RECOVER

MOBILE INTELLIGENCE

Personnel responsible for recovering infrastructure and systems can now mobilize their operations, accessing workflows across applications and devices. Provide health and social services faster with advanced technologies that efficiently deliver the most relevant information to the right agency personnel.

CONVERGED SECURITY & INFORMATION MANAGEMENT

Now, operations can continue while affected systems are down or physical locations inaccessible. A pre-programmed rules engine ensures the entire range of integrated systems are able to efficiently execute disaster recovery operations as specified in your COOP plan. After a downed system has been restored, but before it's fully reintegrated in the converged platform and the redundant infrastructure is disconnected, detailed reports ensure everything is operating at peak performance.

UNIFIED CRITICAL COMMUNICATIONS

Connect service providers with corresponding agency operations personnel over any network, application or device to recover damaged systems. Use any device to issue mass notifications and connect personnel across departments as recovery procedures are executed.

RESILIENT NETWORKS

24/7 Managed Support Services ensure all affected systems and infrastructure are fully operational once repairs have made. Then, continuous network monitoring ensures peak performance is maintained, while continuous support ensures new issues are quickly addressed.
