

Journey management

Use case

Connect

Across vast networks

For team members travelling through remote locations, communications are paramount for their safety. With Broadband PTT they can stay connected with a simple smartphone app or dedicated Motorola Solutions radio hardware.

Respond

Instant connection for fast response

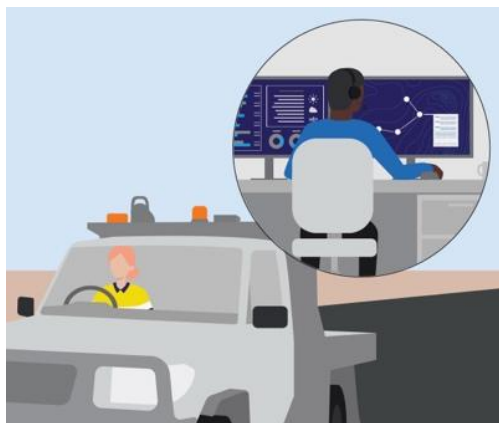

Drivers are connected with dispatch providing journey management. In unforeseen incidents, drivers can raise an alert, connecting instantly to response teams. Where drivers cannot raise the alarm, live data allows journey managers to spot issues and direct a response.

Communicate

Seamlessly share information

Dispatch can share critical live information, such as weather, road and journey updates, and respond to issues in real time. The LTE handheld device can adapt to existing systems for seamless integration.

Manage

Constant support for the team

Location and mapping of drivers, including geofencing, enables effective journey management. Talkgroup scanning allows dispatch to monitor certain drivers and assign priorities.
