

EASING THE MANAGEMENT OF RECORDS AND MULTIMEDIA CONTENT

SMART PUBLIC SAFETY SOLUTIONS
TO FIT YOUR NEEDS

MOTOROLA SOLUTIONS

CREATING A SEAMLESS FLOW OF INFORMATION FROM POLICE OFFICER TO RECORDS SPECIALIST TO CORRECTIONS OFFICER

Your Records Specialists are responsible for many of the things that would go unrealized to most from the outside. Introducing new evidence into the system, maintaining existing records, fulfilling Freedom of Information Act (FOIA) requests, and disposing of records and evidence that have reached End of Life (EOL) is all time consuming but also incredibly important to maintaining a fluid operation.

Their job had been pretty routine. However the massive amount of digital information and multimedia that is now captured daily has led to staggering quantities of new data that must be collected, stored

and accounted for in retention and disposal schedules. Likewise the record rise in FOIA requests and the increased need for transparency have stretched available resources.

MORE DATA, MORE SYSTEMS, MORE PROBLEMS

Records Specialists must ensure this immense influx of digital evidence is uploaded from individuals across the organization as well from existing fixed resources in the field. And to be certain that these assets can be accessed later, it is critical that they be organized and easy to find. Systems must also be maintained and updated to regulate access and to address new policies and procedures.

To further complicate evidence retention, Records Specialists oftentimes navigate disparate systems that can create inefficiency. System updates are also needed regularly so the department remains secure and compliant, however one system's update can impair another's functionality — adding to the complexity.

Finally, requests for information, both internal and external, need to be addressed in a timely manner more than ever. This means prioritizing requests and executing them quickly and accurately to ensure transparency.

GAME ON

It was State vs. the U and the 60,000-seat stadium was packed. All of the emergency services in the area – police, fire and EMS – were ready for what promised to be a busy afternoon. During the event police were able to quickly resolve a lost child incident; an interstate accident and potentially dangerous hazmat situation was sorted out; and a possibly violent protest was kept peaceful.

Responses to incidents on game day were timely, appropriate and seamless. Multiple agencies – police, fire, EMS, public works and federal agencies – were able to work with citizens and each other, using smarter technologies, to keep fans focused on the game, not safety.

POST-EVENT DEBRIEFING

Afterwards, the Records Specialists received all incident details from the days activities and the video from fixed resources and all of the cars and foot patrols equipped with cameras. The photos and videos provided by

citizens involved in the interstate accident needed to be retained, and all the officer deployment plans created before and during the game needed to be saved.

The Records Specialists used CommandCentral Vault to securely store content and automatically correlate it to the department's PremierOne CAD and PremierOne Records systems – making it easier to locate later for further reporting or fulfillment of FOIA requests. They also used the application to track evidence handling to assure transparency and accountability, and evidence was tagged according to policies for various retention periods based on the type of incident.

Using PremierOne Records the Records Specialists ensured complete documentation and accuracy of reporting using modules to streamline workflows and the validation process of information. Due to new and historical data being centralized, the Records Specialist is able to expand the relationship map of the leader of the extremist group helping in the future to identify associations with other people, locations, property and vehicles.

A GREAT DAY AT THE GAME, CONCLUDED WITH QUICK, EASY PROCESSING OF ALL EVENT INFORMATION BY THE RECORDS SPECIALISTS

Those first responders and other supporting personnel who worked hard to ensure fans were safe at the game were able to get home to their families quicker without worrying about a headache of paperwork and reports to be filed thanks to:

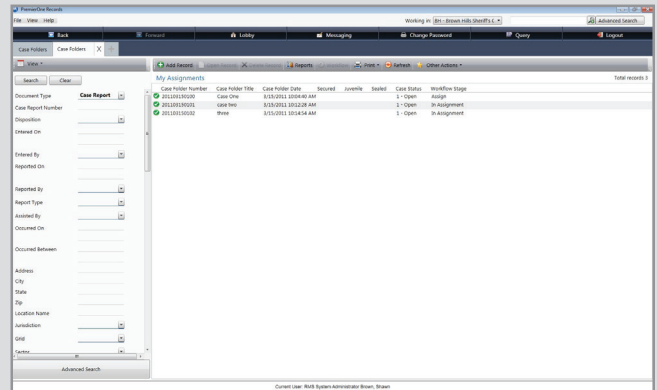

COMMANDCENTRAL™ VAULT

Using CommandCentral Vault, paired with the Si Series video speaker microphone, take a unified, simplified and smart approach to deploying a true end-to-end digital evidence management solution. Our cloud-based application is compliant with the CJIS Security Policy and designed to address many of the digital content storage challenges that may be increasing your administrative overhead.

Content collection from the Si Series device is seamless, with automatic, secure upload from pre-determined Wi-Fi hotspots and immediate correlation of media to the appropriate incident records. Review of content is simplified through four different commercial modules, each with specific permissions for different types of users. To minimize search time, content associated with a specific incident from various officers, dash cameras or fixed video resources can be viewed together. FOIA requests can then easily be fulfilled with smart tools such as geospatial search for video and automatic redaction after a request has been received through your custom citizen portal.

PREMIERONE™ RECORDS

PremierOne Records simplifies the capture, storage, securing and retention of operational and other procedural data with a single repository for advanced security, analytics and information sharing.

PremierOne Records ensures data integrity with class-leading security, auditing and logging functions that provide a chain of custody for all records. Create additional custom modules without large expenses or upgrade costs. Easily tailor data entry to match your business processes resulting in retrievable, viewable and sharable data across multiple agencies and jurisdictions.

Experience a lower total cost of ownership through more affordable deployment methods and reduced training needs with PremierOne Records.
