

USE CASE

MACHINE MONITORING & ALERTS

Safe Manufacturing

Operational View

DETECT

MACHINE ALERT ACTIVATED

Machine failure alert on production line automatically triggers an alert to the line supervisor.

ANALYZE

PRODUCTION MONITORED

Operational staff use cameras to monitor the situation and evaluate how the issue is affecting overall production.

COMMUNICATE

NOTIFICATION COMMUNICATED

After initial alert, the line supervisor creates work order ticket for maintenance and communicates directly with the plant manager. An All Call notification is sent to other departments notifying them of a production delay.

RESPOND

ISSUE RESOLVED MINIMAL DOWNTIME

Maintenance replaces a part during the next shift change to prevent breakage. Work order ticket closed.
