DLR SERIES
Quick Reference Guide

Models:
DLR 1020 – 2 channels
DLR 1060 – 6 channels

Frequency band:
ISM 900 MHz

Table of Contents:
1. Radio Overview
2. Battery – Insert and Charge
3. Basic Operations
4. Advanced Configuration
5. Special Call Features
6. CPS Software
7. Troubleshooting and FAQ
To insert or remove the battery, set the latch in the “unlocked“ position, and open the battery door. Remember to always set the latch back to the “locked” position in order to prevent battery from falling out by accident.
To charge a battery, insert the radio or a stand-alone battery into the single or multiple unit charger.

The light on the charger is red when the radio is charging. It turns to green once the radio is fully charged.

**Note:** Turn off the radio prior to charging. You don’t need to remove the holster to charge the radio.
DLR 1020/1060
Basic Operations

ON/OFF
Power Button – long press to turn the device ON/OFF, short press to check battery status.

PRIVATE REPLY
Press Top Button to queue up for Private Reply* (while someone is speaking to your channel), then push PTT to call the last person speaking.

VOLUME
[+] / [-] buttons – press to adjust volume

TALK
PTT (Push To Talk) Button – push firmly, wait for the TPT (Talk Permit Tone), speak into the mic (5 inches away from mouth)

CHANNELS
Channel/Menu Button – press to check the current channel. You can now use [+] and [-] buttons to switch channels. Press PTT to exit channel browsing.

Note: *Private Reply function is described here.
# DLR 1020/1060

## Advanced Configuration

The DLR Advanced Menu Mode allows you to configure special settings in your radio without the need for programming cables or additional software.

Advanced Configuration Menu

1. Profile ID Number – current value

The radio announces the current PROFILE ID number and prompts you to change it:

- Press [+] or [-] to enter the Profile ID number Sub-Menu.

“Current Profile ID: <Digit1, Digit2, Digit3, Digit4>; to change, press [+ or -]

Press Channel/Menu button to proceed to next Advanced Menu option.

ATTENTION: Default Profile ID number is “0000”! Make sure to change it to avoid interferences and ensure privacy.

Long press PTT to exit Advanced Menu Mode.
1. Profile ID Number – changing values

As you press the [+ or -, the radio will announce the first digit value and prompt you to change it:

- Press [+] or [-] to change the first Profile ID digit.
- Press Channel/Menu button to continue to the next digit.
- Long press PTT to exit Advanced Menu Mode.

"First digit <number>. To change, press [+] or [-]."

Note: Profile ID numbers to choose from: 0000 to 9999 – 10,000 possible combinations.
Advanced Configuration Menu

1. Profile ID Number – sub-menu

As you press [+ or -] to change the current digit, radio will announce the values.

“zero, one, two, (…), nine, zero…”

Once you set the last digit of the Profile ID Number with the Channel/Menu button, you will proceed to the next Advanced Menu option.

Note: You can move forward through the 4 digits, but not backwards.
1. Profile ID Number – modification confirmation

Once you've done setting the 4-digits profile number, the radio will confirm the new Profile ID value.

“Profile ID saved as: <digit1, digit2, digit3, digit4>. Press Menu to continue.”

Press Channel/Menu button to proceed to the next Advanced Menu option.

Long press PTT to exit Advanced Menu Mode.

**Note:** If you realize the number set is not the one you want, press the Menu/Channel button and go through the Advanced Menu options until you’re back on the beginning of the Profile ID option and repeat the steps.
2. Maximum Channels

The radio announces the current maximum number of channels and prompts you to change it:

“Max Channels <number>. To change, press [+] or [-].”

Press [+] or [-] to change the number of channels.

Press Channel/Menu button to proceed to the next Advanced Menu option.

Long press PTT to exit Advanced Menu Mode.

Note: The maximum number of channels you can set up depends on the radio model: DLR1060 – 6 channels; DLR1020 – 2 channels.
3. Top Button – current feature

The radio announces the current Top Button feature and prompts you to change it:

Press [+] or [-] to change the Top Button feature.

“Programmable Button <Top Button Feature>. To change, press [+] or [-].”

Press Channel/Menu button to proceed to the next Advanced Menu option.

Long press PTT to exit Advanced Menu Mode.

Note: The default function of Top Button is “Private Reply”.

Top Button
3. Top Button – sub-menu options

Use [+]/[-] buttons to browse the Top Button functions – you will hear their names read.

- Private Reply
- Direct Call*
- Call All Available
- Page All Available
- Mute

Press [+]/[-] to change the Top Button feature.

Press Channel/Menu button to proceed to the next Advanced Menu option.

Long press PTT to exit Advanced Menu Mode.

Note: In order to use the Direct Call option, you must first set it up using CPS software – otherwise, the top button will respond with a “bonk” sound.
DLR 1020/1060

Advanced Configuration Menu

4. MIC Gain

The radio announces the current MIC Gain setting and prompts you to change it:

Press [+] or [-] to change the MIC Gain level.

Press Channel/Menu button to proceed to the next Advanced Menu option.

“MIC Gain <MIC gain level>. To change, press plus or minus.”

Note: You can switch between Low/Medium/High gain settings. The default value is “Medium”.

Long press PTT to exit Advanced Menu Mode.
5. Home Channel

The radio announces the current Home Channel setting and prompts you to change it:

- **Profile ID Number**
- **Max Channel**
- **MIC Gain**
- **Top Button**

Press [+] or [-] to change the Home Channel setting.

"Home Channel <Home channel setting> to change press [+] or [-]."

Press **Channel/Menu button** to proceed to the next Advanced Menu option.

Long press **PTT** to exit Advanced Menu Mode.

**Note:** The options to choose from are “Disabled” or “Channel #” (or channel name, in case it has been set up via CPS). The default setting is “Disabled”.

As mentioned before, the Top Button can be configured to serve different functions:

**Special Call Features:**
- Private Reply
- Direct Call
- Page All Available
- Call All Available

**Mute:** instant mute function

**Disabled:** disables the Top Button

*Except for Private Reply and Mute, you can also assign special call features to a designated channel instead of the Top Button.

**Note:** Private Reply is the default Top Button function. Go to Advanced Functions Menu to learn how to change it.

**To set up Direct Call function for the first time (Top Button or specific channel), you will need to use the CPS. Learn more [here](#).**
Private Call feature allows you to talk privately to the person currently talking to a group after the group radio transmission is over. This allows to free the radio channel from unnecessary back and forward chatter.

This function engages the Top Button and the PTT button.

Note: Private Reply is the default Top Button function. Go to “Advanced Functions Menu” chapter to learn how to change it.
1. User A is talking to a group.

2. **You** want to talk privately to the User A (currently speaking). You push the **Top button** and hear a “**Private Reply**” prompt. The LED light begins to blink, and the private talk is in queue.

3. When the group talk is over, you push **PTT** – User A hears a “**Private”** prompt, and you start a private talk. Whenever they press PTT to reply back, they are talking privately and nobody else can hear them. The radio plays a distinctive **private TPT** (Talk Permit Tone) during the private talk.
1. User A is talking to a group.

2. **You** want to talk privately to the User A (currently speaking). You push the **Top button** and hear a “**Private Reply**” prompt. The LED light begins to blink, and the private talk is in queue.

3. When the group talk is over, you push **PTT** – User A hears a “**Private**” prompt, and you start a private talk. Whenever they press PTT to reply back, they are talking privately and nobody else can hear them. The radio plays a distinctive **private TPT** (Talk Permit Tone) during the private talk.
1. User A is talking to a group.

2. **You** want to talk privately to the User A (currently speaking). You push the **Top button** and hear a “*Private Reply*” prompt. The LED light begins to blink, and the private talk is in queue.

3. When the group talk is over, you push **PTT** – User A hears a “*Private*” prompt, and you start a private talk. Whenever you or User A presses PTT to reply back, you are talking privately and nobody else can hear you. The radio plays a distinctive **private TPT** (Talk Permit Tone) during the private talk.
DLR 1020/1060
Special Call Features – Private Reply

During the private communication, the LED on the Top Button illuminates a solid light.

If any of the radio users take too long to push the PTT button (10 seconds by default*), the private communication ends with a “Private Over” voice prompt on both radio, and LEDs go off – you are back in the normal group call mode.

If your request is not successful because, for example, another person’s private reply request has been queued first, the radio will give you a busy tone.

Note: *The length of inactivity period is called “Private Hang Time” and can be changed using the CPS.
A tip: How to apply **Private Reply** in your daily job

The use of this feature **reduces the need for phone extensions or cell phone calls** to talk privately.

Simply **call on the radio the name of the person** you want to talk to privately. When he or she responds to you, simply push the Private Reply button and then press the PTT to initiate the one to one private conversation.
The Direct Call Feature allows you to call one-on-one privately another **pre-determined user** that has been mapped into the radio Top Button (this feature needs to be pre-programmed*) or to any radio channel instead.

This way your radio can have Top Button available for other radio features (like Private Reply or Mute) and Direct Call set up in a special channel.

You can set up different direct calls in different channels.

*Note: To set up Direct Call function for the first time (Top Button or specific channel) you need to use the CPS. Learn more [here](#).
Special Call Features – Direct Call

Step by step

1. To talk directly to **User B** press Top Button*. Your radio plays voice prompt with the “**Private Name**” (as programmed in CPS, if enabled) and **top LED starts blinking orange**, showing you are in queue waiting to talk privately to User B.

2. Now, **Press PTT** to talk Privately to User B (who is NOT in a radio conversation). Both radios illuminate **solid orange**. Radio B hears radio voice prompt “**Private**” indicating there is a Direct Private Call in progress. **Radio plays a distinctive Private TPT tone**.

3. Whenever you or User B **presses PTT** to reply back, you will talk privately to each other. (Radio plays a distinctive Private TPT tone). Nobody else will hear you.

*Note: Top Button should be previously configured to Direct Call function and direct call User ID should be configured via CPS).

A tip: Why and how to use **Direct Call:**

Set up your employees to be able to contact directly and privately their supervisor, the Manager on Duty or to reach a designated person for special requests.

To make a Direct Call simply press the Top Button and then push the PTT button to talk.

If the Direct Call was set up in a specific channel, simple change to the Direct Call Channel and press PTT to talk privately.
DLR 1020/1060

Special Call Features – Call All Available

Call All Available allows to start a group transmission to anyone not engaged in a call. This creates a Group Call in a temporary “super channel group” with a 4-second group hang time. This means that anyone within this super group can respond by simply pushing the PTT – but after 4 seconds of inactivity the group will terminate.

This is in order to avoid all users to be tied up indefinitely in unnecessary group conversations.

In the picture →, the radio will create a “super channel group” consisting of all radios from channel A and C.

Note: This feature does not interrupt ongoing communications – only available groups are involved. Call All Available feature can be assigned to either the radio top button or a designated channel.
A tip: How **Call All Available** can be applied:

An employee in a retail store is trying to see if anyone took the backroom scanner.

He presses the Top Button, then the PTT button and asks: **“Does anybody know who has the backroom scanner?”**

>>> **Whoever is available** in any of the channels can **talk back to all the whole group** of users (who were tied up in the super-channel group call) and provide information.

**Note:** This feature does **not** interrupt ongoing communications – only available groups are involved.
This feature is useful if you have **more than 1 or 2 channels**. It allows the ability to communicate a message to all available radio users at once, without having to change through each channel individually.

Page All Available is a **one way group voice announcement** to all users in different channels, who are **not currently tied up in ongoing radio conversation**.

Receivers of Page All Available announcement can only reply with a Private Call.

In the picture →, a one-way announcement will be transmitted to all radios from channel A and C.

**Note**: *This feature does not interrupt ongoing communications – only available groups are involved.*
Example 1: An employee in a retail store is looking for anyone (in any of the group radio channels) who can come over to give him a hand in the back room. He presses the Top Button (or changes to Page All Available channel), then pushes the PTT button and says: “We need someone to come over to the warehouse to help unload the truck “.
> >> Whoever is available can Privately Reply him asking more details or confirming they are available .

Example 2: Anna needs to talk privately John and she is not sure in which channel to find him. It is cumbersome to browse all channels asking for John. She speaks in Channel #1 (assigned Page All Available) and asks: “John Smith, are you available ?”
> >> If John is available, he will reply privately (Top Button). If no response is heard, it means he is busy in another radio call or not within the range.
Customer Programming Software (CPS) allows you to program or change features in your radio. To use CPS, you need to download it from the internet and connect your radio with the computer using the CPS Programming Cable.

CPS software is available for free as web-based downloadable software at: [www.motorolasolutions.com/DLR](http://www.motorolasolutions.com/DLR)
