

GAIN AN INDEPENDENT WITNESS WITH BODY-WORN CAMERAS

THE VB400 FOR SECURITY PROFESSIONALS

THE VB400 BODY-WORN CAMERA SOLUTION

AN ESSENTIAL TECHNOLOGY FOR PROFESSIONAL SECURITY OPERATIONS.

Workplace violence is on the rise, bringing with it greater demands of security professionals.

Often on the front line in corporate offices, retail outlets, hospitals and schools, they are responding to increased incidents of aggression. Those who don't feel safe at work are more likely to leave the company, utilize employer healthcare services at a higher rate, or bring insurance and legal claims against their employer when a safety incident occurs. Providing a security professional's perspective of an incident when they are required to use force to protect themselves or the property they are responsible for is more critical than ever.

The VB400 body-worn camera is designed for security professionals who may encounter threats of violence. With its rugged exterior and shift-long recording, the VB400 provides footage of events as they occur, allowing immediate response and providing indisputable evidence.

INCREASE THE SAFETY OF THE PUBLIC AND SECURITY PROFESSIONALS THEMSELVES

Body-worn cameras are proven to minimize verbal and physical attacks, as people's behaviors change when they know they are being recorded.

Serving as an independent witness, video evidence helps to resolve complaints and disputes by providing transparency and protecting security professionals from false accusations. Employers who provide body cameras as part of an employee health, safety and accountability program find success in reducing the negative impact of workplace violence as well as mitigating risk of litigation.

RUGGED AND INTUITIVE DESIGN

Focus on the job and not on the weather. The toughened exterior of the VB400 resists rain, snow and dust. Tested to military standards, the result is a body-worn camera that works when you need it. The large central button and robust side switch are positioned for easy operation, even when wearing gloves.

HIGH QUALITY VIDEO

In instances where footage is required for evidence, the camera's wide angle, 1080p HD lens captures high-quality video from the wearer's viewpoint - providing accountability, protecting people and proving professionalism. And, with an array of accessories, security professionals can attach the VB400 to any uniform or clothing.

PRE / POST-RECORDING

Context is vital. With pre / post-recording enabled, capture important interactions leading up to and after the main event. Pre / post-record captures a continuous loop of audio and video, providing up to two minutes of recording ahead of and after the record function has been activated.

LONG BATTERY LIFE

Capturing interactions can mean the difference between conviction and acquittal. With a recording time of up to 12 hours on a single charge - the VB400 enables better protection for security guards who may be working alone for extended periods of time.

A man with short brown hair, wearing a dark grey suit, white shirt, and a grey and blue striped tie, is holding a black radio with a long antenna. He is looking off to the side with a focused expression. The background is a blurred office interior with wooden paneling and a window showing greenery outside.

RESPOND TO SECURITY INCIDENTS IN REAL-TIME WITH INTEGRATED TECHNOLOGY

Communication between technologies is critical to facilitate a quick, collaborative response to a security incident and potentially avoid unnecessary escalation. With multiple ways to connect, the VB400 enhances security professional safety by bridging the gap between them and the rest of the security team - enhancing situational awareness, and enabling a coordinated, smarter response.

PEER-ASSISTED RECORDING

When a situation escalates quickly, a security professional may not have a chance to hit the record button. Peer-Assisted Recording (PAR) automatically activates colleagues' VB400 cameras when they come into range, capturing multiple viewpoints of the same incident.

LIVE STREAMING

Integrate with Avigilon Control Center (ACC) and other VMS systems, so user-activation of a body camera recording can display the camera's live video feed and send an alarm to the system operator alongside video feeds from fixed cameras. This enables security personnel to gain complete situational awareness and respond accordingly.

HOLSTER ACTIVATION

The Holster Aware™ Sensor enables security professionals to remain focused, even in the most stressful moments. Attached to holsters, it can detect whether a conducted energy weapon, baton, chemical agent, or firearm has been removed from a holster and notify the VB400 body-worn camera to activate recording.

RADIO INTEGRATIONS

If paired with select radios over Bluetooth, the VB400 can automatically record when the user's radio enters an "emergency state", when the user presses the radio's emergency button, and when the radio's man down sensor detects the user is down.

CONFIDENTLY PROCESS AND SHARE EVIDENCE WITH LOCAL LAW ENFORCEMENT

VideoManager is a fully customizable device and digital evidence management solution. It lets you prepare, process and share high-quality video evidence from your suite of body-worn cameras.

All footage captured by VB400 cameras is securely offloaded to VideoManager, and can be accessed by authorized personnel by securely logging in from any computer or tablet connected to the network. It also provides links for secure sharing with external agencies for seamless collaboration.

VideoManager provides the ability to assign user profiles, meaning granted permissions within the system can be controlled by role. For additional security, audit logs let you track every user action, ensuring traceability and transparency. Two-factor authentication protects against unauthorized user access while access control keys stop unauthorized devices from connecting to the system.

A DAY IN THE LIFE WITH THE VB400

STARTING AND ENDING A SHIFT

The security professional scans their RFID card at the start of their shift. The VideoManager system assigns a VB400 body-worn camera to the security professional, which identifies itself in the docking station with a solid red LED. From this point on, all footage captured on the VB400 will be assigned to the security professional. The security professional wears the VB400 throughout their shift attached to a chest or shoulder harness.

At the end of the shift, the security professional returns the VB400 to a docking station. All stored footage is securely offloaded to VideoManager, and erased from the camera. The VB400 is un-assigned from the security professional, and its battery is charged.

RESPONDING TO AN INCIDENT

If the security professional becomes involved in an escalated situation that cannot be quickly resolved, they warn the member of the public that they are activating their body-worn camera. When the security professional presses the power/record button on the camera, the VB400 vibrates, indicating it is recording. Optionally it can trigger an alert at the security center and stream video over Wi-Fi® to VideoManager or a VMS.

With a press of the bookmark button on the camera, the security professional marks a specific moment of footage as 'important'. If the security professional is approached by a colleague who is also wearing a VB400 camera which has been approved by their employer to utilize Peer-Assisted Recording, the device is activated, providing a second viewpoint of the incident.

Footage can be tagged as evidence for future use or for training purposes. It will be retained as an 'incident' and all other footage will be systematically deleted as required. Incidents can be audited centrally, and securely shared.

INCIDENT INVESTIGATION

The security professional's bookmarked footage is offloaded right away, to be reviewed by an authorized user ahead of the other recordings that are stored within the VideoManager software system.

Optionally, the footage can be reviewed on the VMS system, alongside associated footage from fixed security cameras.

Should further evidence be required, administrators of the VideoManager software will be able to review the footage captured on the security professional's camera just before or after they hit record, thanks to the pre / post-record function initiated on their VB400.
