

BUILD A SCHOOL SAFETY ECOSYSTEM WITH TECHNOLOGY THAT FITS YOUR NEEDS

Communicate Without Boundaries: Motorola Solutions is Here to Support Safer Schools and Thriving Communities.

What is WAVE™?

WAVE offers instant, effective group communications between teachers, administrators, school staff, bus fleets and public safety. Inside a school building or anywhere with wireless broadband or Wi-Fi coverage, school personnel can communicate with radio users through the WAVE Broadband Push-to-Talk application. You can use the device and network you already have to communicate instantly with other radio users. WAVE PTT enables those on radios, smartphones, tablets and laptops to communicate seamlessly with one another. Easily share voice, text, photos, video and more with a group or individual at the push of a button – all from one PTT application.

School safety depends on interoperability between schools and first responders. With WAVE, gain access and coverage when you need it most.

BENEFITS OF WAVE PUSH-TO-TALK:

Expand your reach between any device on any network

Eliminate the barriers between devices, networks and locations.

Collaborate instantly with your staff in any situation

We are here to help support your school safety solutions with grant funding. Please contact your local AE for more information.

Choose WAVE as the right device for school safety and security. Learn more at www.motorolasolutions.com/education

“WAVE really expands the reach of our radios to other devices and networks. The app is very easy to use and the communication is very clear.”

Dr. André Harrison,
Superintendent, Elmore County Public Schools
