

# USE CASE WORKER DOWN

Safe Manufacturing

## Operational View

### DETECT

#### WORKER DOWN ALERT

Man Down feature on radio detects a fallen worker in remote area of the plant and automatically sends an alert over the radio network to security and operations.

### ANALYZE

#### REAL-TIME VIDEO VERIFICATION

Control room operator receives the emergency alert, verifies the location of the worker and uses live video to evaluate and monitor the circumstances of the incident.

### COMMUNICATE

#### NOTIFICATION COMMUNICATED

Based on defined protocols, the plant emergency response team is dispatched to assist the worker and investigate using real-time location data.

### RESPOND

#### FIRST RESPONSE DISPATCHED

On-site or local first responders arrive to provide medical attention. An incident is logged with pre-populated fields and relevant data for analysis and claims

## Technology View

### DETECT
