

Engage mobile

The confidence of total connection, in the palm of your hand.

You've probably experienced it — sending a high-priority update only to have it buried under a mountain of junk mail, unmanaged chats or unreliable SMS. Whether it's a routine operational change or a sudden critical event, "one-way blasts" often leave you in the dark. You're left to hope for the best without any real-time data on who has seen the information or who needs help.

Engage is the dedicated mobile companion to the Motorola Solutions Resilience Platform, designed to be a secure, authenticated home for your most important messages, keeping time-sensitive information front-and-centre rather than lost in a cluttered inbox. You don't just send a message; you gain instant situational awareness by allowing your team to respond and check in with a single tap. It's the simplest way to extend your organisation's resilience strategy to every mobile device.

Your messages, front and centre

Cut through the daily digital noise so your people stay informed and focused on what matters.

Real-time connectivity, everywhere

Move your communication away from high-risk legacy systems to a platform you can rely on globally.

Get instant feedback from your people

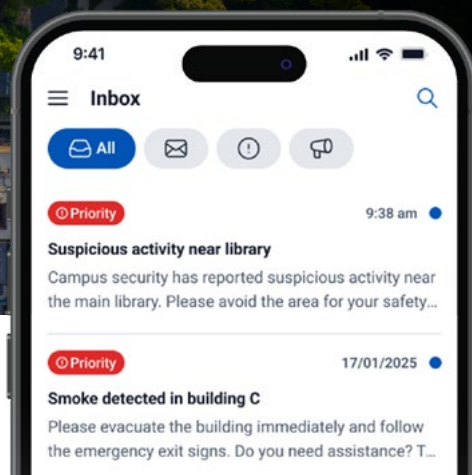

Transform messages into actionable data with interactive buttons that provide instant situational awareness from the field.

Security that meets enterprise standards

A secure, auditable environment that protects both your people and your organisation.

MOTOROLA SOLUTIONS

Key features

Reach the right people instantly

Targeted push notifications allow you to send alerts directly to specific, predefined groups, getting the right information to the right people.

Deploy smarter, location-aware safety

Automatically trigger alerts when someone enters a hazard zone, visualise who is in the area during an emergency and grab a GPS snapshot when a user calls for help, so you can get resources moving faster.

Respond with a single tap

Customisable response buttons help users quickly check in or ask for help, giving managers instant situational awareness without the need for back-and-forth messaging.

Clearer instructions with rich media

Support for rich content means you can send more than just text, including maps, images and safety instructions so everyone knows the next steps to take.

Simple, secure access

SSO authentication uses your existing enterprise credentials, so there are no new passwords to remember and your data stays protected.

A personalized user experience

Accessibility and UX controls like Light/Dark mode and custom date formatting make the app comfortable and easy for every employee to use.

Plan for what's ahead.

The Motorola Solutions Resilience Platform

Built as a direct extension of the Motorola Solutions Resilience Platform, Engage turns information into action. It automatically tracks alerts and responses within your existing workflows, delivering instant situational awareness and real-time accountability. By bridging your central resilience strategy with end-user mobile devices, Engage creates a unified, auditable environment for a synchronised global workforce.
