PROTECT

MOBILE INTELLIGENCE

Disseminate more actionable intelligence, faster, from videos, graphics, and other data to personnel for identity verification and threat detection.

CONVERGED SECURITY & INFORMATION MANAGEMENT

Use the right combination of information sources and advanced analytics to accurately verify the identity of anyone seeking access to your physical locations or information systems. Manage access control systems remotely and automatically trigger cyber security protocols.

UNIFIED CRITICAL COMMUNICATIONS

Those tasked with interdicting threats and avoiding disruptions to your operations receive continuously updated critical information regardless of the network, application, or device they use.

RESILIENT NETWORKS

Continuous network monitoring and security patching of radio communications infrastructure safeguards the availability and security of all voice communications.
