables improved decision-making to execute a rapid and informed response to every call for service.

Incident Management: Enable full incident control and information sharing while in the field. Initiate an incident with a single touch and update event details, comments, and location. Additionally, scan a driver’s license to automatically search and add a subject or query a vehicle. Easily attach photos, video, and other multimedia from your devices for collaboration with other units and command staff. Empowering officers with tactical controls in the field enables a more autonomous and productive mobile workforce.

Enhanced Situational Awareness: Deliver mission-critical information into the hands of those who need it most — anytime, anywhere — for informed tactics and successful outcomes. Real-time updates and automatic notifications keep responders informed with alerts, “hot hit” responses, messaging, and BOLOs along with vital premise and hazard information. Enhance situational intelligence with geofencing and status monitoring providing location and activity details of all units and incidents to remain connected to developing situations as events unfold.

Windows, Android & iOS Clients: Mobility capabilities are designed to work on in-vehicle laptops, smartphones and tablets, or together across multiple devices for one seamless experience. Start responding to an incident in the vehicle and continue situational awareness outside of the car.

Intuitive User Interface: One-level access to information minimizes keystrokes to rapidly deliver information. Designed to distribute the right information to the right people at the right time. The client applications are designed for touch screen use in both a mobile computing and smartphone environment. Single key traffic stops, one touch status updates, and simple screen tap to drill down to incident or unit details are optimized for the Mobile workforce.

Streamlined Operations: Browser-based administration gives system admins the power to remotely configure clients, from a single portal, to match each agency’s unique operational needs. Android, iOS and Windows clients share the same provisioning information allowing a single set-up process for all platforms, eliminating duplicate efforts and streamlining support.

THE PREMIERONE PLATFORM
PremierOne Mobile application is your solution to optimize field operations and situational awareness for first responders. But, it’s also a part of something more. Conquer the complex public safety technology landscape with a proven platform designed to meet the unique needs of even the largest agencies. With on-premise and cloud deployment options, PremierOne is a robust offering that allows you to continuously build and grow as needed, and can be configured to your exact specifications while keeping everything secure and up-to-date.
