SMART LOCATE

TRACK YOUR LOCATION WITH PINPOINT ACCURACY

ROUTE APX NEXT™ LOCATION INFORMATION OVER BROADBAND, FOR FAST UPDATES, EASY SCALABILITY AND RAPID DEPLOYMENT.

DETAILS
A radio's GPS location information is usually sent to the dispatcher over a data channel on the radio network. Continuous innovation has improved accuracy and availability, but the narrowband data system imposes limitations. SmartLocate overcomes these limitations by routing the location information over broadband networks.

BENEFITS
- Fast Updates: Location updates can be sent more frequently (maximum: 1 update every 3 seconds). Dispatchers can now track officer locations with improved accuracy, especially during fast-moving situations.
- Easy Scalability: Location-tracking is not now limited by the capacity or availability of your P25 data channels. An entire fleet of radios can be tracked with no impact to the radio system.
- Rapid Deployment: Because no advance provisioning is required, new individuals and teams can be added to the system at a moment's notice.

SmartLocate is seamlessly integrated into CommandCentral Aware, giving dispatchers a clear view of all personnel and their locations.

APX NEXT radios can be configured to send location updates either over P25 (standard) or broadband LTE/WiFi (SmartLocate), but cannot dynamically switch between the two modes.

COMPATIBLE PRODUCTS
APX NEXT

DEPENDENCIES
To map device locations, a license for CommandCentral Aware is required.

INFRASTRUCTURE IMPACT
None

SECURITY
End-to-end: Location data is encrypted from the radio all the way to CommandCentral Aware.

DELIVERY
SmartLocate is purchased as an application service and is charged per radio per month. Please speak with your account executive to learn about other available plans.

HIGH SPEED PURSUIT
When officers are in pursuit of a suspect, they rely on dispatchers to monitor the situation and ensure the safety of the operation. SmartLocate pushes accurate GPS updates every three seconds – making it easy to see exactly where everyone is located at all times. In addition, integration with CommandCentral Aware enables dispatchers to map all units and direct the operation to a safe conclusion.

DISASTER RELIEF
Following a devastating storm, neighboring rescue teams are dispatched for assistance. SmartLocate enables easy scaling of your radio system to handle all positioning data for the additional personnel – helping to seamlessly coordinate the response using the CommandCentral Aware map.

NATIONWIDE LOCATION-TRACKING
A suspect is heading into a valley where radio coverage is patchy. But because SmartLocate uses LTE, your dispatcher can continue to monitor the locations of all your officers - even beyond the radio network.
