

# CommandCentral Responder for mobile dispatch

Real-time CAD incident details on the go.

Every call demands immediate action. Responding officers need critical information, fast. CommandCentral Responder provides this by extending your supported Motorola Solutions computer-aided dispatch (CAD) system to officers in the field. Real-time incident details and updates are available on their iOS or Android mobile devices and Apple CarPlay®. No longer tethered to vehicles or tying up radio channels, officers can stay informed, react swiftly and make more informed decisions from the field.

### Get real-time intel anywhere

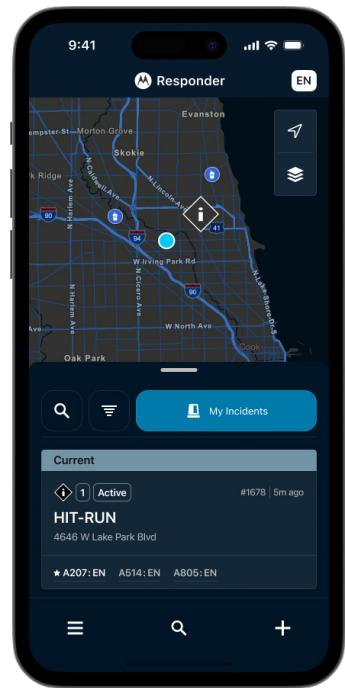

Access critical CAD data—incident details, unit locations, involvements and premise hazards—directly on your mobile device. While en route, stay informed and updated on your incident with hands-free voice commands and turn-by-turn navigation, available via Apple CarPlay®, Windows and Android.

### Manage incidents from the field

Take control of incidents directly from the scene. Using your mobile device, you can initiate, update, self-assign and close incidents in real time. Monitor unit activity, view data from neighboring agencies and improve coordination and response times from any location.

### Extend your CAD investment

CommandCentral Responder is more than just a mobile app. It's a direct extension of your agency's PremierOne, Flex or CommandCentral CAD investment, putting critical information and functionality right in the palm of your officers' hands.

# Key features

## → Effortless status management

Instantly view your current status and update it with a simple tap, ensuring dispatch always has accurate real-time awareness of your availability.

## → Comprehensive incident overview

Gain immediate situational awareness with a clear display of incident nature with modifiers, incident details, priority, address and units assigned, all conveniently located alongside responding unit positions on an integrated map.

## → Real-time communication hub

Stay informed and contribute vital information by easily reading and updating CAD and priority comments directly from your mobile device or in-vehicle computer.

## → Enhanced safety and awareness

Proactively mitigate risks with instant access to premise hazard information, including key information known for that location like gate codes, persons or animal notifications, and critical location alerts.

## → Actionable contextual data

Quickly identify potential connections and threats with readily available details on persons and vehicles associated with the active incident.

## → Apple CarPlay® integration

Access critical mobile dispatch features directly through your vehicle's infotainment system using Apple CarPlay®. With voice commands, update your incident safely and hands-free, leading to quicker response times.

# Part of a public safety dispatch ecosystem

CommandCentral Responder is a mobile companion application available to complement Motorola Solutions dispatch tools. By pairing CommandCentral Responder with PremierOne, Flex or CommandCentral CAD, we're helping responders quickly get where they need to be with as much information as possible to make informed decisions while in the field. When everything works together, responders can focus on the incident, not the technology.

Extend your CAD investment to the field by subscribing to the CommandCentral Responder mobile app, available from Google Play or Apple App Store.
