

SEAMLESSLY TRACK AND MANAGE YOUR COMMUNICATIONS EQUIPMENT

ASSET MANAGEMENT

Tracking radio communications assets is a daunting task. Equipment is distributed to hundreds of individuals. Radios are shared by many resources or re-allocated between agencies. If equipment needs to be brought in for repairs or replacement, you need to know all of the relevant information associated with the radio to make the most cost-effective decisions: its history, the warranty date, software version, the assignee, repair record, etc.

IMPROVE ACCOUNTABILITY

You have made a significant investment in your radios and equipment. But, how well do you know the status of all that equipment once it is deployed? You need a comprehensive solution for the maintenance and management of your communications assets. Ideally, your tracking application should include:

- A centralized tracking database that can be accessed from any device to manage all of your issued equipment and parts
- An easy-to-use work ticket creation process for issuing and scheduling repair activities
- A method of tracking assets and parts inventory, including notifications of low inventory levels
- A built-in dashboard application that allows you to quickly view radio performance metrics
- Standard and custom reporting capabilities to report on maintenance history and costs

Having the right equipment in the hands of users at the right time is vital to running a smooth operation.

With Asset Management, you can close the gap in your maintenance cycles and streamline your communications asset management process.

INCREASE VISIBILITY AND ACCURACY

Asset Management is a commercial off-the-shelf (COTS), HTML5-based solution that centralizes asset-tracking and manages workflow, inventory, and reporting processes involved with maintenance activities. It can be accessed via a web-browser or mobile device for full functionality online or offline.

The solution is easily deployed throughout your organization. The centralized tracking database provides up-to-date asset information. Searching and reporting capabilities are quick and easy. The system also streamlines the repair and maintenance process to improve operational response. By centralizing radio equipment data and maintenance management, you have the tools to maximize the lifecycle of your communication assets.

FEATURES AND BENEFITS OF ASSET MANAGEMENT

FEATURES	BENEFITS
Robust tracking capabilities	<ul style="list-style-type: none"> • Provides a centralized database to store all communications inventory • Tracks asset attribute information such as location, assignment, warranty information, cost, etc. • Enables quick and efficient searching and reporting capabilities • Provides easy-to-use work ticket creation process as well as maintenance history and costs • Offers a built-in spare parts tool to track inventory and material usage
Easy-to-use interface	<ul style="list-style-type: none"> • Increases overall efficiency of radio maintenance processes • Enables user to quickly search and find asset information
Web-based solution	<ul style="list-style-type: none"> • Only a browser is needed to access the system • Intranet capable, available to remote users
Barcoding and RFID capabilities	<ul style="list-style-type: none"> • Simplifies the tracking of assets and parts inventory
Dashboard capabilities	<ul style="list-style-type: none"> • Generate a quick assessment of radio management performance metrics
Preventive Maintenance (PM) flexibility	<ul style="list-style-type: none"> • Provides flexibility of tasks based on a fixed date, flexible time period or metered usage • Supports automatic work ticket creation
Enterprise asset management tool	<ul style="list-style-type: none"> • Expandable beyond radio maintenance • Helps improve operations and performance • Flexible configuration to fit for your needs
Geographical Information System (GIS) mapping software module	<ul style="list-style-type: none"> • Spatially locate assets and conduct maintenance
Mobile Application	<ul style="list-style-type: none"> • Device and operating system agnostic • Online and offline functionality • Integrated barcoding and RFID scanning

STREAMLINE YOUR OPERATIONS FOR GREATER ORGANIZATIONAL EFFICIENCY

At Motorola, we offer the experience, expertise, quality, and implementation capabilities you have come to expect to support your mission critical communications. Asset Management helps you proactively manage your communications infrastructure and devices, analyze information associated with these assets and schedule preventive and reactive maintenance activities in an efficient and cost effective manner. Our solution is one of the most highly deployed web-architected asset management systems in

the world, and expands as needed to other infrastructure assets you may be managing, maximizing the value of your investment in an asset management solution.

Whether you are self-maintained or coordinating out-sourced maintenance activities, Asset Management provides everything you need to effectively manage and track your radio equipment optimizing the lifecycle of these essential communications tools.
